CONTENTS

Preface	v
1 Introduction	1
2 The theory of membrane potentials	8
2.1 General relationships	8
2.2 The Nernst and distribution potentials	11
2.3 The Donnan potential	14
2.4 The structure of the phase boundary between two immiscible electrolytes	15
2.5 The kinetics of charge transfer across the phase boundary between two electrolytes	18
2.6 Diffusion potential	20
3 The theory of membrane potentials in ion-selective electrodes	27
3.1 Basic concepts	27
3.2 Membranes with dissolved ion-exchanger ions	30
3.3 Membranes with a neutral ion carrier (ionophore)	39
3.4 Membranes of solid and glassy materials	45
4 Principal properties of ion-selective electrodes	56
4.1 Construction of ion-selective electrodes	57
4.2 Ion-selective microelectrodes	65
4.3 Ion-selective field-effect transistor ISFET	68
4.4 Composite systems	71
4.5 Calibration of ion-selective electrodes	72
4.6 Selectivity coefficient	77
4.7 Response time	78
4.8 Temperature coefficient, drift and life-time	81
4.9 Ion-selective electrodes in non-aqueous media	82
5 Experimental techniques	89
5.1 Principal conditions for correct measurement with ISEs	89

<i>Contents</i>	<i>iv</i>
5.1.1 Sample preparation	89
5.1.2 Adjustment of the experimental conditions	91
5.1.3 Requirements of the measuring system	93
5.2 Discontinuous potentiometric measurement	95
5.2.1 Determination of activities	95
5.2.2 Determination of concentrations using calibration curves	95
5.2.3 Addition techniques and potentiometric titration	99
5.2.4 Various modified techniques and automation of discontinuous measurements	109
5.3 Measurements in flow systems	110
5.3.1 Continuous monitoring	113
5.3.2 Titration techniques in flowing solutions	117
5.3.3 Analyses of discrete samples in flow systems and chromatographic detection	120
5.4 Specific features of ISE application in clinical analysis	124
6 Ion-selective electrodes with solid or glassy membranes	131
6.1 Ion-selective electrodes for halide ions	131
6.2 The sulphide ion-selective electrode	137
6.3 Electrodes containing divalent metal chalcogenides	140
6.4 The lanthanum trifluoride ion-selective electrode	144
6.5 Glass electrodes	149
6.6 Various other systems	156
7 Ion-selective electrodes with liquid membranes	168
7.1 Basic properties of membrane systems	168
7.2 Calcium and related electrodes	181
7.3 Ion-selective electrodes for nitrates, other oxygen-containing ions and tetrafluoroborate	185
7.4 Ion-selective electrodes for potassium and other monovalent cations	186
7.5 Other systems	188
8 Potentiometric biosensors	195
8.1 Enzyme electrodes	196
8.2 Other biosensors	198
9 Voltammetry at the interface of two immiscible electrolyte solutions	202
Appendix	211
Index	215

PREFACE

The second edition of *Ion-Selective Electrodes* contains a survey of the theory and applications of ion-selective electrodes based on the literature published up to mid-1981. Because of the rapid progress in the whole field and the very large amount of diverse data, a compact and unified treatment of the theory has been attempted. The technology and the applications have also been updated. In view of these facts we have had to write practically a new book. In contrast to the first edition, only a selective list of references could be included in the book, because otherwise we would have to deal with more than four thousand references.

We are grateful to our colleagues Professor J. Dvořák (Faculty of Science, Charles University, Prague), Dr J. Bureš (The Institute of Physiology, Czechoslovak Academy of Sciences, Prague), Dr J. Veselý (The Geological Survey, Prague) and to Dr Z. Samec (The J. Heyrovský Institute of Physical Chemistry and Electrochemistry, Czechoslovak Academy of Sciences, Prague) for valuable suggestions during the preparation of both editions of the book. The Czech manuscript has been translated into English by Dr M. Hyman-Štulíková. We would also like to thank Dr A. Kejharová, Mrs M. Kozlová, Mrs D. Tůmová and Mrs L. Korytová for their help with the preparation of the manuscript.

We wish to express our gratitude to the following authors and organizations for kindly permitting us to reproduce figures from their publications: Professor J. N. Butler, Dr W. L. Duax, Dr B. Fleet, Professor G. G. Guilbault, Professor P. Läuger, Dr G. Mattock, Dr L. Pioda, Professor G. Rechnitz, Professor W. Simon, Professor K. Sollner, Professor M. Truter, Professor D. W. Urry and Professor R. J. P. Williams, The American Association for the Advancement of Science, the American Chemical Society, M. Dekker, Inc., New York, The Orion Research Corporation, Inc., Cambridge, Mass, and the Society for Analytical Chemistry.

Prague, May 1982
