

INDEX

- acid-base balance, 34, 58, 59
acidosis, 2, 58, 59, 107
adrenal gland, 27, 78
age and diving responses, 102–6, 113
alligator, 12
altitude, reaction of seals to, 34
alveolar gases, 64, 90, 100, 120
Ama divers
 basal metabolic rate, 62
 body insulation, 62
 characteristics, 64
 electrocardiograms, 67
 history, 61
 maximum dive times, 116
 training, 61, 62
anaerobic metabolism
 in brain, 37, 113
 during dives, 5, 13, 15, 54
 fetal, 106, 111, 113
 in heart, 39, 55
anaesthesia, effect on diving response,
 76, 78, 82, 102
aorta, blood flow, 20, 21, 23, 24
aortic bulb, 23, 105
Aplysia, 8–9
apnoea, 17
 pathological, 115, 117, 122, 123,
 124, 125
 reflexly produced, 77, 81, 82, 84,
 85, 86, 90, 91, 95, 96, 117
 sleep, 11, 125, 126
armadillo, 20
arrhythmia, cardiac, 20, 67, 123–4
artery
 carotid, 23
 femoral, 21, 44
 innervation of, 45–6
 renal, 23, 24
 superior mesenteric, 23, 24
asphyxia
 bradycardia during, 20, 25, 26
 compared with submersion, 77
 definition, 1–2
 diving, 12, 80, 82
 effects, 30
 neonatal, 104, 106, 111, 113–15, 122
 resistance to, 31, 38
asphyxial defence, 48, 49–53, 115
atropine, effects on diving responses,
 25, 76, 101, 119
baroreceptor reflexes, 86–8, 98–9
beaver, 15, 35
biochemical adaptations, 53–9
birth, 10, 104
blood
 flow, 15, 20, 23–7, 68–9, 70–2, 95,
 101, 107–9
 gases, 69–70, 71–2, 113
 oxygen capacity, 33–4
 pressure, 21–3, 44, 67–8, 69, 70
 respiratory properties, 34
 volume, 33, 34, 35
blubber, in seals, 3
bradycardia
 diving, 15, 16–20, 25
 in diving ducks, 15, 77
 in diving human subjects, 66,
 92–103
 in diving seals, 15, 21, 24, 109–10
 in fetal seals, 110–11
brain
 arrest of circulation in, 37–8, 106
 oxygen consumption in diving
 seal's, 37
 relative intolerance to asphyxia, 30,
 32, 36, 37–8, 113
 weight of seal's, 31–2, 105–6
breath-holding, 68, 69, 70, 92, 96–7
 Ama divers, 64
breathing pattern of marine mammals,
 34
'Brides in the Bath' murders, 121–2
