Introduction: Why Observe the Moon?	1
1 Our Moon	4
The Earth–Moon system	5
Lunar coordinates and quadrants	5
The Moon's surface features	10
<i>Further reading</i>	33
2 The Moon's Motions and Consequent Phenomena	35
The Celestial Sphere	35
The phases of the Moon	38
The 'Earthshine'	41
The Sidereal and Synodic months	41
The Moon's path in the sky	42
The 'Harvest Moon'	44
Form of the Moon's orbit	47
The Moon's orbital motion, axial rotation and librations	50
Solar and lunar eclipses	52
<i>Further Reading</i>	55
3 The Moon Observer's Telescope	56
Refracting telescopes	56
Reflecting telescopes	59
Catadioptric telescopes	61
Resolving power and light grasp of telescopes	65
Eyepieces or oculars	65

	<i>Contents</i>
The Barlow lens	69
Buy or build?	70
Refractor or reflector?	71
What about catadioptrics?	73
Your first telescope	73
Eyepieces	74
Telescope mountings	75
Setting circles	79
The observing site	79
Housing and care of the telescope	80
Protection from dust and atmospheric pollution	82
Cleaning the mirror	83
Collimating the telescope	83
Setting up and adjusting the equatorial mount	87
Balancing the telescope	89
Adjusting the viewfinder	91
Telescope magnification and visibility of lunar detail	92
Testing the telescope	93
Testing for correction of spherical aberration	94
Testing for astigmatism	94
Tests of resolution	95
<i>Further reading</i>	95
4 The Moon from New to Full	97
Third day	97
Fourth day	103
Fifth day	107
Sixth day	111
Seventh day	116
Eighth day	125
Ninth day	137
Tenth day	146
Eleventh day	154
Twelfth day	160
Thirteenth day	169
Fourteenth day	175
Fifteenth day–full Moon	177
After full Moon	181
<i>Further reading</i>	187
5 Observing and Recording	188
The position of the terminator	188
The state of the Earth's atmosphere	189
The angular height of the Moon above the horizon	189
Observing and drawing	190
Selecting formations for systematic study	198
Using the telescope efficiently	200
Highlight observations	202

Contents

Desultory versus systematic observation	204
Care of eyepieces	205
Making charts and maps	205
<i>Further reading</i>	207
6 Mysterious Happenings on the Moon	208
Disappearances and appearances	209
Clouds, mists and obscurations	221
Variable light and dark spots and streaks	227
Lights, flashes and glows	235
Light shed on lunar 'mysteries' by orbiting space craft	240
<i>Further reading</i>	242
7 Suggestions for research	244
Lunar topography and mapping	244
The accuracy of lunar maps and drawings	250
The subjective nature of observation	252
Observation of central peaks of craters	253
Domes	254
Steep slopes on the Moon	255
Lunar fault scarps	256
The bright ray systems	257
Change and variability on the lunar surface	259
Lunar colors	265
Observing lunar eclipses	267
Occultations of stars	270
Lunar photography	272
Determination of the heights of lunar surface features	276
<i>Further reading</i>	280
<i>Appendices</i>	283
1 Numerical data pertaining to the Moon	283
2 Interesting facts	285
3 Some dates	286
4 Books about the Moon	288
5 Maps and atlases of the Moon	290
6 Calculation of the Sun's selenographic colongitude	294
7 Addresses of astronomical organisations	296
8 Published drawings and charts of the best known lunar formations	297
<i>Subject Index</i>	300
<i>Author and name index</i>	303
<i>Index of named lunar surface features</i>	305
