Contents

Preface *page* vii

1 **The mineral world** 1
Mineral: A definition 1
Minerals on Earth 5
Minerals in the universe 7
Mineralogists and mineralogy 9

2 **Crystal realms** 13
The crystalline state 13
The study of crystals through the ages 15
X-rays and crystal structure 23
The physical properties of crystalline solids 25

3 **Mineral chemistry** 35
Chemical elements and compounds 36
Mineral formulas 43
The naming of minerals 49
The formation of minerals 51
Mineral occurrences 53

4 **Rocks** 55
Rock: A definition 56
Rock components 57
The classification and naming of rocks 61
Rock origins 62

5 **Soils, dusts, and muds** 77
Weathering 79
Soils 81
Movement of the regolith 85

Table of Contents
More information

6 Ores and ore minerals 96
Kinds of resources 97
Ore minerals 99
Metallic ore deposits 101
Nonmetallic ore deposits 111
Energy resources 115
The future 116

7 Building materials 120
Building stones 121
Rock products 130
Some famous structures 136

8 Rocks and minerals in diverse environments 138
Plate tectonics 138
The rock cycle 147
Epilogue 149

Appendix 1 Chemical symbols and the periodic table 151
Appendix 2 Identification of the common rock-forming minerals 154
Appendix 3 The identification of rocks 158
Index 165
