Contents

List of exhibits	<i>page</i> xvii
Foreword by Unesco	xxv
Preface	
The nature of this book	xxix
An overview of the chapters	xxx
Authors' addresses	xxxiii
Acknowledgments	xxxiv

Part 1: Introduction

1 The International Comparative Study on the Organization and Performance of Research Units: an overview	
<i>Y. de Hemptinne and Frank M. Andrews</i>	3
1 Research on research and development	3
2 Some distinctive features of the International Study	5
3 Theoretical and practical foundations of the study	7
4 Some general findings from the study	9
5 Possible misinterpretations	11
6 Concluding comments	12
References	14
Notes	15
2 The International Study: its data sources and measurement procedures	
<i>Frank M. Andrews</i>	17
1 Introduction	17
2 Nature and sources of the data	18
The six countries	18
The two levels: research units and respondents	18
Criteria for identifying research units	19

Cambridge University Press

978-0-521-11570-4 - Scientific Productivity: The Effectiveness of Research Groups in Six Countries

Edited by Frank M. Andrews

Table of Contents

[More information](#)

vi	<i>Contents</i>	
	The five types of respondents	20
	Unit heads	21
	Staff scientists	21
	Technical support persons	22
	Research administrator data	22
	External evaluators	22
3	Sampling of research units and data-collection procedures	23
	Selection of research units	23
	Definition of subpopulations	23
	Selection of subpopulations	24
	Sampling of research units	25
	What the research units represent	25
	Relationships among Country, Type of institution, and Scientific field	26
	Data collection and processing	28
4	Assessment of unit types and of unit performance	30
	A typology of research units	30
	Measurement of research-unit performance	32
	Basic considerations	32
	Composite output measures	36
	Composite measures of rated effectiveness	38
	Comments on the performance measures	40
	Adjustment of performance measures for Type of unit	43
	Interrelationships among performance measures	45
5	Summary	47
	References	49
	Notes	50

Part 2: Organizational factors and scientific performance

3	Individual publication productivity as a social position effect in academic and industrial research units <i>Karin D. Knorr, Roland Mittermeir, Georg Aichholzer, and Georg Waller</i>	55
1	Productivity and stratification in science	55
2	Data	58
3	Measurement of productivity	59
4	Age, professional experience, and productivity	60

Cambridge University Press

Table of Contents

[More information](#)

<i>Contents</i>	vii
5 Age as a proxy for position in the research laboratory	63
6 Age, task structure, and productivity	67
7 A social-position model of publication productivity	71
8 Control for a scientist's position	77
9 Technological scientists in industrial research units	77
10 Group productivity and its correlates	79
11 Discussion	87
12 Summary	88
References	89
Notes	91
4 Leadership and group performance: a positive relationship in academic research units <i>Karin D. Knorr, Roland Mittermeir, Georg Aichholzer, and Georg Waller</i>	95
1 Previous research	96
2 The leadership role in academic research units	97
3 Data	99
4 Measures employed	100
5 Perception of the supervisor and what it relates to	100
6 Perception of the supervisor and organizational climate	101
7 Supervisory perception, group climate, and performance	103
8 A model including measurement error	105
9 Discussion	111
10 Summary	112
Annex	113
References	114
Notes	117
5 Externally determined resources and the effectiveness of research units <i>Veronica Stolte-Heiskanen</i>	121
1 Introduction	121
Organization of the chapter	122
2 Available resources and their subjective perceptions: the notion of congruency	123
Measurement of objective and subjective resources	124

Cambridge University Press

978-0-521-11570-4 - Scientific Productivity: The Effectiveness of Research Groups in Six Countries

