<i>Preface</i>	<i>page xi</i>
<i>Acknowledgments</i>	xv
<i>Contributors</i>	xvii
1 Introduction: A computational approach to multiphase flow	
<i>A. Prosperetti and G. Tryggvason</i>	1
1.1 Some typical multiphase flows	3
1.2 A guided tour	7
1.3 Governing equations and boundary conditions	9
1.4 Some dimensionless groups	14
2 Direct numerical simulations of finite Reynolds number flows	
<i>G. Tryggvason and S. Balachandar</i>	19
2.1 Overview	20
2.2 Integrating the Navier–Stokes equations in time	23
2.3 Spatial discretization	26
2.4 Boundary conditions	33
3 Immersed boundary methods for fluid interfaces	
<i>G. Tryggvason, M. Sussman and M.Y. Hussaini</i>	37
3.1 The “one-fluid” approach	38
3.2 Advecting a marker function	43
3.3 The volume-of-fluid (VOF) method	48
3.4 Front tracking using marker points	50
3.5 The level-set method	57
3.6 Other methods to advect the marker function	63
3.7 Computational examples	65
3.7.1 Validation problems	65

vi	<i>Contents</i>	
3.7.2	Applications to physical problems	69
3.8	Conclusion	77
4	Structured grid methods for solid particles	
	<i>S. Balachandar</i>	78
4.1	Sharp-interface Cartesian grid method	80
4.1.1	Fluid–solid interface treatment	80
4.1.2	Other issues	82
4.2	Immersed boundary technique	84
4.2.1	Feedback forcing	85
4.2.2	Direct forcing	86
4.2.3	Discrete-time mass and momentum forcing	88
4.2.4	Using the exact near-body velocity	92
4.3	Body-fitted grids	93
4.3.1	Finite-volume technique	93
4.3.2	Spectral methods	95
5	Finite element methods for particulate flows	
	<i>H. Hu</i>	113
5.1	Governing equations	114
5.2	Fully explicit scheme and its stability	116
5.3	Combined fluid–solid formulation	117
5.4	Arbitrary Lagrangian–Eulerian (ALE) mesh movement	119
5.5	Temporal discretization – finite difference scheme	122
5.6	Spatial discretization – Galerkin finite element scheme	124
5.7	Mesh generation	127
5.8	Projection scheme	130
5.9	Explicit–implicit solution procedure	133
5.10	Space-time finite element method	135
5.11	Distributed Lagrange multiplier/fictitious domain (DLM/FD) particle mover	139
5.12	Particle collision	144
5.13	Sample applications	148
5.13.1	Sedimentation of a single sphere in a tube	149
5.13.2	Interaction of a pair of particles in a Newtonian fluid: Draft- ing–kissing–tumbling	151
5.13.3	Interaction of particles in a viscoelastic fluid: Chaining	152
5.13.4	Lubrication in pressure-driven particulate flows	152
6	Lattice Boltzmann models for multiphase flows	
	<i>S. Chen, X. He and L.-S. Luo</i>	157
6.1	Brief history of the lattice Boltzmann method	157

