

## CONTENTS

<i>Preface</i>	<i>page ix</i>
<b>Chapter 1. INTRODUCTION</b>	<b>1</b>
<b>Chapter 2. ANGULAR MOMENTUM AND RELATED MATTERS</b>	
1 The Hamiltonian for an atomic system	6
2 Orbital angular momentum	8
3 Addition of angular momenta	14
4 The spin of the electron	17
5 Wigner's formula	19
6 Permutations and the Pauli exclusion principle	24
7 The Russell–Saunders coupling scheme	30
8 Vectors, their matrix elements and selection rules	33
<b>Chapter 3. ELECTROMAGNETIC RADIATION</b>	
1 Electromagnetic fields	41
2 Emission and absorption of radiation	52
<b>Chapter 4. THE STRUCTURE OF FREE ATOMS AND IONS</b>	
1 One-electron atoms	58
2 Electron configurations	63
3 Evaluation of the matrix elements $\mathcal{H}_{ij}$	68
4 Slater–Condon parameters	73
5 $p^n$ configurations	79
6 $d^n$ and other configurations	83
7 Fitting parameters to the observed spectrum	96
8 Radial functions and the Hartree–Fock method	102
<b>Chapter 5. MAGNETIC EFFECTS IN ATOMIC STRUCTURE</b>	
1 Spin-orbit coupling	106
2 Examples of calculations of spin-orbit coupling energies	109
3 The nucleus in atomic structure	114
4 Dirac's linear wave-equation for the electron	116
5 Deductions from Dirac's linear wave-equation	122
6 Atoms in external magnetic fields	128
<b>Chapter 6. GROUPS AND THEIR MATRIX REPRESENTATIONS</b>	
1 Rotations and the concept of a symmetry group	135
2 Elementary properties of groups	139
3 The symmetry groups of physics	141
4 Matrix representations of groups	146
5 The direct product of two representations	151
6 The representations of $C_n$ , $D_n$ , $T_d$ , $O$ and $K$	156
7 Relations between representations	161

vi	<b>CONTENTS</b>	
8	Relations between functions belonging to representations	<i>page</i> 164
9	Spinors and spinor groups	169
10	Some mathematical aspects of the groups $R_3$ and $U_2$	176
11	The finite spinor groups and their representations	180
 <i>Chapter 7. COMPLEX IONS</i>		
1	The concept of a complex ion	182
2	Electron configurations	183
3	Evaluation of parameters	189
4	The coupling schemes	191
5	Survey of ligand-field theory	193
 <i>Chapter 8. CRYSTAL-FIELD THEORY AND THE WEAK-FIELD COUPLING SCHEME</i>		
1	The influence of a static environment	195
2	The environment as a classical distribution of charge	199
3	Relationships between potentials for different environments	202
4	Kramers degeneracy	205
5	The Jahn–Teller effect	209
6	Real and complex representations	212
7	Various group-theoretic propositions	216
8	Examples of calculations in the weak-field scheme	219
9	Spin-orbit coupling	222
10	The method of operator equivalents	223
 <i>Chapter 9. THE STRONG-FIELD COUPLING SCHEME</i>		
1	Strong-field configurations and terms	226
2	Electrostatic matrix elements	229
3	Examples	231
4	Pairing energies	237
5	The $p^n$ isomorphism	238
6	Spin-orbit coupling energies	240
7	Holes and particles	245
8	Fractional parentage	256
 <i>Chapter 10. PARAMAGNETIC SUSCEPTIBILITIES</i>		
1	Van Vleck's theorem	265
2	Susceptibilities of ground terms of $d^n$ configurations	269
3	Residual paramagnetism	278
4	More accurate treatments	279
 <i>Chapter 11. OPTICAL SPECTRA AND THERMODYNAMIC PROPERTIES</i>		
1	Introduction to $d^n$ spectra	286
2	Intensities	288
3	Coupling of nuclear and electronic motions	292
4	Spectra of the aqueous aquo-ions	301
5	Further examples of spectra	305
6	The cobaltic ion	312
7	Thermodynamic properties	315

## CONTENTS

vii

*Chapter 12.* PARAMAGNETIC RESONANCE

1	Electron resonance	<i>page</i> 320
2	Refinements to the Hamiltonian	322
3	The spin-Hamiltonian	330
4	Survey of electron resonance measurements	340
5	Nuclear magnetic resonance in cobaltic compounds	374

## APPENDICES

1	The elements	378
2	Tables	382
3	Summary of relevant parts of perturbation theory	428
4	The Hamiltonian for a charged particle in an electromagnetic field	432
5	Gauge invariance in perturbation theory	434
6	Atomic spectral parameters	437
7	Deductions from Wigner's formula	440
8	L.C.A.O. theory	443
9	Symmetry of the coupling coefficients for the octahedral group	446