Table of Contents

[More information](#)viii *Contents*

	Material resources	124
	Human resources	125
	Information resources	126
	Construction of congruency indices	127
3	Congruency patterns in different types of research units	130
	Congruency patterns of material resources	131
	Congruency patterns of human resources	132
	Congruency patterns of information resources	134
	General conclusions concerning variations in congruency	135
4	Resources, satisfaction, and the effectiveness of research units	137
	Objective resources, subjective satisfaction, and effectiveness	138
	Patterns of congruency and effectiveness	140
	Comment	143
	Alternative measures of resources and effectiveness	143
	Comments	146
5	Summary and conclusions	147
	References	151
	Notes	151
6	Some problems of research planning: data from Hungary compared to other Round 1 countries <i>Agnes Haraszthy and Lajos Szántó</i>	155
	1 Introduction	155
	2 Analysis results	157
	Planning and organization of research-unit activities	157
	Research themes and projects	158
	Projects	161
	Methods used in research work	165
	3 Conclusion	167
	References	168
	Notes	168
7	Patterns of influence and the performance of research units <i>Salomea Kowalewska</i>	169
	1 Introduction	169
	Organization of the chapter	170
	2 Structure and nature of the data	171

Table of Contents

[More information](#)

<i>Contents</i>	ix
Source of data	171
The control graph	171
Some cautions	172
Interrelationships among the influence measures	173
Construction of influence indices	174
Indices tapping amount of influence	175
Indices tapping distribution of influence	175
Indices tapping differences in viewpoint	176
3 Major hypotheses	176
4 Results	177
Results on the amount of influence	177
Overview	177
Basic results	177
Refinements	180
Comments	181
Implications	181
Results on the distribution of influence	182
Distribution between unit head and other scientists	182
Distribution between the unit and organization leaders	182
Results on differences in viewpoint	184
5 Summary, implications, comments	185
References	187
Notes	188
8 The size and age of Swedish academic research groups and their scientific performance	
<i>Rikard Stankiewicz</i>	191
1 Introduction	191
2 Some earlier investigations	192
3 The choice of data and approach	195
The sample	196
Hypothesis: the effects of group size	197
Hypothesis: the effects of group age	199
An outline of the analysis	199
Definitions of the variables	199
4 Results	200
The overall relationships	200
The stability and strength of the relationships	204
The form of the relationships	211
5 Conclusions and discussion	218
References	220
Notes	221

9	Communication between and within research units <i>Nicole Visart</i>	223
	Framework, limitations, and purposes of the chapter	223
1	Background information	228
	The sample	228
	The measures	228
	Performance measures (communication as “signal”)	229
	Communication as a channel	229
	Perceptual measures (rated data)	230
	Countable measures (discrete data)	231
	Relationships among channel communication measures	231
	Mean levels of the channel communication measures	233
	Contextual measures	235
	Perceptual measures (rated data)	235
	Countable measures (discrete data)	236
	Mean levels of the contextual measures	236
2	Relationships of contextual measures to channel communication	237
	Perceptual dimensions of channel communication	237
	Countable dimensions of channel communication	239
3	Relationships of channel communication to research-unit performance (signal communication)	239
4	Multivariate relationships of channel communication to research-unit performance (signal communication)	243
5	Impacts of some contextual dimensions on relationships between channel communication and research-unit performance (signal communication)	245
6	Overall scheme of relationships among channel communication, contextual dimensions, and performance	247
7	Discussion	248
8	Conclusions for action	249
	Reference	251
	Notes	251

<i>Contents</i>	xi
10 Motivation, diversity, and the performance of research units	
<i>Frank M. Andrews</i>	253
1 Introduction	253
Organization of the chapter	254
2 Motivation and performance	255
Some past research on motivation and scientific performance	255
Measurement of strength of motivation	257
Levels of motivation in different types of respondents and units	257
Types of respondents and motivation levels	258
Types of units and motivation levels	259
Comments	259
Strength of motivation as a characteristic of the research unit	259
Relationships of motivation strength to research-unit performance	261
Further checks on the motivation–performance relationship	265
Discussion and conclusions on motivation and performance	267
3 Diversity and performance	269
Measurement of diversity within research units	271
Comment	274
Interrelationships among diversity measures	274
Relationships between diversity and performance	276
Basic results	276
Supporting analyses	276
Combinations of diversity measures	281
Discussion and conclusions on diversity and performance	282
4 Motivation, diversity, and performance	283
5 Summary	284
References	286
Notes	287

