R. J. Bray, R. E. Loughhead and C. J. Durrant

Table of Contents

[More information](#)**CONTENTS**

	Preface	ix
	Acknowledgements	xv
1	Historical introduction	1
1.1	Early visual observations of the photospheric granulation	1
1.2	Pioneering photographic observations of Janssen, Hansky, and Chevalier	5
1.3	Strebel's discovery of the polygonal nature of the granules	9
1.4	Identification of the granules as convection cells	10
1.5	First spectroscopic measurements of granule velocities; attempts to interpret the granules as 'turbulent eddies'	12
1.6	Beginning of the modern era of high-resolution granulation observations	16
1.7	Chronological summary	18
2	The morphology, evolution and dynamics of the granulation and supergranulation	19
2.1	Introduction	19
2.2	High-resolution observing methods	26
2.2.1	Solar seeing: blurring and image motion	26
2.2.2	Solar seeing and the Earth's atmosphere	29
2.2.3	Elimination of solar seeing effects	35
2.3	Properties of the photospheric granules	38
2.3.1	Shape	38
2.3.2	Diameter and fractional area	39
2.3.3	'Cell size' and total number of granules on the Sun	41
2.3.4	Granular contrast	45
2.3.5	Diversity in size and brightness	47
2.3.6	Lifetime	49
2.3.7	Evolution	50
2.4	Extension of granules into the upper photosphere	53
2.4.1	Granulation near the extreme solar limb	53

Cambridge University Press

978-0-521-11551-3 - The Solar Granulation, Second Edition

R. J. Bray, R. E. Loughhead and C. J. Durrant

Table of Contents

[More information](#)

vi	<i>Contents</i>	
2.4.2	Granule velocities	57
2.5	Statistical properties of the solar granulation	64
2.5.1	Introduction	64
2.5.2	Measurement of the granular brightness distribution	67
2.5.3	Variation of the granular brightness fluctuation with heliocentric angle and wavelength	74
2.5.4	Velocity distributions in the solar photosphere	77
2.5.5	Correlations	82
2.6	Granulation and magnetic fields	85
2.7	The supergranulation	88
2.8	Summary of data	94
3	An introduction to the theory of convection	95
3.1	Introduction	95
3.2	Basic equations and their simplification	97
3.2.1	Notation and units	97
3.2.2	Hydrodynamic equations	97
3.2.3	The anelastic and Boussinesq equations	102
3.3	The Rayleigh problem	108
3.3.1	Introduction	108
3.3.2	Evaluation of the Rayleigh number	110
3.3.3	Extension to stratified fluids	114
3.4	Laboratory convection	116
3.4.1	Introduction	116
3.4.2	The onset of convection	117
3.4.3	The transition to developed convection	119
3.4.4	Turbulent convection	126
3.4.5	Overshoot in laboratory systems	129
3.5	Concluding remarks	136
4	The theory of astrophysical convection	138
4.1	Introduction	138
4.2	Mixing-length convective theories	139
4.2.1	Introduction	139
4.2.2	Simple mixing-length theories	141
4.2.3	Eddy dynamics	146
4.2.4	Non-local mixing-length theories	149
4.3	Generalized theories of astrophysical convection	153
4.3.1	Turbulent viscosity and diffusivity	153
4.3.2	Anelastic convective theories	157
4.3.3	Numerical modelling	163
4.3.4	Physical implications	166
4.4	Radiative heat exchange	169
4.4.1	Introduction	169

Table of Contents

[More information](#)

	<i>Contents</i>	vii
4.4.2	The source function	173
4.4.3	The Eddington and diffusion approximations	176
4.4.4	Radiative smoothing	179
5	Interpretation of the granulation and supergranulation	185
5.1	Introduction	185
5.2	Models of the solar granulation	186
5.2.1	Introduction	186
5.2.2	Empirical inhomogeneous photospheric models	188
5.2.3	Semi-empirical inhomogeneous photospheric models	194
5.2.4	Theoretical granulation models	198
5.3	Interpretation of observed properties of the granulation	206
5.4	Interpretation of the supergranulation	213
5.5	Granulation effects in mean solar line profiles	216
5.5.1	Introduction	216
5.5.2	Shifts and asymmetries of mean solar line profiles	217
5.5.3	Convective origin of mean line profile asymmetry	221
5.6	Stellar granulation	225
	References	229
	Name index	247
	Subject index	251
