<i>Glossary of abbreviations in text and annexes</i>	xiii
<i>Glossary of abbreviations in appendices</i>	xvi
<i>Preface</i>	xix
1 The scientific background	1
1 Ionospheric research in Britain	1
2 The Gassiot Committee of the Royal Society and atmospheric research	4
2.1 The sub-committees of the Gassiot Committee	6
3 The American Upper Atmosphere Research Panel	6
4 Proposal for a conference on rocket exploration of the upper air	7
2 The technical background	9
3 The initiation of the Skylark rocket programme – the IGY and artificial satellites	16
1 Prelude to the conference – an offer of rockets	16
2 The Oxford Conference	18
3 Initiation of a rocket programme	18
4 Advice on the rocket programme – Gassiot Sub-committee D	20
5 The first grant applications	20
6 Arrangements at Woomera	21
7 The Skylark rocket and its development	23
8 The first Skylark flights	26
9 First experiments carried out in the Skylark programme	28
9.1 The grenade experiment	28
9.2 The window experiment	29
9.3 The sodium glow experiment	30
9.4 Optical measurement of the intensities of night and day airglow lines as functions of altitude	31

vi	<i>Contents</i>	
	9.5 Measurement of electron concentration as a function of altitude by the dielectric method	31
	9.6 Mass spectrometers to study ion composition in the ionosphere	32
	9.7 Observation of short-wave solar radiation	32
10	Later development of the Skylark	33
11	The International Geophysical Year	34
12	The Artificial Satellite Sub-committee	37
	12.1 What to do about tracking American satellites	38
13	The Russians steal the show	38
14	British observers take advantage of Soviet satellites	39
15	Working groups of the artificial satellite sub-committee	41
16	Central satellite facility	42
17	Further satellite developments – mainly but not exclusively American	43
18	Looking to the future	44
19	Contribution by British scientists to IGY research using rockets and satellites	45
20	Results obtained from observation of earth satellites	49
	4 Post-IGY developments – NASA – COSPAR – British National Committee for Space Research – British satellite experiments	54
1	The National Aeronautics and Space Administration (NASA) in the USA	54
2	The Committee on Space Research (COSPAR)	58
3	The British National Committee for Space Research	62
	3.1 Activities of TADREC	64
4	The key question – British satellites?	64
5	A national launching system or international collaboration?	65
6	The US offer	69
7	The overall organization for space science	72
8	Further development of launching systems	73
	5 The Ariel programme	74
1	General co-operative arrangements	74
2	The first payload	75
3	Meeting the satellite requirements	77
4	Tracking and data acquisition	78
5	Preparation of scientific equipment	80
6	The planned orbit – observation of the first phase	80
7	The launching of S-51	82
8	Subsequent life of Ariel 1	87
9	Scientific results from Ariel 1	87
10	The second Ariel satellite	91

<i>Contents</i>	vii
11 The Space Research Management Unit	93
12 The launching of Ariel 2	95
13 Ariel 3	96
14 Ariel 4	102
15 Ariel 5	103
16 Ariel 6	106
6 The European Space Research Organization	108
1 The commencement of European discussions	109
2 Early UK reactions	110
3 Informal meeting in London, April 1960	111
4 Provisional European space research group – proposed preparatory commission	114
5 Technical discussion meeting, London 3–6 October, 1960 – proposed technical organization	115
6 UK decision to join preparatory commission	117
7 General inter-governmental meeting – preparatory commission established	118
8 Satellite launcher development in Europe – beginnings of ELDO	119
9 Progress of the preparatory commission	120
10 UK overall space science programme – agreed financial limits	123
11 Progress towards the establishment of ELDO	124
12 ESRO – the financial protocol	125
13 The selection of sites for ESRO establishments	126
14 ESRO network of tracking and telemetry stations	132
15 The organisation of ESRO and its establishments – senior staff appointments	132
16 Signature of the ESRO Convention and its ratification	136
17 The first Council meetings	138
18 The initiation of the scientific programme of ESRO	139
19 The sounding rocket programme	140
20 Small spin-stabilized satellites	142
21 The first deep space probe – HEOS 1	146
22 The small stabilized satellites TD-1 and TD-2	146
23 The two large projects	151
24 The first large project (LAS)	152
25 The second large project	161
26 The Bannier Committee and the re-organization of ESRO	161
7 Commonwealth co-operation in space research	163
1 Royal Society Meeting on Commonwealth co-operation in space science	164
1.1 Co-operation in satellite tracking and telemetry reception	164

viii	<i>Contents</i>	
	1.2 Canadian topside sounder satellite	165
	1.3 Co-operation in research using rockets	166
	1.4 Co-operation in research using earth satellites	167
2	The Commonwealth Consultative Space Research Committee	167
3	The use of small rockets	167
4	Developments in India and Pakistan	168
5	Possibility of a Commonwealth synoptic rocket programme	169
6	Proposal for a conference of Commonwealth space scientists	171
7	The Colombo Conference	172
8	Contribution to conference recommendations from the UK	174
9	The Commonwealth co-operative programme in operation	174
8	Smaller rockets for scientific purposes – Skua and Petrel	177
1	The scientific case	177
2	The payload specification and other design features	180
3	The technological background	181
	3.1 The rocket vehicle	181
	3.2 Ranges and range safety	182
	3.3 Instrumentation	182
	3.4 Buildings	182
	3.5 Costs	182
4	Alternative ways ahead	183
5	The development of Skua	184
6	The development of Petrel	185
7	The main characteristics of Petrel 1	190
8	The Fulmar rocket	190
9	Attitude controlled Skylark rockets	192
1	The scientific case	192
2	The engineering approach	194
3	Uncontrolled sky scanning	194
4	Further engineering developments	196
5	The UK Atomic Energy Authority interest in stabilized rockets	197
6	The RAE proposals for a staged programme of development	198
7	Technical features of Stage 1	200
8	The first three launchings of Stage 1	200
9	The Stage 3 stabilization system	203
10	The development of Stage 5, the star pointing system	205
	10.1 The test flights of Stage 5	206
11	The final stages	208
10	The Trend Committee and the Science Research Council	210
1	The Trend Committee	210

