Contents

	<i>Preface</i>	<i>page xi</i>
1	Interconnectedness in heliophysics	1
	<i>Carolus J. Schrijver and George L. Siscoe</i>	
	1.1 Introduction	1
	1.2 Field–plasma–neutral interaction	2
	1.3 Transport of angular momentum and energy	3
	1.4 Dynamo action	4
	1.5 Extreme events and habitability	6
	1.6 Our remarkable, remarkably sensitive environment	7
	1.7 System complexity	9
2	Long-term evolution of magnetic activity of Sun-like stars	11
	<i>Carolus J. Schrijver</i>	
	2.1 A brief history of the Sun: past, present, future	12
	2.2 Present-day solar activity	14
	2.3 Stellar activity	31
	2.4 Spots, faculae, network field, and spectral radiance	40
	2.5 Activity, rotation, and loss of angular momentum	41
	2.6 Dynamos: polar spots, small-scale field, and flux dispersal	44
	2.7 Fully convective stars, brown dwarfs, and beyond	46
	2.8 The Maunder minimum state of solar and heliospheric activity	46
3	Formation and early evolution of stars and protoplanetary disks	49
	<i>Lee W. Hartmann</i>	
	3.1 How do stars form?	49
	3.2 Disks and angular momentum transport	52
	3.3 Disk winds	55
	3.4 What are young stars like?	58

vi

Contents

3.5	What sets the initial angular momenta of stars?	63
3.6	Protoplanetary disks and gravity	66
3.7	Dust disk evolution	69
3.8	Disk evaporation	72
3.9	Exoplanets	74
3.10	Concluding remarks	77
4	Planetary habitability on astronomical time scales	79
	<i>Donald E. Brownlee</i>	
4.1	Introduction	79
4.2	Environmental limits for life as we know it	79
4.3	The habitable zone and the effects of stellar heat	81
4.4	The habitable zone and other stellar effects	85
4.5	Earth before life	86
4.6	The early history of terrestrial life	89
4.7	The rise of oxygen	90
4.8	The evolution and survival of animals	92
4.9	The decline of carbon dioxide	92
4.10	The loss of oceans and the end of plate tectonics	94
4.11	The red giant Sun and the fate of habitable zone planets	95
5	Solar internal flows and dynamo action	99
	<i>Mark S. Miesch</i>	
5.1	Magnetism with enthusiasm	99
5.2	The many faces of solar convection	101
5.3	Local dynamos and the magnetic carpet	112
5.4	Global dynamos or “How to build a sunspot”	118
5.5	Rotational shear and meridional circulation	125
5.6	Puzzles and prospects	136
	Appendix: Physical characteristics of the solar convection zone	137
6	Modeling solar and stellar dynamos	141
	<i>Paul Charbonneau</i>	
6.1	The dynamo problem	141
6.2	Solar dynamo models	143
6.3	Modeling the solar cycle	159
6.4	Stellar dynamos	170
6.5	Outlook	176
7	Planetary fields and dynamos	179
	<i>Ulrich R. Christensen</i>	
7.1	Introduction	179
7.2	Geomagnetic field	180

Table of Contents

[More information](#)

<i>Contents</i>		vii
7.3	Magnetic fields of other planets and satellites	187
7.4	Structure and energy budget of planetary interiors	190
7.5	Some basics of planetary dynamos	195
7.6	Numerical geodynamo models	199
7.7	Dynamo models for Mercury and the gas planets	212
7.8	Outlook	214
8	The structure and evolution of the three-dimensional solar wind	217
	<i>John T. Gosling</i>	
8.1	Introduction	217
8.2	The heliospheric current sheet	218
8.3	Latitudinal and solar-cycle variations of the solar wind	219
8.4	Solar wind stream structure	221
8.5	Evolution of stream structure with heliocentric distance	223
8.6	Transient disturbances in the solar wind	231
8.7	The evolving global heliospheric magnetic field	237
8.8	Long-term changes in the heliospheric magnetic field	241
9	The heliosphere and cosmic rays	243
	<i>J. R. Jokipii</i>	
9.1	Introduction	243
9.2	Observed cosmic-ray time variations	246
9.3	The physics of heliospheric cosmic-ray temporal variations	251
9.4	The transport of cosmic-ray particles in the heliosphere	255
9.5	Solar modulation of galactic cosmic rays	259
9.6	Sample model simulations using the full transport equation	261
9.7	The Maunder minimum	264
9.8	On the heliospheric modulation of galactic cosmic rays	266
9.9	The sunspot minimum between cycles 23 and 24	267
9.10	In conclusion	267
10	Solar spectral irradiance: measurements and models	269
	<i>Judith L. Lean and Thomas N. Woods</i>	
10.1	Introduction	269
10.2	Historical perspective	274
10.3	Measuring solar irradiance and its variations	278
10.4	Understanding and modeling solar irradiance variations	285
10.5	Reconstructing historical irradiance changes	290
10.6	Forecasting irradiance variations	294
10.7	Summary	295

11	Astrophysical influences on planetary climate systems	299
	<i>Jürg Beer</i>	
	11.1 Introduction	299
	11.2 External influences	300
	11.3 Variability of influences	311
	11.4 Reconstruction of long-term solar variability	319
12	Assessing the Sun–climate relationship in paleoclimate records	333
	<i>Thomas J. Crowley</i>	
	12.1 Introduction	333
	12.2 The instrumental record of climate change	334
	12.3 Results from the climate records for the past 2000 years	337
	12.4 Sun and climate beyond the most recent two millennia	345
	12.5 Discussion and conclusions	347
13	Terrestrial ionospheres	351
	<i>Stanley C. Solomon</i>	
	13.1 Introduction	351
	13.2 Ionization	353
	13.3 Recombination	355
	13.4 Venus and Mars	358
	13.5 Ionospheres, exoplanets, and signatures of life	361
14	Long-term evolution of the geospace climate	363
	<i>Jan J. Sojka</i>	
	14.1 Introduction	363
	14.2 Our experience of geospace climate change	365
	14.3 Geospace climate response to solar photon irradiation	366
	14.4 Geospace climate at earlier terrestrial ages	373
	14.5 Geospace climate response to Earth’s magnetic field changes	379
	14.6 Geospace climate response to anthropogenic change	386
15	Waves and transport processes in atmospheres and oceans	389
	<i>Richard L. Walterscheid</i>	
	15.1 Atmospheric waves	389
	15.2 Examples of observed atmospheric waves	392
	15.3 Dynamics of planetary waves	395
	15.4 Dynamics of gravity waves	399
	15.5 Quantitative theory of oscillations on a rotating sphere	400
	15.6 Oscillations of an atmosphere	403
	15.7 Forced waves	409
	15.8 Atmospheric waves on other planets	412

	<i>Contents</i>	ix
15.9	Transports and wave forcing	413
15.10	Climatic effects of waves	414
15.11	Waves in the ionosphere–thermosphere (IT) system	417
15.12	Consequences of changing the planetary rotation	422
16	Solar variability, climate, and atmospheric photochemistry	425
	<i>Guy P. Brasseur, Daniel Marsch, and Hauke Schmidt</i>	
16.1	Introduction	425
16.2	The climate system	426
16.3	Atmospheric photochemistry	429
16.4	Ozone chemistry in the stratosphere	431
16.5	Response of ozone to solar variability	434
16.6	Response of atmospheric dynamics to solar variability	441
16.7	Conclusions	446
	<i>Appendix I Authors and editors</i>	449
	<i>List of illustrations</i>	451
	<i>List of tables</i>	460
	<i>References</i>	461
	<i>Index</i>	488
