

Contents

	<i>Preface</i>	<i>page</i> ix
	<i>Frequently used notation</i>	xv
1	Distribution modulo one	1
	1.1 Weyl's criterion	1
	1.2 Metrical results	5
	1.3 Discrepancy	9
	1.4 Distribution functions	11
	1.5 The multidimensional case	12
	1.6 Exercises	14
	1.7 Notes	14
2	On the fractional parts of powers of real numbers	15
	2.1 Thue, Hardy, Pisot and Vijayaraghavan	15
	2.2 On some exceptional pairs (ξ, α)	22
	2.3 On the powers of real numbers close to 1	28
	2.4 On the powers of some transcendental numbers	33
	2.5 A theorem of Furstenberg	37
	2.6 A conjecture of de Mathan and Teulié	39
	2.7 Exercises	41
	2.8 Notes	44
3	On the fractional parts of powers of algebraic numbers	48
	3.1 The integer case	48
	3.2 Mahler's Z -numbers	50
	3.3 On the fractional parts of powers of algebraic numbers	53
	3.4 On the fractional parts of powers of Pisot and Salem numbers	56

vi	<i>Contents</i>	
	3.5 The sequence $(\ \xi\alpha^n\)_{n \geq 1}$	61
	3.6 Constructions of Pollington and of Dubickas	68
	3.7 Waring's problem	72
	3.8 On the integer parts of powers of algebraic numbers	73
	3.9 Exercises	73
	3.10 Notes	74
4	Normal numbers	78
	4.1 Equivalent definitions of normality	79
	4.2 The Champernowne number	86
	4.3 Normality and uniform distribution	89
	4.4 Block complexity and richness	91
	4.5 Rational approximation to Champernowne-type numbers	92
	4.6 Exercises	96
	4.7 Notes	96
5	Further explicit constructions of normal and non-normal numbers	102
	5.1 Korobov's and Stoneham's normal numbers	102
	5.2 Absolutely normal numbers	111
	5.3 Absolutely non-normal numbers	112
	5.4 On the random character of arithmetical constants	114
	5.5 Exercises	116
	5.6 Notes	116
6	Normality to different bases	118
	6.1 Normality to a prescribed set of integer bases	118
	6.2 Normality to non-integer bases	123
	6.3 On the expansions of a real number to two different bases	131
	6.4 On the representation of an integer in two different bases	134
	6.5 Exercises	135
	6.6 Notes	135
7	Diophantine approximation and digital properties	139
	7.1 Exponents of Diophantine approximation	140
	7.2 Prescribing simultaneously the values of all the exponents v_b	144
	7.3 Badly approximable numbers to integer bases	147
	7.4 Almost no element of the middle third Cantor set is very well approximable	153

<i>Contents</i>		vii
7.5	Playing games on the middle third Cantor set	156
7.6	Elements of the middle third Cantor set with prescribed irrationality exponent	158
7.7	Normal and non-normal numbers with prescribed Diophantine properties	161
7.8	Hausdorff dimension of sets with missing digits	163
7.9	Exercises	165
7.10	Notes	166
8	Digital expansion of algebraic numbers	170
8.1	A transcendence criterion	171
8.2	Block complexity of algebraic numbers	173
8.3	Zeros in the b -ary expansion of algebraic numbers	176
8.4	Number of digit changes in the b -ary expansion of algebraic numbers	182
8.5	On the b -ary expansion of e and some other transcendental numbers	184
8.6	On the digits of the multiples of an irrational number	185
8.7	Exercises	189
8.8	Notes	192
9	Continued fraction expansions and β-expansions	195
9.1	Normal continued fractions	195
9.2	On the continued fraction expansion of an algebraic number	201
9.3	On β -expansions	206
9.4	Exercises	209
9.5	Notes	210
10	Conjectures and open questions	214
	<i>Appendix A</i> Combinatorics on words	223
	<i>Appendix B</i> Some elementary lemmata	231
	<i>Appendix C</i> Measure theory	234
	<i>Appendix D</i> Continued fractions	241
	<i>Appendix E</i> Diophantine approximation	246
	<i>Appendix F</i> Recurrence sequences	253
	<i>References</i>	257
	<i>Index</i>	299