<i>Contents</i>	ix
2 The problem of 'big science'	211
3 Royal Society discussions and proposals	213
4 The Trend Committee Report	214
5 The Science Research Council and space science	216
6 Beyond the SRC	220
7 Further changes in the SRC organization	221
8 The Radio and Space Research Station	222
9 Space science and astronomy	222
11 The transformation of ESRO into ESA	225
1 The European Launcher Development Organization	226
2 Problems for ESRO	228
3 The British view	230
4 The growing crisis in European space policy	230
5 The international policy of NASA relevant to Europe	230
6 The Puppi proposals	232
7 Changes in the ESRO organization following the 1971 package deal	234
8 The genesis of the European Space Agency	235
9 The ESA Convention and space science	237
10 The ESA organization	239
11 New space science programmes	240
12 The Space Science Committee for Europe	244
1 The formation of the Provisional Space Science Board for Europe	244
2 Incorporation in the ESF – the Space Science Committee	247
3 Early activities of the PSSB and SSC – the ESA Convention	248
4 The space telescope	249
4.1 The Williamsburg meeting	251
4.2 The Science Institute and related matters	253
5 Other activities of the Provisional Committee – the Spitzingsee Conference	255
6 The future of the SSC – establishment as a Standing Committee of the ESF	257
6.1 Planetary science in Europe	258
13 Scientific studies by British space scientists – figure of the earth and the neutral atmosphere	260
1 The analysis of satellite orbits	261
1.1 Orbit determination	261
1.2 Air density	263
1.3 Atmospheric rotation	266
1.4 Figure of the earth	267

x	<i>Contents</i>	
	1.5 Variation of the gravitational potential with longitude	269
2	The neutral atmosphere studied by rocket techniques	271
	2.1 The atmosphere below 100 km	271
	2.2 Structure of the neutral atmosphere above 100 km	277
	2.3 Other middle-atmosphere measurements	281
3	Remote sounding from satellites with infra-red sensors	281
4	Atmospheric composition	287
5	Airglow studies	290
6	Micrometeoroids	292
7	Lunar and planetary observations	293
	7.1 The Venus temperature probe	293
	7.2 Lunar samples analysis	294
	7.3 Ground-based planetary studies	295
14	Scientific studies by British space scientists – the ionosphere, the magnetosphere and cosmic rays	297
1	Ways and means	297
2	Results obtained in ionosphere studies	307
	2.1 Topside ionosphere	307
	2.2 The ionosphere between 150 and 200 km	315
	2.3 Mid-latitude sporadic E layers	317
	2.4 The equatorial electrojet	319
	2.5 The D region	320
	2.6 The aurora and the polar ionosphere	323
3	Low-frequency radio noise	326
4	Medium-frequency terrestrial radio noise	331
5	Particles and magnetic fields in the magnetosphere and beyond	333
6	Cosmic rays	336
15	The contribution from British space scientists to astronomy	339
1	Solar X-ray and ultra-violet astronomy	339
	1.1 Use of stabilized Skylarks	343
	1.2 Solar eclipse observations	345
	1.3 Results from satellite experiments	348
2	Cosmic ultra-violet astronomy	353
	2.1 LAS → UVAS → IUE	355
	2.2 Results obtained with the UV scan experiment on TD-1	360
	2.3 Results from IUE	362
3	Cosmic X-ray astronomy	366
	3.1 Results from rocket experiments	370
	3.2 Observations from Copernicus	373
	3.3 Observations from Ariel 5	380
	3.4 Ariel 6	387

<i>Contents</i>	xi
4 Gamma-ray astronomy	388
5 Infra-red astronomy	389
16 Concluding remarks	390
Appendices	393
A1 National Space Science Programme of unstabilized Skylark rockets	393
A2 Programme of attitude controlled Skylark experiments	406
B British experiments and British/Commonwealth co-operative experiments in Petrel, Fulmar and Skua rockets	414
C Experiments in the Ariel series of satellites and in the British-launched Prospero satellite	429
D British experiments in ESRO sounding rockets and in ESRO/ESA scientific satellites	431
E British participation in international co-operative sounding rocket experiments and international spacecraft	437
F Details of the principal UK space science groups 1982	444
G The changes in the value of money	447
Annexes	448
1 Discussion on observations of the Russian artificial earth satellites and their analysis	448
2 Charter of COSPAR	449
3 UK participation in research with artificial satellites. Paper by H.S.W. Massey	455
4 Formal offer of international co-operation by the USA through COSPAR	462
5 Parliamentary statement about a British contribution to space research	463
6 Governmental exchange of notes between the UK and the USA on co-operation in space research.	464
7 European space research meeting to initiate co-operation	467
8 Outline proposals by scientists for a co-operative European programme	469
9 Formal agreement setting up a Preparatory Commission	475
10 Financial protocol of the European Space Research Organization	479
11 Report on location of ESRO headquarters and establishments	480
12 Need for basic studies in support of space science. Statement by H.S.W. Massey	487
13 Memorandum of understanding between agencies of Pakistan, the UK and the USA	488