Contents

vii

6.2	Lattice Boltzmann equations	158
6.3	Lattice Boltzmann models for multiphase flow	160
6.3.1	Theory	161
6.3.2	Applications of the lattice Boltzmann multiphase models	172
6.4	Fluid–wall interactions in the lattice Boltzmann simulations	180
6.4.1	The generalized lattice Boltzmann method with multiple relaxation times	182
6.4.2	The bounce-back boundary condition	183
6.4.3	Treatment of moving boundaries	187
6.5	Some test cases	188
6.5.1	Flow in porous media	188
6.5.2	An impulsively started cylinder moving in a 2D channel	190
6.6	Conclusion and discussion	192
7	Boundary integral methods for Stokes flows	
	<i>J. Blawdziewicz</i>	193
7.1	Introduction	193
7.2	Preliminaries	195
7.2.1	Stokes flow limit	195
7.2.2	Stokes-flow problems in multiphase systems	196
7.2.3	Lorentz integral identities	200
7.2.4	Green’s functions	201
7.3	The boundary integral equations	204
7.3.1	Singularity subtraction	204
7.3.2	First-kind boundary integral formulation	205
7.3.3	Second-kind boundary integral formulation	206
7.3.4	A better form of the boundary integral equation	208
7.3.5	Rigid-particle limit	212
7.4	Multiparticle systems	214
7.4.1	System of viscous drops	215
7.4.2	Wielandt’s deflation	217
7.4.3	System of rigid particles	217
7.4.4	Periodic boundary conditions	218
7.5	Numerical integration methods	221
7.5.1	Surface discretization	221
7.5.2	Surface approximation methods	224
7.5.3	Evaluation of the single-layer and double-layer integrals	225
7.5.4	Iterative solution methods	229
7.5.5	Surface evolution	230
7.5.6	Acceleration methods	232

viii	<i>Contents</i>	
8	Averaged equations for multiphase flow	
	<i>A. Prosperetti</i>	237
8.1	Introduction	237
8.2	Volume averaging	239
8.2.1	Conservation of mass	242
8.2.2	Conservation of momentum	244
8.2.3	Conservation of energy	247
8.2.4	Simplified models	249
8.3	Disperse flow	251
8.4	Well-posedness of Eulerian–Eulerian models	262
8.4.1	A simple example	262
8.4.2	Quasilinear systems	267
8.5	Boundary conditions	275
9	Point-particle methods for disperse flows	
	<i>K. Squires</i>	282
9.1	Point-force approximation	283
9.2	Particle equation of motion	285
9.3	Numerical treatment of the particulate phase	288
9.3.1	Interpolation	288
9.3.2	Integration	294
9.4	Numerical treatment of the fluid phase	296
9.4.1	A second-order fractional-step method for incompressible flows	297
9.4.2	Boundary conditions	299
9.4.3	A Fourier series method for isotropic turbulence	300
9.5	Gas–solid flows	305
9.5.1	The undisturbed fluid velocity in point-particle treatments	305
9.5.2	Implementation of the coupling force	307
9.6	Examples	309
9.6.1	Particle-laden homogeneous and isotropic turbulence	309
9.6.2	Particle-laden slab flow	314
10	Segregated methods for two-fluid models	
	<i>A. Prosperetti, S. Sundaresan, S. Pannala and D.Z. Zhang</i>	320
10.1	A general one-dimensional model	321
10.2	Discretization	323
10.2.1	Convection–diffusion equation	324
10.2.2	Calculation of cell-surface quantities	327
10.2.3	Equations of the two-fluid model	331
10.3	Calculation of the pressure	336

Contents

ix

10.3.1 A simple incompressible model	337
10.3.2 Mass-conservation algorithms	340
10.3.3 The IPSA volume-conservation algorithm	343
10.3.4 Co-located variable arrangement	348
10.4 Example: fluidized beds	351
10.5 An Eulerian–Lagrangian scheme	365
10.5.1 Single-phase flow	366
10.5.2 Multiphase flow	369
10.5.3 Pressure calculation	371
10.5.4 Calculation of cell-surface quantities	373
10.6 A partially coupled algorithm	375
10.6.1 Mathematical model	376
10.6.2 Discretization	377
10.6.3 Boundary conditions	380
10.6.4 Method of solution	381
11 Coupled methods for multifluid models	
<i>A. Prosperetti</i>	386
11.1 Mathematical models	387
11.2 First-order methods	391
11.2.1 A semi-implicit method	391
11.2.2 The SETS method	395
11.2.3 Implicit methods	397
11.2.4 Numerical diffusion and other difficulties	398
11.3 Introduction to high-resolution schemes	400
11.3.1 Scalar conservation laws	401
11.3.2 Systems of equations	408
11.3.3 High-resolution schemes	417
11.4 Application to multiphase flow models	420
11.5 Flux vector splitting	429
11.6 Conclusions	434
