<i>Preface</i>	ix	PART III: THE OBSERVATIONAL RECORD OF THE ATMOSPHERE	
PART I: OBSERVING JUPITER		5 The Polar Regions	81
1 Observations from Earth	3	5.1 Visual observations	81
1.1 A view of Jupiter	3	5.2 Professional and spacecraft observations	81
1.2 History of visual observation	5	6 North North Temperate Regions (57°N to 35°N)	85
1.3 Methods of visual observation	10	6.1 Overview	85
1.4 Professional and photographic observations	16	6.2 Visual and photographic observations	91
2 Observations from spacecraft	19	6.3 Spacecraft observations	95
2.1 The Pioneer project	21	6.4 The NNTBs prograding jetstream	95
2.2 The Voyager project	27	7 North Temperate Region (35°N to 23°N)	101
2.3 The Galileo project	35	7.1 Overview	101
PART II: THE VISIBLE STRUCTURE OF THE ATMOSPHERE		7.2 The NTB(N) and North Temperate Zone	102
3 Horizontal structure: belts, currents, spots and storms	43	7.3 Periodic behaviour of the NTB	105
3.1 Belts, zones, and dynamical domains	43	7.4 The NTBs prograding jetstream	106
3.2 Currents and jetstreams	45	8 North Tropical Region (23°N to 9°N)	113
3.3 Spots and streaks	50	8.1 Overview	113
3.4 Three types of disturbance	54	8.2 North Tropical Zone	114
4 Vertical structure: colours and clouds	59	8.3 Variations in the North Tropical Current	116
4.1 The colours of the clouds	59	8.4 Spots on the NEB north edge	117
4.2 The heights of the clouds: viewing at an angle	62	8.5 Activity in the NEB	123
4.3 Thermal radiation	66	9 Equatorial Region (9°N to 9°S)	133
4.4 The upper atmosphere: studies from infrared emission	68	9.1 Overview	133
4.5 The upper atmosphere: studies from occultations	74	9.2 The NEB south edge	134
4.6 How high do the winds extend?	76	9.3 Features on the equator	145
4.7 Summary: the vertical structure of the atmosphere	77	9.4 Colorations of the Equatorial Zone	147
		9.5 The SEB north edge	153
		10 South Tropical Region (9°S to 27°S)	159
		10.1 Overview	159
		10.2 The South Equatorial Belt	167
		10.3 Revivals of the South Equatorial Belt	169
		10.4 Long-running SEB activity and mid-SEB outbreaks	184
		10.5 The Great Red Spot	188
		10.6 The South Tropical Zone	197

10.7	South Tropical Disturbances and Dislocations	197	PART V: THE ELECTROMAGNETIC ENVIRONMENT OF JUPITER	
10.8	South Tropical Bands and shadings	213		
10.9	The STBn prograding jetstream	215	17 Lights in the jovian night	287
11	South Temperate Region (27°S to 37°S)	219	17.1 Lightning	287
11.1	Overview	219	17.2 Meteors	287
11.2	‘SSTC invasions’ and the ‘South Temperate Disturbance’	222	17.3 Aurora	287
11.3	The three white ovals	223	17.4 Airglow	289
11.4	Fading of sectors of the STB	228	18 The magnetosphere and radiation belts	293
11.5	The SSTBn prograding jetstream	231	18.1 Overview	293
12	South South Temperate Regions (37°S to 53°S)	235	18.2 Components of the magnetosphere	299
12.1	Overview	235	18.3 The Io cloud and torus	303
12.2	Spacecraft observations	239	18.4 The Io flux tube and radio bursts	307
12.3	History of the SSTB, 1900–1940	241	PART VI: THE SATELLITES	
12.4	History of the SSTB, 1940–1990	242		
12.5	The S ⁴ TBn prograding jetstream and the edge of the polar region	244	19 The inner satellites and the ring	313
PART IV: THE PHYSICS AND CHEMISTRY OF THE ATMOSPHERE			20 The galilean satellites	319
13 Possible large-scale and long-term patterns	247		20.1 Discovery and history	319
13.1 Dislocations of belts, zones, and jetstreams	247		20.2 Visual and photographic observations	320
13.2 Hemispheric asymmetry	249		20.3 The satellite surfaces	329
13.3 Global upheavals	249		20.4 The search for atmospheres	331
13.4 Possible periodicities	252		20.5 The satellite interiors	333
14 The dynamics of individual spots	255		20.6 The satellite orbits	334
14.1 Early theories of the Great Red Spot	255		21 Io	341
14.2 The GRS and other ovals as anticyclonic vortices	256		21.1 Overview	341
14.3 Jetstream spots as anticyclonic vortices	260		21.2 The active volcanoes	345
14.4 The formation and evolution of anticyclonic circulations	261		21.3 The dormant volcanoes	351
14.5 Waves and oscillations	264		21.4 The physics and chemistry of Io: interior, volcanoes, and atmosphere	353
14.6 Cyclonic disturbances and bright plumes	266		21.5 The plains and the mountains	360
15 Theoretical models of the atmospheric dynamics	269		22 Europa	363
15.1 The depth of the atmosphere: the evidence	269		23 Ganymede	371
15.2 Jetstream dynamics: What determines the global pattern?	272		24 Callisto	383
15.3 Jetstream dynamics: What provides the energy?	275		25 The outer satellites	387
15.4 Ten questions for future research	276		PLATES	between 388 and 389
16 The composition of the planet	277		APPENDICES	
16.1 The chemical composition of the atmosphere: observations	277		A1 Measurements of longitude	389
16.2 The chemical composition of the atmosphere: theory	279		A2 Measurements of latitude	396
16.3 The global composition	281		A3 Lists of apparitions and published reports	401
16.4 Beneath the clouds	282		A4 Bibliography (The planet)	405
			A5 Bibliography (Magnetosphere and satellites)	412
			INDEX	417
