PREFACE

Long-lived phosphorescence had been known for almost a century before G. N. Lewis and M. Kasha showed in 1944 that it was associated with an energy state which was paramagnetic. The paramagnetism of this state was investigated in a much more detailed way by C. A. Hutchison Jr. and B. W. Mangum in 1958 using the techniques of electron paramagnetic resonance. Also in 1958 R. Williams discovered delayed fluorescence. A number of scientists discovered that this strange fluorescence may be attributed to triplet-triplet annihilation, thus initiating still another new line of triplet state research the full exploration of which is still under way.

Thus, research into all aspects of the triplet state has been actively pursued for more than two decades. Even so, few of the basic questions posed concerning it have received definite answers. That there is still much to be done is indicated by many gaps in our knowledge. For example, accurate determinations of such basic quantities as singlet-triplet and triplet-triplet extinction coefficients have yet to be made. On the theoretical side an adequate analysis of such molecular properties as the intersystem crossing rate constant is still lacking.

The wide variety of techniques being applied to the study of the triplet state and the present rapid increase in the type of problems associated with it suggested that it might be useful to review our understanding of the triplet state and to perhaps chart a course for future investigation. To this end the Symposium on the Triplet State was held at the American University of Beirut in the Republic of Lebanon from 14 to 19 February 1967.

This volume contains most of the papers presented at the Symposium. Those papers received after the publisher's deadline (which was quite early in an attempt to make this volume generally available as soon after the Symposium as possible) are represented by abstract only.

This Symposium was one of the events held in celebration of the Centennial of the American University of Beirut, founded in 1866 as the Syrian Protestant College.

The Organising Committee wishes to acknowledge the financial help of the American University of Beirut and of the Research Corpo-

CONTENTS

Preface	<i>page</i> v
List of participants	xi
Section 1. Spin-orbit coupling and intersystem crossing	
<i>H. F. Hameka</i> †: Spin-orbit interactions in organic molecules	1
<i>G. Castro et al. (Hochstrasser)</i> : Singlet-triplet transitions in organic molecules	29
<i>W. Siebrand</i> : Triplet decay and intersystem crossing in aromatic hydrocarbons	31
<i>J. S. Avery</i> and <i>J. C. Packer</i> : Statistical aspects of resonance energy transfer	47
DISCUSSION	59
Section 2. Magnetic resonance and magnetic interactions	
<i>C. A. Hutchison Jr.</i> : Magnetic resonance spectra of organic molecules in triplet states in single crystals	63
<i>J. H. van der Waals</i> and <i>M. S. de Groot</i> : Magnetic interactions related to phosphorescence	101
<i>M. Schwoerer</i> and <i>H. C. Wolf</i> : ESR investigations of naphtha- lene- <i>d</i> ₈ :Naphthalene- <i>h</i> ₈ mixed crystals	133
<i>H. Lemaire</i> and <i>A. Rassat</i> : Biradicals and polyyradicals in the nitroxide series	141
<i>C. K. Jen et al.</i> : Changes induced in the phosphorescent radia- tion of aromatic molecules by paramagnetic resonance in their metastable triplet states	144
<i>J. S. Vincent</i> : Paramagnetic resonance of the triplet state of tetramethylpyrazine	163

† Italic indicates the author who delivered the paper, and to whom discussion was directed.

CONTENTS

<i>M. Sharnoff</i> : On magnetic dipole contributions to the intrinsic $S_0 \rightleftharpoons T_1$ transition in simple aromatics	page 165
DISCUSSION	171
Section 3. Photochemistry	
<i>R. E. Kellogg</i> : The kinetics of energy transfer from the triplet state in rigid solutions	181
<i>R. B. Cundall et al.</i> : Triplet states in gas-phase photochemistry	183
<i>S. Siegel</i> and <i>H. S. Judeikis</i> : Biphotonic photochemistry, involving the triplet state: polarisation of the effective $T-T$ transition and solvent effects	195
<i>J. Joussot-Dubien</i> and <i>R. Lesclaux</i> : Direct and sensitised photo-oxidation of aromatic hydrocarbons in boric acid glass	197
DISCUSSION	207
Section 4. Radiationless transitions	
<i>G. W. Robinson</i> : Radiationless transitions in gaseous benzene	213
<i>M. W. Windsor</i> and <i>J. R. Novak</i> : Low-lying excited triplet states and intersystem crossing in aromatic hydrocarbons	229
<i>D. L. Dexter</i> and <i>W. B. Fowler</i> : De-excitation rates of triplet states in condensed media	237
<i>B. Stevens et al.</i> : Lifetimes of the triplet state of aromatic hydrocarbons in the vapour phase	239
DISCUSSION	259
Section 5. Triplet excitons	
<i>S. A. Rice</i> : Some comments on the properties of triplet excitons in molecular crystals	265
<i>H. Haken</i> and <i>G. Strobl</i> : Exact treatment of coherent and incoherent triplet exciton migration	311
<i>J. Kommandeur</i> and <i>G. T. Pott</i> : Magnetic susceptibility of a system of triplet excitons: Würster's Blue Perchlorate	315
