 linear programming, 46–7
 linear regression, 33, 36, 176, 252–3, 286, 298
 linearity defined, 154–5, 175–6

SUBJECT INDEX

377

- location models
 floorspace, 75–8, 321–2, 327
 industrial, xxiv, 48, 314–15, 321, 327, 336
 residential, 39–43, 45–6, 56, 58–62, 70, 94–6, 136–8, 199–205, 210, 216–17, 227–9, 257–89, 302–4, 314, 324, 328
 service centre, 56, 58–62, 70, 94–6, 136–7, 210–11, 289–90, 301, 323, 324
 shopping, 42, 44, 148–50, 289–90
 location of modelling projects, 80, 83
 locational attraction, 84, 96, 114, 134, 148–9, 152, 215–17, 293, 296, 356
 log normality, 144
 log probability, 144–5
 log transformation, 117, 119, 238, 243–4, 249
 logistic growth, 305
 loops, feedback, 332
 Los Angeles model, 47
 Lowry model, 7–8, 13–14, 55–64, 79–80, 85, 208, 290, 300, 303, 321
 Lowry's paradigm, 22–3
- McLaurin's theorem, 178
 macro-scale, 13, 21–2
 marginal change, 93
 marginal probability, 179–82, 201
 marginal utility, 259, 260–1
 markets, 258, 263
 mathematical programming, 159, 357
 matrix operators, 34, 71–4, 84, 187, 222, 309
 inverse of, 34, 72–4, 77, 187, 222
 norm of, 73–4
 maximisation of
 entropy, 44–6, 151, 180, 216, 235, 265, 269, 289
 utility, 258–61, 279–80, 288–9
 maximum likelihood
 method of, 175, 180–5, 200, 202
 equations of, 182–5, 200–2, 263–6, 274
 means
 arithmetic, 88, 268
 trip benefit, 184
 trip length, 89, 91, 119, 126, 139, 142, 155–6, 166, 184, 213–14, 220–2, 226, 242, 248–9
 median trip length, 223–4
 micro-scale, 13, 21–2, 257–8
- migration
 external, 95–6, 98–9
 internal, 95–6, 105–7, 131
 flow, 96, 107, 134–6, 348–9, 351
 survey, 98–9
 Milton Keynes model, 80
 minimum requirements method, 114
 modal trip length, 223–4
 model design, process of, 15–18
 models
 Activity Allocation, 64–70, 79–80, 209–12, 288–90, 303–4
 analytic, 14, 294, 350
 as a laboratory, 4
 attraction-constrained, 39, 41
 classification of, 11–15
 continuous, 257
 coupling of, 52, 60, 75, 79, 84
 critique of, 353–4
 density, 213–14, 223–4, 248–9, 260–2
 discrete, 257
 doubly-constrained, 38–9, 46–7, 257, 287, 326, 338, 341
 dynamic, 113, 47, 62–3, 92, 130, 208, 292–352
 early history of, xxiv, 7–11, 257, 293
 econometric, 51, 257–8, 308
 economic base, 24–34, 55–6, 63, 71, 290, 298, 308
 families of, 37, 79–81
 first-generation, 7–11, 15
 floorspace, 75–8, 321–2, 327
 Garin's, 63–4, 70–4, 75
 general, xxiv, 12, 20–1, 52
 gravity, 6, 35
 hierarchical, 227, 240–6, 308, 310, 313, 320
 housing market, 47, 257–9
 industrial location, xxiv, 48, 314–15, 321, 326, 327
 input–output, 33–4, 73, 254
 intervening-opportunity, 37, 42–3, 52–4
 linear, 8, 14, 51–2, 298–300
 Lowry's, 7–8, 13–14, 55–64, 79–80, 85, 208, 290, 300, 303, 321
 non-linear, 14, 20–81, 147–232, 257–91
 operational, 256–7
 optimisation, 12–13, 159
 partial, xxiv, 12, 20–1, 147
 partially-constrained, 39–40

- models (*cont.*)
- performance of, 90–2, 119–29, 225–6, 230, 253, 276–88, 337–8

SUBJECT INDEX

381

- technocracy, 354
 Teeside model, 150
 terminology, xxii–xxiii, 11–15
 testing, sensitivity, 128–9, 139–44, 307–8, 337–48
 theorems
 McLaurin's, 178
 Taylor's, 173, 177, 187, 222
 theoretical geography, 232–3
 theory
 economic base, 24–34, 55–6, 63, 71, 290, 298, 308
 entropy, 44–6
 general systems, 5
 geographic, 232–3
 graph, 246–7
 information, 236–7
 urban, 2–3, 22–3, 257, 355
 utility, 44, 233, 258–61
 time, computation, 155, 163, 186, 188–9, 195, 197, 202–3, 205–6, 217, 235, 355–6
 time–distance, 87, 115–16
 TOMM model, 7–8, 62–3, 137, 300–3, 310, 314
 topological partitions, 136
 trajectories, 95–6, 103, 105
 transformations, 117, 175–7, 187, 199, 238, 243–4, 247, 249
 transport cost, 7, 45, 84
 transport models, xxiv, 38–9
 transport planning, 6–7
 Transport Tables, 202
 trial and error calibration, 89, 155
 trip distribution models, 38–9, 46–7, 69, 251, 287, 326, 338, 341
 two-stage calibration, 116–27
 Tyne–Wear model, 79–80

 unconstrained gravity model, 234, 269
 unconstrained optimisation, 159
 undeveloped land, 122–3, 136

 unemployment, 97–9, 307
 unimodality, 159, 165, 192, 195
 uniqueness of calibration, 172
 univariate search, 159–63
 Upper New York State model, 8–9, 12, 52–5
 Urban Dynamics, 306–7, 310
 urban economics, 6–7, 259–61
 urban processes, 292
 urban theory, 2–3, 22–3, 257, 355
 utility
 function, 259–63
 marginal, 259, 260–1
 maximising, 258–61, 279–80, 288–9
 theory, 44, 233, 258–61

 validation, 356
 variables defined
 endogenous, 14, 299
 exogenous, 14, 299
 extensive, 215–17
 intensive, 215–17
 variance, 223–4, 267–8

 white collar workers, 272–4
 within-place interaction, 23
 workers
 blue collar, 272–4
 professional, 272–4
 white collar, 272–4
 Workplace Tables, 86, 113–14

 zonal subsets, 39–40, 56–8, 64, 75
 zone centroids, 85, 112, 248–9
 zone shape, 231
 zones
 dummy, 92, 209, 227–31, 233
 homogeneity of, 85, 112, 235
 zoning systems, xxiv, 80–1, 84–6, 111–13, 154, 208, 217–20, 231–2, 270–1, 335, 356
