ARCHAEOLOGY and the SOCIAL HISTORY of SHIPS 2nd Edition

Maritime archaeology deals with shipwrecks and is carried out by divers rather than diggers. It embraces maritime history; analyzes changes in shipbuilding, navigation, and seamanship; and offers fresh perspectives on the cultures and societies that produced the ships and sailors. Drawing on detailed past and recent case studies, Richard A. Gould provides an up-to-date review of the field that includes dramatic new findings arising from improved undersea technologies.

This second edition of *Archaeology and the Social History of Ships* has been updated throughout to reflect new findings and new interpretations of old sites. The new edition explores advances in undersea technology in archaeology, especially remotely operated vehicles. The book reviews many of the major recent shipwreck findings, including the *Vasa* in Stockholm, the Viking wrecks at Roskilde Fjord, and the *Titanic*.

RICHARD A. GOULD is emeritus professor of anthropology at Brown University. In addition to writing articles for numerous journals, including *American Antiquity* and *The International Journal of Nautical Archaeology*, he has contributed to several edited volumes, among them *Encyclopedia of Underwater and Maritime Archaeology* and *The Oxford Companion to Archaeology*. He is the author or editor of 12 books, including *Disaster Archaeology*, *Recovering the Past*, *Shipwreck Anthropology*, and *Living Archaeology*.

ACKNOWLEDGMENTS

As a relative newcomer to the field of underwater archaeology, I benefited more than usual from the help and advice of friends and colleagues as I labored on this book. Sometimes the learning experience was exhilarating; at other times it was humbling. Researching and writing this book was a voyage of sorts. First I had to get my “sea legs” and acclimate myself to previously unfamiliar surroundings. In my previous academic existence I was a prehistorian and ethnoarchaeologist. I had never been a sport diver, and, indeed, the idea of becoming one had never crossed my mind until I met Keith Muckelroy in Cambridge in 1977. We were both writing books for Cambridge University Press then and shared the same editor, so we wound up conversing in the waiting room (and later in the pub) more than once. It was Keith, more than anyone else, who planted the idea in my mind that underwater archaeology had scholarly legitimacy beyond the arcane details of nautical history and technology. As a student of David Clarke, a pioneer in England of analytical and anthropological approaches to archaeology, Keith’s point of view was clear and understandable. His book *Maritime Archaeology* (1978) led the way in this direction for underwater archaeology. Thirty years later, Keith’s intellectual influence on my book will be apparent to anyone familiar with his earlier work, although a lot has happened since then. So I want to lead off my acknowledgments with a special nod to Keith’s memory for the stimulation and encouragement he provided at the beginning of this voyage.

Several institutions have aided and supported the efforts leading to this book. Special thanks go to both the Western Australian Museum

in Perth and the Western Australian Maritime Museum in Fremantle. In Perth, Charlie Dortch introduced me to submerged terrestrial-site archaeology in Australia. Our dives together at Lake Jasper imparted a sense of reality to this kind of underwater archaeology that no amount of perusal of the literature could ever convey. Graeme Henderson, Jeremy Green, and Mike McCarthy were unstinting in their advice and support and communicated a sense of direction and purpose for their discipline that is not always found in other institutions. This same sense of purpose was echoed by Ian MacLeod, Myra Stanbury, Corioli Souter, Patrick Baker (whose “photo tips” were invaluable), and everyone else on the staff of the Western Australian Maritime Museum. I also wish to thank Mark Staniforth at Flinders University, Adelaide, South Australia, for introducing me to the ships’ graveyard near Port Adelaide and to some of the finer points in ship reuse and discard. The work done by Brian Gohacki, then a graduate student of anthropology at Brown University, on the wreck of the *Omeo* near Fremantle deserves special mention for alerting me to how much ships can change during their use-lives.

Special thanks go, too, to the Submerged Cultural Resources Unit of the National Park Service (now renamed the Submerged Resources Unit). Dan Lenihan and Larry Murphy, in particular, coached me in the skills of underwater-site recording and imparted a high level of professionalism while doing so. It was always a pleasure as well as a learning experience to work with their teams in places like Cape Cod, Massachusetts, and the Dry Tortugas, Florida. Their level of support for our research in the Dry Tortugas from 1989 through 1995 deserves special mention. More recently, critical advice and comments by David Conlin, current chief of the unit, and Matt Russell have helped me appreciate the recent work on the CSS *Hunley* and other underwater activities of the National Park Service. I wish to note especially the memory of Brenda Lanzendorf, maritime archaeologist for the National Park Service at Biscayne National Park, Florida, for introducing me to the wrecks there and for showing me new ways to connect scholarship and public service.

I also wish to express my gratitude for the generous advice and support of the Bermuda Maritime Museum (BMM), especially from Edward Harris, director. Special thanks go, too, to the memory of Jack Arnell, Rowan Sturdy, and Douglas Little at the BMM as well as to

Eugene T. Rowe, one of our most dedicated volunteers in Bermuda and the Dry Tortugas. Other outstanding volunteers included William May, Nan Godet, Donna Souza, Steve Lubkemann, and Rebecca Upton. None of our work in Bermuda from 1987 to 2000 would have been possible without the generous support of Earthwatch and the splendid volunteers they recruited for our field projects. On the subject of dedicated volunteers, special mention should also be made of the Maritime Archaeology and Historical Society (MAHS) of the Washington, D.C., area and the Bermuda Sub-Aqua Club.

Several visits to Texas A&M's Institute of Nautical Archaeology (INA) and Department of Anthropology conveyed fresh ideas to me about both the conduct and the substance of maritime archaeology. Special thanks go to Donny Hamilton, George Bass, Kevin Crisman, Luis Felipe Vieira de Castro, and the late J. Richard Steffy who encouraged me on these occasions. Visits to East Carolina University and discussions with Nathan Richards there produced similarly useful insights. My visits to the Viking Ship Museum in Roskilde, Denmark, and to the Vasa Museum in Stockholm, along with conversations with Carl Olof Cederlund during a conference in Fremantle, helped me focus on current issues in Baltic maritime archaeology. Others who have helped with their advice and suggestions include Rodger Smith, Ben Finney, Daniel Martinez, James Delgado, Stuart Frank, Ray Sutcliffe, Fred Lipke, Patrick Malone, Jim Smailes, Iain Stuart, Christian Ahlström, Fred Walker, James Bellingham, Peter Veth, Philip N. Thomas, and David Lyon. I take full responsibility, however, for the statements and conclusions presented in this book. Also, unless specifically stated otherwise, all photographs used in this book were taken by me.

Finally, profuse thanks go to my wife, Elizabeth Gould, for her editorial expertise and professional attention to detail on the final version of the manuscript. Bravo!

Richard A. Gould
