Acknowledgments	xix
I Introducing SAS Enterprise Guide	
1 SAS Enterprise Guide Projects	3
1.1 A brief history of SAS	3
1.2 Opening a project	4
1.3 The contents of projects	5
1.4 Navigating tabs in the Process Flow screen	9
1.5 The main SAS Enterprise Guide menu	10
1.6 Additional resources	12
2 Placing Data into SAS Enterprise Guide Projects	13
2.1 Overview	13
2.2 Entering data directly into SAS Enterprise Guide	13
2.3 Saving a project	19
2.4 Importing data from Excel	19
II Performing Analyses and Viewing Output	
3 Performing Statistical Analyses in SAS Enterprise Guide	25
3.1 Overview	25
	v

vi Contents

3.2	Numerical example	25
3.3	Selecting the procedure	25
3.4	Assigning Task roles	26
3.5	The Variables to assign and Task roles panels	28
3.6	Other choices in the navigation panel	28
3.7	Performing the analysis	31
4	Managing and Viewing Output	32
4.1	Overview	32
4.2	Numerical example	32
4.3	Specifying the output format	32
4.4	Examining the statistical results	35
4.5	Saving the output as a PDF document	38
III	Manipulating Data	
5	Sorting Data and Selecting Cases	43
5.1	Overview	43
5.2	Numerical example	43
5.3	Sorting data	43
5.3	Selecting cases	46
6	Recoding Existing Variables	53
6.1	Overview	53
6.2	Numerical example	54
6.3	Performing the recoding	54
7	Computing New Variables	63
7.1	Overview	63
7.2	Numerical example	63
7.3	Computing a new variable from an existent variable	64
7.4	Computing a new variable by combining several variables	69

IV Describing Data

8 Descriptive Statistics	77
8.1 Overview	77
8.2 Categories of descriptive statistics	77
8.3 Numerical example	79
8.4 Obtaining basic descriptive statistics for the quantitative variables	79
8.5 Obtaining skewness and kurtosis statistics	84
8.6 Obtaining frequency counts for the categorical variables	88
9 Graphing Data	91
9.1 Overview	91
9.2 Numerical example	91
9.3 Constructing bar charts	92
9.4 Constructing line plots	97
10 Standardizing Variables Based on the Sample Data	104
10.1 Overview	104
10.2 Numerical example	105
10.3 Obtaining standardized scores: z scores	105
10.3 Obtaining standardized scores: linear <i>T</i> scores	108
11 Standardizing Variables Based on Existing Norms	111
11.1 Overview	111
11.2 Numerical example	111
11.3 Setting up the computing process	112
11.4 Obtaining the standardized values	115
V Score Distribution Assumptions	
12 Detecting Outliers	119
12.1 Overview	119

viii Contents

12.2	Specifying the boundary for an outlier	119
12.3	Numerical example	120
12.4	The box and whisker plot	121
12.5	Transforming values to z scores	123
12.6	Obtaining extreme values	124
13	Assessing Normality	130
13.1	Overview	130
13.2	The normality tests provided by SAS	130
13.3	Numerical example	131
13.4	Obtaining the normality assessments	131
14	Nonlinearly Transforming Variables in Order to Meet Underlying Assumptions	135
14.1	Overview	135
14.2	Notes on transformations	135
14.3	Examples of nonlinear transformations	136
14.4	Numerical example	137
14.5	Transformation strategy	138
14.6	Switch to Update mode	139
14.7	Setting up the computing process	140
14.8	Evaluating the effects of our transformations	148
VI	Correlation and Prediction	
15	Bivariate Correlation: Pearson Product–Moment and Spearman Rho Correlations	155
15.1	Overview	155
15.2	Some history	155
15.3	The two correlation coefficients of interest here	156
15.4	Numerical example	157
15.5	Setting up the correlation analysis	157
15.6	The correlation output	158
16	Simple Linear Regression	162
16.1	Overview	162

