
Contents

	<i>Prologue</i>	<i>page xi</i>
1	The ellipsoidal system and its geometry	1
	1.1 Confocal families of second-degree surfaces	1
	1.2 Ellipsoidal coordinates	8
	1.3 Analytic geometry of the ellipsoidal system	13
	1.4 Differential geometry of the ellipsoidal system	17
	1.5 Sphero-conal and ellipso-spherical coordinates	22
	1.6 The ellipsoid as a dyadic	29
	1.7 Problems	35
2	Differential operators in ellipsoidal geometry	39
	2.1 The basic operators in ellipsoidal form	39
	2.2 Ellipsoidal representations of the Laplacian	42
	2.3 The thermometric parameters of Lamé	43
	2.4 Spectral decomposition of the Laplacian	45
	2.5 Problems	48
3	Lamé functions	49
	3.1 The Lamé classes	49
	3.2 Lamé functions of class K	51
	3.3 Lamé functions of classes L and M	54
	3.4 Lamé functions of class N	58
	3.5 Discussion on the Lamé classes	60
	3.6 Lamé functions of the second kind	66
	3.7 Problems	67
4	Ellipsoidal harmonics	70
	4.1 Interior ellipsoidal harmonics	70
	4.2 Harmonics of degree four	73
	4.3 Exterior ellipsoidal harmonics	77
	4.4 Surface ellipsoidal harmonics	78

4.5	Orthogonality properties	79
4.6	Problems	86
5	The theory of Niven and Cartesian harmonics	89
5.1	The roots of the Lamé functions	89
5.2	The theory of Niven harmonics	94
5.3	The characteristic system	97
5.4	From Niven back to Lamé	102
5.5	The Klein–Stieltjes theorem	104
5.6	Harmonics of degree four revisited	106
5.7	Problems	108
6	Integration techniques	109
6.1	Integrals over an ellipsoidal surface	109
6.2	The normalization constants	113
6.3	The normalization constants revisited	117
6.4	Problems	121
7	Boundary value problems in ellipsoidal geometry	124
7.1	Expansion of the fundamental solution	124
7.2	Eigenources and eigenpotentials	127
7.3	The closure relation	129
7.4	Green’s function and its image system	131
7.5	The Neumann function and its image system	143
7.6	Singularities of exterior ellipsoidal harmonics	156
7.7	Problems	160
8	Connection between harmonics	163
8.1	Geometrical reduction	163
8.2	Sphero-conal harmonics	169
8.3	Differential formulae for harmonic functions	173
8.4	Sphero-conal expansions of interior ellipsoidal harmonics	180
8.5	Integral formulae for harmonic functions	190
8.6	Sphero-conal expansions of exterior ellipsoidal harmonics	195
8.7	Problems	200
9	The elliptic functions approach	203
9.1	The Weierstrass approach	203
9.2	The Jacobi approach	207
9.3	The Weierstrass–Jacobi connection	210
9.4	Integral equations for Lamé functions	213
9.5	Integral representations for ellipsoidal harmonics	219
9.6	Problems	224
10	Ellipsoidal biharmonic functions	226
10.1	Eigensolutions of the ellipsoidal biharmonic equation	226

<i>Contents</i>		ix
10.2	Re-orthogonalization of surface harmonics	228
10.3	The leading biharmonics	233
10.4	Problems	237
11	Vector ellipsoidal harmonics	238
11.1	Vector ellipsoidal harmonics	238
11.2	Orthogonality	241
11.3	The expansion theorem	245
11.4	Problems	249
12	Applications to geometry	251
12.1	Perturbation of the first fundamental form	251
12.2	Perturbation of the unit normal	255
12.3	Perturbation of the second fundamental form	256
12.4	Perturbation of the curvatures	260
12.5	The ellipsoidal stereographic projection	263
12.6	The surface area of an ellipsoid	265
12.7	Problems	269
13	Applications to physics	271
13.1	Thermal equilibrium	271
13.2	The gravitational potential	273
13.3	The conductor potential	277
13.4	The polarization potential	278
13.5	The virtual mass potential	280
13.6	The generalized polarization potentials	282
13.7	Reduction to spheroids, asymptotic degeneracies, and spheres	286
13.8	Problems	288
14	Applications to low-frequency scattering theory	290
14.1	Acoustic scattering	291
14.2	Electromagnetic scattering	301
14.3	Elastic scattering	313
14.4	Problems	323
15	Applications to bioscience	325
15.1	Electromagnetic activity of the brain	325
15.2	Electroencephalography	327
15.3	Magnetoencephalography	333
15.4	The magnetic potential of the ellipsoid	339
15.5	Tumor growth	343
15.6	The nutrient concentration field	346
15.7	The pressure field	350
15.8	Evolution of the boundary	354
15.9	The spherical tumor	355

15.10 Problems	357
16 Applications to inverse problems	358
16.1 Inversion of low-frequency scattering data	359
16.2 Inversion of scattering data in the time domain	364
16.3 Inversion of tomographic data	366
16.4 The inverse EEG problem for a dipole	370
16.5 Problems	372
<i>Epilogue</i>	373
Appendix A Background material	378
A.1 The fundamental solution	378
A.2 Kelvin's theorem	378
A.3 Surface curvatures	379
A.4 Elliptic integrals	380
Appendix B Elements of dyadic analysis	383
Appendix C Legendre functions and spherical harmonics	391
Appendix D The fundamental polyadic integral	397
Appendix E Forms of the Lamé equation	402
Appendix F Table of formulae	405
F.1 Explicit form of Lamé functions	405
F.2 Explicit form of ellipsoidal harmonics	408
F.3 Explicit form of vector ellipsoidal harmonics	412
F.4 The normalization constants	417
Appendix G Miscellaneous relations	418
G.1 Relations among constants	418
G.2 Relations among elliptic integrals	422
G.3 Relations among interior ellipsoidal harmonics	425
G.4 Relations among exterior ellipsoidal harmonics	426
G.5 Ellipsoidal representations of Cartesian expressions	427
G.6 Gradients of ellipsoidal harmonics	429
G.7 General vector and dyadic relations	432
G.8 Particular integrals	434
<i>Bibliography</i>	436
<i>Index</i>	453
