## Contents

<i>List of illustrations</i>	<i>page</i> viii
<i>Preface</i>	xi
<b>Part I A quick look at various zeta functions</b>	<b>1</b>
<b>1 Riemann zeta function and other zetas from number theory</b>	<b>3</b>
<b>2 Ihara zeta function</b>	<b>10</b>
2.1 The usual hypotheses and some definitions	10
2.2 Primes in $X$	11
2.3 Ihara zeta function	12
2.4 Fundamental group of a graph and its connection with primes	13
2.5 Ihara determinant formula	17
2.6 Covering graphs	20
2.7 Graph theory prime number theorem	21
<b>3 Selberg zeta function</b>	<b>22</b>
<b>4 Ruelle zeta function</b>	<b>27</b>
<b>5 Chaos</b>	<b>31</b>
<b>Part II Ihara zeta function and the graph theory prime number theorem</b>	<b>43</b>
<b>6 Ihara zeta function of a weighted graph</b>	<b>45</b>

Cambridge University Press

vi	<i>Contents</i>	
<b>7</b>	<b>Regular graphs, location of poles of the Ihara zeta, functional equations</b>	47
<b>8</b>	<b>Irregular graphs: what is the Riemann hypothesis?</b>	52
<b>9</b>	<b>Discussion of regular Ramanujan graphs</b>	61
9.1	Random walks on regular graphs	61
9.2	Examples: the Paley graph, two-dimensional Euclidean graphs, and the graphs of Lubotzky, Phillips, and Sarnak	63
9.3	Why the Ramanujan bound is best possible (Alon and Boppana theorem)	68
9.4	Why are Ramanujan graphs good expanders?	70
9.5	Why do Ramanujan graphs have small diameters?	73
<b>10</b>	<b>Graph theory prime number theorem</b>	75
10.1	Which graph properties are determined by the Ihara zeta?	78
<b>Part III</b>	<b>Edge and path zeta functions</b>	81
<b>11</b>	<b>Edge zeta functions</b>	83
11.1	Definitions and Bass's proof of the Ihara three-term determinant formula	83
11.2	Properties of $W_1$ and a proof of the theorem of Kotani and Sunada	90
<b>12</b>	<b>Path zeta functions</b>	98
<b>Part IV</b>	<b>Finite unramified Galois coverings of connected graphs</b>	103
<b>13</b>	<b>Finite unramified coverings and Galois groups</b>	105
13.1	Definitions	105
13.2	Examples of coverings	111
13.3	Some ramification experiments	115
<b>14</b>	<b>Fundamental theorem of Galois theory</b>	117
<b>15</b>	<b>Behavior of primes in coverings</b>	128
<b>16</b>	<b>Frobenius automorphisms</b>	133
<b>17</b>	<b>How to construct intermediate coverings using the Frobenius automorphism</b>	141

<i>Contents</i>		vii
<b>18</b>	<b>Artin <math>L</math>-functions</b>	144
18.1	Brief survey on representations of finite groups	144
18.2	Definition of the Artin–Ihara $L$ -function	148
18.3	Properties of Artin–Ihara $L$ -functions	154
18.4	Examples of factorizations of Artin–Ihara $L$ -functions	157
<b>19</b>	<b>Edge Artin <math>L</math>-functions</b>	164
19.1	Definition and properties of edge Artin $L$ -functions	164
19.2	Proofs of determinant formulas for edge Artin $L$ -functions	169
19.3	Proof of the induction property	173
<b>20</b>	<b>Path Artin <math>L</math>-functions</b>	178
20.1	Definition and properties of path Artin $L$ -functions	178
20.2	Induction property	180
<b>21</b>	<b>Non-isomorphic regular graphs without loops or multiedges having the same Ihara zeta function</b>	186
<b>22</b>	<b>Chebotarev density theorem</b>	194
<b>23</b>	<b>Siegel poles</b>	200
23.1	Summary of Siegel pole results	200
23.2	Proof of Theorems 23.3 and 23.5	202
23.3	General case; inflation and deflation	206
<b>Part V</b>	<b>Last look at the garden</b>	209
<b>24</b>	<b>An application to error-correcting codes</b>	211
<b>25</b>	<b>Explicit formulas</b>	216
<b>26</b>	<b>Again chaos</b>	218
<b>27</b>	<b>Final research problems</b>	227
