

## Contents

<i>Preface</i>	<i>page vii</i>
<b>1 Oscillations over long times in numerical Hamiltonian systems</b> <i>E. Hairer &amp; C. Lubich</i>	1
1 Introduction	1
2 Backward error analysis	3
3 Modulated Fourier expansion	7
4 Nonlinear wave equation	16
5 Linear multistep methods	19
<b>2 Highly oscillatory quadrature</b> <i>D. Huybrechs &amp; S. Olver</i>	25
1 Introduction	25
2 Asymptotics	28
3 Filon method	33
4 Levin collocation method	39
5 Steepest descent methods	43
6 Other methods	46
<b>3 Rapid function approximation by modified Fourier series</b> <i>D. Huybrechs &amp; S. Olver</i>	51
1 Introduction	51
2 Univariate approximation	53
3 Polyharmonic approximation	60
4 Multivariate approximation	62
5 Convergence acceleration	66
6 Concluding remarks	69
<b>4 Approximation of high frequency wave propagation problems</b> <i>M. Motamed &amp; O. Runborg</i>	72
1 Introduction	72
2 Geometrical optics	74

3	Geometrical theory of diffraction	82
<b>5</b>	<b>Wavelet-based numerical homogenization</b> <i>B. Engquist</i> <i>&amp; O. Runborg</i>	98
1	Introduction	98
2	Projection generated homogenization	103
3	Wavelet-based numerical homogenization	105
4	Numerical examples	115
<b>6</b>	<b>Plane wave methods for approximating the time harmonic wave equation</b> <i>T. Luostari, T. Huttunen</i> <i>&amp; P. Monk</i>	127
1	Introduction	127
2	Derivation of the UWVF	131
3	Discretization of the UWVF	135
4	Analysis of the UWVF	138
5	Numerical implementation and results for the UWVF	141
6	Conclusion	149
<b>7</b>	<b>Boundary integral methods in high frequency scattering</b> <i>S.N. Chandler-Wilde &amp; I.G. Graham</i>	154
1	Introduction	154
2	Hybrid approximation spaces	160
3	Stability and conditioning	176
4	Implementation	187
<b>8</b>	<b>Novel analytical and numerical methods for elliptic boundary value problems</b> <i>A.S. Fokas &amp; E.A. Spence</i>	194
1	Introduction	194
2	The derivations of integral representations	200
3	The elimination of the unknown boundary values using algebraic manipulations	205
4	Formulation of Riemann–Hilbert problems	223
5	A new numerical method	226
