

## INDEX

- acetylcholine, determination of, by  
 voltammetry at ITIES, 207, 208
- acetylcholine ISE, 186–7
- activity determination, 95
- activity scales, 73–6, 95
- addition techniques, 99–103
- adsorption effects, 93
- ammonium ISE, 187
- amygdalin ISE, 197
- analyte addition method, 101–3
- analyte subtraction method, 101–3
- antibiotic A 23187, 177, 181, 183
- antibody–antigen reaction, 139–140, 199
- automation, of potentiometry, 110
- bacterial electrode, 198–9
- barium ISE, 181, 184–5
- biosensors, 195–9
- bromide ISE, 135–6
- Butler–Volmer equation, 18–19
- cadmium ISE, 141
- calcium ISE, 168–9, 181, 183–4
- calibration, of ISE, 72–7  
 curve, 95–9
- carbonate ISE, 186
- cell membrane potential, ISE measurement, 188
- cell reaction, 9–10
- cesium ISE, 188
- CFA, *see under* continuous flow analysis
- chalcogenide glass electrode, 155
- chiral ligands, in ISE, 188
- chlorate ISE, 186
- chloride ISE, 135  
 liquid-membrane, 188
- chromatographic detectors, 111–2, 123–4
- chronopotentiometry, at ITIES, 205, 207
- clinical analysis, ISE application in, 124–6
- coated-wire ISE, 64
- constant interferent concentration method,  
*see under* mixed solution technique
- continuous monitoring, 113–7
- continuous-flow analysis, 120–3
- copper ISE, 142–3
- cyanide ISE, 136  
 theory, 50–2
- Debye–Hückel equation, 73
- detection limit, 32, 47, 98
- differential pulse polarography, ITIES, 207
- differential measurement, 109
- diffusion potential, 20–5, 29, 37, 45–6
- direct potentiometry, 95–9
- dissolution of membrane, 82
- distribution potential, 13–14
- divalent cation ISE, 184
- divalent metal chalcogenide ISE, 140–1
- Donnan potential, 14–15, 25, 94
- double addition method, 103
- double-barrelled ISM, 67–8
- drift, of ISE potential, 82
- dropping ISE, 62
- Einstein–Smoluchowski equation, 19
- electric double layer, 15–17
- electrolyte dropping electrode, 204–6
- electromotive force, *see under* EMF
- EMF, definition, 9
- enzyme electrode, 195–8  
 in flow systems, 122
- enzyme reactor, 195
- FIA, *see under* flow injection analysis
- flow injection analysis, 120–3
- flow systems, 110–14
- fluoride ISE, 144–8  
 applications of, 147–8
- four-electrode potentiostat, 202
- Frenkel mechanism, 131–2