Contents	ix
16.2 Naming the classes of variables	162
16.3 Numerical example	163
16.4 Setting up the regression solution	164
16.5 The regression output	166
17 Multiple Linear Regression	170
17.1 Overview	170
17.2 Numerical example	170
17.3 Viewing the correlations	171
17.4 Setting up the regression solution	172
17.5 The regression output	175
18 Simple Logistic Regression	177
18.1 Overview	177
18.2 Some differences between linear and logistic regression	177
18.3 Two notable features of logistic regression	178
18.4 Numerical example	178
18.5 Setting up the logistic regression solution	179
18.6 The logistic regression output	181
19 Multiple Logistic Regression	185
19.1 Overview	185
19.2 Coding of binary predictor variables	185
19.3 Numerical example	186
19.4 Setting up the logistic regression solution	186
19.5 The logistic regression output	188
VII Comparing Means: The t Test	
20 Independent-Groups t Test	195
20.1 Overview	195
20.2 Some history	195
20.3 Numerical example	196

x Contents

20.4	Setting up the analysis	197
20.5	The t-test output	197
20.6	Magnitude of the effect	199
21	Correlated-Samples t Test	201
21.1	Overview	201
21.2	Relation to bivariate correlation	201
21.3	Numerical example	202
21.4	Setting up the analysis	203
21.5	The t-test output	203
21.6	Magnitude of the effect	205
22	Single-Sample t Test	206
22.1	Overview	206
22.2	The general approach	206
22.3	Numerical example	207
22.4	Setting up the analysis	207
22.5	The t-test output	207
VIII Comparing Means: ANOVA		
23	One-Way Between-Subjects ANOVA	213
23.1	Overview	213
23.2	Naming of ANOVA designs	213
23.3	Some history	214
23.4	Numerical example	215
23.5	Setting up the analysis	216
23.6	The ANOVA output	219
24	Two-Way Between-Subjects Design	223
24.1	Overview	223
24.2	Omnibus and simple effects analysis	224
24.3	Numerical example	224
24.4	Setting up the analysis	225
24.5	The ANOVA output	233

Contents	xi
25 One-Way Within-Subjects ANOVA	238
25.1 Overview	238
25.2 Numerical example	238
25.3 The structure of the data set	239
25.4 Setting up the analysis	240
25.5 Output for the analysis	250
26 Two-Way Mixed ANOVA Design	253
26.1 Overview	253
26.2 The partitioning of the variance in a mixed design	253
26.3 Numerical example	254
26.4 Setting up the analysis	254
26.5 The ANOVA output	263
 IX Nonparametric Procedures	
27 One-Way Chi-Square	269
27.1 Overview	269
27.2 Numerical example	270
27.3 Setting up the analysis	271
27.4 The chi-square output	272
27.5 Comparing the two most preferred categories: analysis setup	274
27.6 Comparing the two most preferred categories: chi-square output	277
28 Two-Way Chi-Square	279
28.1 Overview	279
28.2 The issue of small frequency counts	280
28.3 Numerical example	282
28.4 Setting up the analysis	282
28.5 The chi-square output	284
29 Nonparametric Between-Subjects One-Way ANOVA	291
29.1 Overview	291

xii Contents

29.2	The nonparametric analogues to One-Way ANOVA	291
29.3	Numerical example	292
29.4	Setting up the analysis	292
29.5	Output of the analyses	293
X	Advanced ANOVA Techniques	
30	One-Way Between-Subjects Analysis of Covariance	299
30.1	Overview	299
30.2	Assumptions of ANCOVA	300
30.3	Numerical example	300
30.4	Evaluating the assumptions of ANCOVA	301
30.5	Setting up the ANCOVA	308
30.6	The ANCOVA output	310
31	One-Way Between-Subjects Multivariate Analysis of Variance	313
31.1	Overview	313
31.2	Univariate and multivariate ANOVA	313
31.3	Numerical example	314
31.4	Setting up the MANOVA	315
31.5	The MANOVA output	316
31.6	Follow-up analyses: setup	319
31.7	Follow-up analyses: output	322
XI	Analysis of Structure	
32	Factor Analysis	327
32.1	Overview	327
32.2	Some history	327
32.3	The basis of factor analysis	328
32.4	The extraction phase	328
32.5	The rotation phase	330
32.6	Numerical example	331

Contents	xiii
<hr/>	
32.7 Setting up the factor analysis	333
32.8 The factor analysis output	337
33 Canonical Correlation Analysis	345
33.1 Overview	345
33.2 Canonical and linear regression	346
33.3 Number of canonical functions	346
33.4 Canonical and factor analysis	347
33.5 Numerical example	347
33.6 Setting up the Canonical Correlation Analysis	349
33.7 Output for Canonical Correlation Analysis	352