11	Ratings of research-unit performance	
	<i>Joseph Bonmariage, Edmond Legros, and Michel Vessière</i>	293
1	Introduction	293
	Motivations for the chapter	294
	Organization of the chapter	294
	Presentation of the rated-performance measures	296
2	Exploring the meaning of the rated-effectiveness factor scores	300
	Objective and subjective measures	300
	Significance of the rated-effectiveness dimensions	303
	General R & D effectiveness as assessed by staff scientists	304
	General R & D effectiveness as assessed by the unit head	305
	Recognition	305
	Training effectiveness	307
	Applications effectiveness	308
	Social effectiveness	309
	Administrative effectiveness	310
	Comments	311
	Overall appraisal of the rated-performance measures	312
3	Rated-effectiveness scores: sensitivity to context	313
4	Stability of relationships between rated effectiveness and other dimensions	319
5	Summary and conclusions	324
	References	330
	Notes	331
12	The analysis strategy of the Hungarian Research Team and some results on R & D facilities	
	<i>Peter Hunya, Arpad Halász, and Csaba Fajszí</i>	333
1	Introduction	333
2	Analysis	334
	Examination of the variables	334
	Conceptual survey of the variables	334
	Univariate and bivariate statistical analyses	334
	Study of the control variables	334

<i>Contents</i>	xiii
Creation of a refined discipline code	335
Structural analysis and construction of representative measures	336
Conceptual grouping of the variables	336
Empirical analysis	336
Empirical analysis on conceptual clusters	337
Construction of representative measures	338
Overall investigation of the representative measures	340
Control variables and representative measures	341
Effects of Country, Field, and Type of organization	341
Control variables and residualized representative measures	342
Structure of the residualized representative measures	343
Multivariate predictive analysis	344
Respondent level analysis	344
Unit-level analysis	344
Countable output and rated performance	345
Facilities and countable output	345
Country-level analysis	346
A ranking procedure	346
Relations among country rankings based on various composite scores	347
3 Conclusion	348
Annex	350
References	350
Notes	352
13 Classifying research units by patterns of performance and influence: a typology of the Round 1 data	
<i>Gerald A. Cole</i>	353
1 Introduction	353
2 Grouping research units according to scientific field or organizational setting: theoretical considerations and previous investigations	355
Unity in science: the null hypothesis	356
Lines of cleavage: the scientific speciality	357
Interpreting data across scientific fields	358

xiv	<i>Contents</i>	
	Research activities and organizational settings	360
	Summary regarding organizational settings	366
3	Measurement	367
	Classification of research units by Scientific field	367
	Classification of research units by Type of organization	368
	A cross-classification of Scientific field and Type of organization	369
	Indicators of research-unit performance and patterns of influence	370
	Research orientations: the rated-effectiveness measures	372
	Research products: the output items	372
	Patterns of influence: choice of research themes and organization of the work	373
4	Clustering the research units: methods and results	374
	A preliminary check: variations by Pattern-variable categories	374
	Analysis methods	377
	Results of the clustering analysis	379
	Clustering by research orientation	380
	Clustering by research outputs	382
	Clustering by patterns of influence	383
	Defining a Typology of research units	386
	Using the Typology as a statistical control variable	387
	The Typology, Pattern, and Country variables	387
	Alternate versions of the Typology	388
5	A summary of profiles of research orientations, output, and influence for the five Typology categories	389
	Cautionary note	392
6	Summary and conclusions	393
	Annex: verification of the cluster analysis results	394
	References	396
	Notes	400
