Units, constants, and symbols	x
Preface	xi
1 An overview of the solar flare phenomenon	1
1.1 History of observations	1
1.2 Classification of flares	4
1.2.1 X-ray classification	5
1.2.2 Visible light classifications	7
1.3 What does a flare look like?	8
1.4 Stellar flares	16
1.5 Terrestrial effects	17
1.5.1 High-energy photons	17
1.5.2 Energetic protons	18
1.5.3 Shock waves	18
1.5.4 Coronal mass ejections	19
2 Flare spectroscopy	21
2.1 Concepts in radiation transport	21
2.2 Interaction of photons with atoms and electrons	26
2.2.1 Degeneracy of atomic levels	28
2.2.2 Forbidden lines	29
2.2.3 Intermediate coupling	30
2.2.4 Inner shell transitions	31
2.2.5 Dielectronic recombination and auto-ionization	32
2.3 Line profiles	33
2.4 The temperature concept	36
2.5 Line broadening mechanisms	37
2.5.1 Collisional damping	37
2.5.2 Doppler broadening	39
2.6 The differential emission measure	40

vi *Contents*

2.7	Influence of magnetic fields	42
2.7.1	Description of polarized radiation	42
2.7.2	The Zeeman effect	43
2.7.3	The Hanle effect	46
3	Elements of flare magnetohydrodynamics	52
3.1	The Boltzmann equation and its moments	52
3.2	The electrical conductivity and Ohm's law	58
3.3	Maxwell's equations and electromagnetic waves	62
3.4	Waves in a plasma	65
3.4.1	Plasma oscillations	65
3.4.2	Magnetoacoustic waves	68
3.5	The magnetic diffusion equation	70
3.6	Force-free fields	74
3.7	Magnetic buoyancy	76
4	Flare plasma physics	78
4.1	What is a plasma?	78
4.2	Single-particle motions	82
4.3	Adiabatic invariants	86
4.4	Collisional dynamics of particle beams	89
4.5	Kinetic theory and collective effects	95
5	Radiative processes in the solar plasma	103
5.1	Scattering	103
5.2	Radiation from accelerated free electrons	105
5.2.1	Bremsstrahlung	105
5.2.1.1	Nonthermal Bremsstrahlung	108
5.2.1.2	Thermal Bremsstrahlung	113
5.2.1.3	Polarization and directionality	116
5.3	Gyrosynchrotron radiation	116
5.4	Coherent oscillations	120
5.5	Čerenkov radiation	121
5.6	The inverse Compton effect	122
5.7	Nuclear processes	123
5.7.1	Decay of radioactive nuclei and excited stable nuclei	124
5.7.2	Positron annihilation	124
5.7.3	Nuclear interaction (capture, inelastic scattering, and spallation)	125
5.7.4	π^0 decay	127
6	Pre-flare conditions	128
6.1	The concept of an active region	128

<i>Contents</i>	vii
6.1.1 Active-region nomenclature	129
6.1.2 The fundamental loop structure	129
6.2 Possible energy sources	131
6.3 Magnetic fields in active regions	133
6.4 Magnetic energy storage	136
6.4.1 <i>In situ</i> storage	137
6.4.2 Remote energy storage	138
6.5 Precursors and flare buildup	140
6.5.1 Prominence activation	140
6.5.2 Pre-flare heating and brightening	141
6.5.3 Magnetic shear and velocity fields	141
6.6 Bright points and microflares	145
7 The impulsive phase	149
7.1 Energy release	150
7.1.1 Magnetic reconnection	150
7.1.2 Fluid stagnation and the Petschek model	154
7.1.3 Resistive instabilities and the tearing mode	156
7.1.4 Energy dissipation rates	157
7.1.5 Plasma instabilities and anomalous resistivity	159
7.1.6 Topology of the energy-release region and flare models	160
7.1.7 The flare-trigger mechanism	163
7.1.8 Particle acceleration	165
7.1.8.1 Double layers	166
7.1.8.2 Shock acceleration	167
7.1.8.3 Particle acceleration and runaway	169
7.2 Hard X-ray bursts	172
7.2.1 Intensity and spectra	172
7.2.2 Nonthermal models	174
7.2.3 Thermal models	175
7.2.4 Diagnostics	179
7.2.4.1 Spatial structure	180
7.2.4.2 Directivity	185
7.2.4.3 Polarization	187
7.2.4.4 Temporal structure	189
7.2.5 Summary	190
7.3 Microwave bursts	190
7.3.1 Emission mechanisms	191
7.3.2 Observations	194

viii *Contents*

7.4	Gamma-ray bursts	196
7.4.1	Intensity and spectra	197
7.4.2	Implications for particle acceleration	198
7.5	Impulsive EUV bursts	199
7.5.1	Observations	199
7.5.2	Implications for energy transport models	200
7.6	Other impulsive signatures	201
7.6.1	Iron $K\alpha$ radiation	202
7.6.2	Type III radio bursts	202
7.6.3	Particle ejection (e, p, n)	204
8	The gradual phase	206
8.1	Atmospheric response	207
8.1.1	Collisional heating	207
8.1.2	Ohmic heating by reverse current	210
8.1.3	Atmospheric response to beam heating	212
8.1.4	Thermal conduction	214
8.1.5	Radiative transport	216
8.1.6	Mass motions	218
8.2	Flare-loop structure and evolution	218
8.2.1	The high-temperature flare	219
8.2.1.1	Temperature determinations	220
8.2.1.2	Density of the high-temperature plasma	223
8.2.2	The low-temperature flare	224
8.2.2.1	The $H\alpha$ flare	225
8.2.2.2	The temperature minimum region	225
8.2.2.3	White-light flares	226
8.3	Relaxation to the pre-flare state	227
8.3.1	Post-flare loops	227
8.3.2	Relaxation models	228
9	Coronal mass ejections	229
9.1	Flares and prominences	229
9.2	Characteristics of solar mass ejections	231
9.2.1	Velocity	232
9.2.2	Mass and energy	234
9.2.3	Radio signatures of coronal mass ejections	235
9.2.3.1	Type II and IV radio bursts	235
9.2.3.2	Type I noise storms	237
9.2.3.3	Type III radio bursts	239

<i>Contents</i>	ix
9.2.4 Magnetohydrodynamic disturbances	239
9.3 Origin of coronal mass ejections	240
9.3.1 Compression wave model	240
9.3.2 Two-dimensional flux tube models	242
9.3.3 The CME as the result of a global instability	243
Epilogue	245
References	248
Author index	266
Subject index	270
