

## Index

**Bold type indicates where a topic is given special consideration: GL indicates mention in the Glossary.**

Text figures are indicated by a page number and asterisk: the figure numbers are not given. *Passim* signifies 'scattered throughout'. Photographs are referred to at the end of each entry by their individual plate numbers: thus Pls. 21, 32 . . .

English plant names have usually been given their Latin equivalents in brackets: indexed Latin names, however, are not accompanied by their English equivalents. Both Latin and English name entries carry the same page references. In general plant names in the text figures, legends and tables have not been included.

The positions of all the more important sites and waterways are shown in the text figures cited in the index; grid-references, however, are given for many of the less familiar localities referred to, especially those in the Somerset Levels.
