<i>Preface</i>	<i>page</i> ix
<i>Acknowledgements</i>	xiii
1 Calculus and linear algebra	1
1.1 The number line R	1
1.2 The basic infinitesimal spaces	3
1.3 The KL axiom scheme	11
1.4 Calculus	16
1.5 Affine combinations of mutual neighbour points	24
2 Geometry of the neighbour relation	27
2.1 Manifolds	27
2.2 Framings and 1-forms	37
2.3 Affine connections	42
2.4 Affine connections from framings	51
2.5 Bundle connections	56
2.6 Geometric distributions	60
2.7 Jets and jet bundles	71
2.8 Infinitesimal simplicial and cubical complex of a manifold	78
3 Combinatorial differential forms	81
3.1 Simplicial, whisker, and cubical forms	81
3.2 Coboundary/exterior derivative	90
3.3 Integration of forms	95
3.4 Uniqueness of observables	104
3.5 Wedge/cup product	108
3.6 Involutive distributions and differential forms	112
3.7 Non-abelian theory of 1-forms	114
3.8 Differential forms with values in a vector bundle	119
3.9 Crossed modules and non-abelian 2-forms	121

4	The tangent bundle	124
4.1	Tangent vectors and vector fields	124
4.2	Addition of tangent vectors	126
4.3	The log-exp bijection	128
4.4	Tangent vectors as differential operators	133
4.5	Cotangents, and the cotangent bundle	135
4.6	The differential operator of a linear connection	137
4.7	Classical differential forms	139
4.8	Differential forms with values in $TM \rightarrow M$	144
4.9	Lie bracket of vector fields	146
4.10	Further aspects of the tangent bundle	150
5	Groupoids	154
5.1	Groupoids	154
5.2	Connections in groupoids	158
5.3	Actions of groupoids on bundles	164
5.4	Lie derivative	169
5.5	Displacements in groupoids	171
5.6	Principal bundles	175
5.7	Principal connections	178
5.8	Holonomy of connections	184
6	Lie theory; non-abelian covariant derivative	193
6.1	Associative algebras	193
6.2	Differential forms with values in groups	196
6.3	Differential forms with values in a group bundle	200
6.4	Bianchi identity in terms of covariant derivative	204
6.5	Semidirect products; covariant derivative as curvature	206
6.6	The Lie algebra of G	210
6.7	Group-valued vs. Lie-algebra-valued forms	212
6.8	Infinitesimal structure of $\mathfrak{M}_1(e) \subseteq G$	215
6.9	Left-invariant distributions	221
6.10	Examples of enveloping algebras and enveloping algebra bundles	223
7	Jets and differential operators	225
7.1	Linear differential operators and their symbols	225
7.2	Linear displacements as differential operators	231
7.3	Bundle-theoretic differential operators	233
7.4	Sheaf-theoretic differential operators	234

<i>Contents</i>		vii
8	Metric notions	239
8.1	Pseudo-Riemannian metrics	239
8.2	Geometry of symmetric affine connections	243
8.3	Laplacian (or isotropic) neighbours	248
8.4	The Laplace operator	254
	Appendix	261
A.1	Category theory	261
A.2	Models; sheaf semantics	263
A.3	A simple topos model	269
A.4	Microlinearity	272
A.5	Linear algebra over local rings; Grassmannians	274
A.6	Topology	279
A.7	Polynomial maps	282
A.8	The complex of singular cubes	285
A.9	“Nullstellensatz” in multilinear algebra	291
	<i>Bibliography</i>	293
	<i>Index</i>	298
