Acknowledgements

I am greatly indebted to very many people for their contributions to this book. Firstly, I am grateful to those people who gave generously of their time and opinions in interviews – they number more than one hundred. Secondly, I am grateful to individuals who have commented on draft texts and who have contributed ideas. Here I should mention Clark Bullard, Charles Komanoff, Andrew Reynolds and Eli Roth who were particularly important sources of ideas. Thirdly, I would like to mention my colleagues in the Science Policy Research Unit Energy Programme particularly Gordon MacKerron, but also Sonja Boehmer-Christiansen, John Cheshire, Jim Skea, John Surrey and William Walker. Despite an endless flow of drafts demanding comments, they have continued to provide stimulating and challenging comments. Fourthly, I must thank relatives and friends for their continuing encouragement and interest. Finally I must thank Eunice Surtees-Hornby whose patience and typing skills made the final report possible, and Jane Whittingham who compiled the index.

The book has been made possible by a grant from the Science Research Council and subsequent support from the Economic and Social Research Council.