- Galvani potential, 9  
 gas probe, 71–2  
 Gibbs transfer energy, 12–14, 30, 33, 37, 41, 169  
   determination of, 149  
 glass electrode, 149–55  
   alkali metal determination with, 149–51  
   pH determination with, 149  
   theory of, 151–5  
 glass microelectrode, 66  
 Gouy–Chapman theory, 17  
 Gran method, 106–8  
 graphite paste ISE, 64
- halide ions, ISE for, 131–7  
   construction, 133–4  
 Henderson equation, 23–5, 37  
 heterogeneous membrane, 59–60  
 homogeneous membrane, 58–9  
 HPLC, 123  
 hydrogen ISE, 188
- immunosensor, 199  
 inner potential, 8–9  
 interface of two immiscible electrolyte solutions, *see under* ITIES  
 internal metal contact, 64–5  
 iodide ISE, 136  
 ion-exchanger membrane, 29, 57  
 ionic strength adjustment, 91  
 ionophore, 39–45, 170–5, 177–81  
   determination of, by voltammetry at ITIES, 209  
 ion-pair, 34–5, 38–9, 40–1, 168–9  
 ion-selective electrode, *see under* ISE  
 ion-selective field effect transistor, *see under* ISFET  
 ion-selective microelectrode, *see under* ISM  
 ISE, advantages, 57  
   calibration of, 72–7  
   construction of macroelectrodes, 57–65  
   definition of, 56–7  
   electric double layer at, 15–17  
   history of, 3–4  
   in non-aqueous media, 82  
   potential, 27–52  
 ISFET, 4, 8, 10, 68–71  
   applications of, 71  
   in clinical analysis, 124–8  
 ISM, construction of, 65–8  
 ITIES, 13–14  
   charge transfer kinetics at, 18–19  
   electric double layer at, 15–17  
   voltammetry at, 202–9  
   applications of, 208–9
- known addition technique, 99–101  
 known subtraction technique, 99–101
- lanthanum trifluoride, properties, 144–5  
   ISE, 144–8  
 lead ISE, 141  
 Lewis–Sargent equation, 23–4  
 liquid-junction potential, 11, 20–5, 74, 76, 94–5  
 liquid membrane, with an ionophore, 39–45  
   ISE, 168–188  
   solvents of, 182–3  
   theory of, 30–45  
 lithium ISE, 187
- magnesium ISM, 184  
 masking of interferents, 92  
 measuring system, requirements of, 93–5  
 membrane potential, 11–25  
 membranes, history, 1–4  
 mercury ISE, 143  
 metal buffer, 77, 95  
 metal contact, in ISE, 64–5  
 Michaelis–Menten equation, 197  
 mitochondrion membrane potential, ISE  
   measurement, 188  
 mixed solution technique, 77, 211  
 monensin, 179, 181, 187  
   determination by voltammetry at ITIES, 209  
 monohydrogencarbonate ISE, 186
- Nernst potential, 11–12  
 Nernstian slope, 28  
 Nernst–Planck equation, 20  
 neutral ion carrier, *see under* ionophore  
 nigericin, 174, 179, 181  
 Nikolsky equation, 28, 32, 36, 38  
 nitrate ISE, 185–6  
   with renewable surface, 62–3  
 nonactin, 178, 187  
   determination of, by voltammetry at ITIES, 208–9
- organic radical ion ISE, 156
- Pallmann effect, 25, 94–5  
 perchlorate ISE, 185–6  
 periodate ISE, 186  
 pH adjustment, 91  
 plastic film ISE, 61–3  
 polyvinyl chloride matrix ISE, *see under* plastic film ISE  
 polymeric film ISE, *see under* plastic film ISE  
 potassium ISE, 171, 181, 186–7  
 potentiometric titration, 103–8  
   in flow systems, 117–120  
 preconditioning of ISE, 93
- reference electrode, 94  
 residual chlorine electrode, 136

*Index*

217

- response time, 78–81  
  ISM, 78, 81  
Robinson–Stokes equation, 74  
sample preparation, 89–91  
selectivity coefficient, 28–52  
  determination, 77–8  
  table, 211–214  
  membrane solvent influence, 168–9  
‘Selectrode’, 60, 64  
separate solution method, 77–8, 211  
sodium ISE, 181, 187  
solid membrane ISE, theory, 45–52  
solvent–polymeric ISE, *see under* plastic film ISE  
sulphate, determination of, 141  
sulphide ISE, 137–140  
surfactant ISE, 188  
suspension effect, *see under* Pallmann effect  
TATB assumption, 12  
temperature adjustment, 92–3  
temperature coefficient, of ISE potential, 81–2  
tetrafluoroborate ISE, 186  
thallium ISE, 188  
thioxyanate ISE, 137  
thiol group, determination of, 139–140  
TISAB, 146–7  
tissue electrode, 199  
two-phase titration, 62  
  
uranyl ISE, 181, 188  
urea ISE, 196–7  
  
valinomycin, 171–4, 178, 181, 186  
  determination of, by voltammetry at ITIES, 209  
Volta potential, 9  
  
zinc ISE, 143
