<i>Acknowledgments</i>	<i>page ix</i>
<i>Introduction</i>	xi
<b>1 Symplectic Fibrations</b>	1
1.1 What Is a Symplectic Fiber Bundle?	1
1.2 Symplectic Connections	2
1.3 Minimal Coupling	5
1.4 The Coupling Form $\omega_\Gamma$	7
1.5 Weak Coupling	12
1.6 Varying the Connection	17
<b>2 Examples of Symplectic Fibrations: The Coadjoint Orbit Hierarchy</b>	21
2.1 Basic Example	22
2.2 A Normal Form Theorem	27
2.3 Fibrations of Coadjoint Orbits and the Cross Section Theorem	29
2.4 Symplectic Mackey–Wigner Theory	45
2.5 Riemannian Submersions with Totally Geodesic Fibers	46
2.6 The Hannay–Berry Connection	51
<b>3 Duistermaat–Heckman Polynomials</b>	54
3.1 Orbital Methods in Representation Theory	54
3.2 Computing the D–H Polynomials: The Case of Linear Action	65
3.3 Computing the D–H Polynomials: The “Heckman” Formula	76
3.4 Is There a “Kostant” Formula Corresponding to the Heckman Formula?	84
3.5 Computing the D–H Polynomials: Formulas for the Jumps	95

Cambridge University Press

978-0-521-11186-7 - Symplectic Fibrations and Multiplicity Diagrams

Victor Guillemin, Eugene Lerman and Shlomo Sternberg

vi	<i>Contents</i>	
	Appendix 3.A: The Duistermaat–Heckman Measure as the Volume of Reduced Spaces	101
	Appendix 3.B: Localization and the Duistermaat–Heckman Formula	102
<b>4</b>	<b>Symplectic Fibrations and Multiplicity Diagrams</b>	<b>107</b>
4.1	A Few Words about the Contents of This Chapter	107
4.2	The Heckman Formula	111
4.3	An Inductive Formula for the D–H Measure Associated with a Coadjoint Orbit of $U(n)$	116
4.4	The Kostant Formula	119
4.5	The Weak Coupling Limit	122
4.6	Reduction and Weak Coupling	125
4.7	Some Final Comments about Weak Coupling	130
<b>5</b>	<b>Computations with Orbits</b>	<b>140</b>
5.1	Generalities about Toral Moment Maps	140
5.2	Singular Values of the Moment Map $\Phi: \mathcal{O} \rightarrow \mathfrak{t}$	141
5.3	Examples: $SU(4)$ Orbits	146
5.4	Duistermaat–Heckman Polynomials for 10-Dimensional Orbit of $SU(4)$	153
5.5	Variation of Orbits	163
	<b>Appendix A: Multiplicity Formulas</b>	<b>167</b>
A.1	Weyl, Kostant, and Steinberg Formulas	167
A.2	The Action of the Casimir Element on $Z(\lambda)$	170
A.3	Determining the Coefficients	172
A.4	Proof of the Kostant and Weyl Formulas	175
	<b>Appendix B: Equivariant Cohomology</b>	<b>177</b>
B.1	Hidden Symmetries	177
B.2	Equivariant Cohomology	178
B.3	Superalgebras	180
B.4	Differential $G$ Complexes	181
B.5	The Weil Algebra	184
B.6	The Matthai–Quillen Isomorphism	186
B.7	The Cartan Model	188
B.8	Locally Free Complexes	189
B.9	Equivariant Cohomology: Homogeneous Spaces	190
B.10	The Thom Form According to Mattai–Quillen	195

---

	<i>Contents</i>	vii
B.11	Equivariant Superconnections	197
B.12	Equivariant Characteristic Classes	199
B.13	Reduction Formula for Locally Free Torus Actions	201
B.14	Localization	204
B.15	Localization in Stages	210
	<b>Appendix C: Update</b>	211
C.1	Commutativity of Quantization and Reduction	211
C.2	Toric Varieties	213
C.3	Orbifolds	213
C.4	Presymplectic Hamiltonian Actions	214
C.5	Nonisolated Fixed Points	214
	<i>Bibliography</i>	215
	<i>Index</i>	221
