- absorption
 - definition of, 223
 - relaxation processes in, 232
- absorption coefficient, *see* scattering of rays
- abyssal circulation, 23
- acoustic path length
 - in definition of Fresnel zone, 101
 - in definition of phase curvature, 102
 - of a deterministic double loop, 68
 - in distinguishing regions in Λ - Φ space, 127
 - relation to eikonal, 83
 - relation to travel time, 83
- acoustic wavefunction, *see* wavefunction
- amplitude, complex, *see* wavefunction, reduced
- angle–depth diagrams, 69–73
 - source lines in, 73
- angular spectrum, *see* scattering of rays
- Antarctic Circumpolar Current, 11
- apex, definition of, 66
- apex approximation, 113
- Argand diagram, *see* phasor
- aspect ratio
 - definition of, 4
 - effect on signal statistics, 214
- attenuation, *see* absorption
- autocorrelation, *see* second-order correlation
- baroclinic flow, 22
- barotropic flow, 22
- barotropic waves, *see* planetary waves
- Boric acid sound absorption, 232
- Born approximation, 194
- bottom-trapped waves, 11
- boundaries in Λ - Φ space, 133, 194
- Boussinesq approximation, 47
- Brunt–Väisälä frequency, *see* buoyancy frequency
- buoyancy field, 14
- buoyancy frequency
 - definition of, 3
 - exponential, 4, 31, 65
- canonical profile
 - angle–depth diagram, 69
 - exponential buoyancy frequency, 4, 31, 65
 - expression for, 32
 - typical midlatitude section, 14
 - see also* buoyancy frequency, exponential
- Cartesian spectra, 153, 243–8
- caustic, 66, 73
 - for a beam-former receiver 106, 188
- channeled ocean, 174
- characteristic scales of acoustic signal fluctuations, 123
- coherence, in frequency, 205
- coherence function, *see* correlation function
- coherence length, 139–40
- coherence time, 138
- coherent bandwidth, 142
- coherent communications channel, 143
- continuity equation, 47
- coordinate system, 67
- correlation function
 - of sound-speed fluctuations, 88
 - of wavefunction, 152, 203
 - see also* second-order correlation

- correlation lengths
 - L_V, L_H , 89, 110
 - L_P , 107, 110
- Cromwell current, 28
- cross-correlation, *see* second-order correlation
- diffraction parameter, Λ
 - definition in homogeneous, isotropic case, 90
 - evaluation from internal-wave dominance, 114–16
 - general definition of, 108
 - in phase-screen treatment, 193
 - in unsaturated region, 169
- dispersion relation of internal waves, 50
 - use in changing spectral function variables, § 7–9
- Doppler shift, 123
- double-diffusive processes, 17
- eddies, *see* mesoscale
- eddy diffusivity, vertical, 7, 23
- eikonal, 83
- energy flux, 220
- Equatorial Undercurrent, 28
- Euler equation, 47
- exponential ocean, *see* canonical profile
- extinction length, 95
- fadeouts, 154, 161
- fast Fourier transform, 78
- finestructure, 14–19
- fourth moment, 209–12
 - see also* intensity correlations
- Fredholm determinant, *see* functional determinant
- Fresnel condition, 169, 174, 176
- Fresnel zone, 90, 101
- friction velocity, 30
- front, 1, 28
 - subarctic, 29
- frontogenesis, 29
- frozen ocean assumption, 144
- fully saturated, 129, 200
- functional determinant, 217
- Gaussian random variable, 150
- Gaussian statistics
 - behavior of the wavefunction in the unsaturated region, 200
 - first corrections to, 210, 261
- geometrical optics
 - approximation to the pressure, 94, 167
 - behavior of phase and amplitude statistics, 136, 169
 - in a homogeneous, isotropic medium, 94–9
 - rays in the presence of arbitrary sound-speed behavior, 82
 - rays in the sound channel, 65
 - as a region of Λ - Φ space, 130
- geostrophic flow, 42
- geostrophic relation, 22
- geostrophic turbulence, 42–3
- Helmholtz equation, 77
- impulse response, 144
- inertial frequency, definition of, 3
- instantaneous transfer function, 144
- intensity coherence time, 138
- intensity correlations, 136, 203, 210
- intensity fluctuations
 - in Azores experiment, 261, 266
 - in Cobb Seamount experiment, 253–5
 - in Eleuthera–Bermuda experiment, 244
 - homogeneous, isotropic case, 98
 - numerical experiments, 187
 - in partial saturation, 217
 - spectra, 183
 - statistics, 154
 - in unsaturated region, 169, 182
- intensity in transport theory, 220
- internal waves
 - basic equations, 46
 - boundary conditions, 49
 - dispersion relation, 50, 58
 - displacement of isodensity surface, 55
 - energy density, 52, 55
 - linearization, 48

- internal waves—*cont.*
 phase speed, 50
 role in this book, 1
 sound-speed perturbations, 32, 59–61, 257
 spectrum of displacement, 54–7
 spectrum of sound-speed deviation, 59–61
 universal spectrum, 1
 wavefunctions, 50, 53
- lateral fluxes, 9
 Liouville's theorem, 73
 log-amplitude fluctuations, 132, 136, 168, 253
see also intensity fluctuations
 log-normal distribution, 131, 261
- mesoscale
 in the ocean environment, 1
 orders of magnitude, 40–2
 relation to scales, 4
 micromultipath, *see* micropath
 micropath, 129
 bandwidth, 142
 in path-integral treatment, 208
 in phase-screen treatment, 189
 microstructure
 definition of, 14–19
 in the ocean environment, 1
 scattering from, 234–6
 mixed layer, 1, 30
 moment equations
 relation to path-integral technique, 220, 226
 relation to transport equation, 220, 223, 226
 moments of the wavefunction, 151
see also correlation function, and wavefunction
 multipath
 deterministic, 66, 73
 distinctness of multiple rays, 129, 194
 normal distribution, *see* Gaussian statistics
- ocean structure
 difference from homogeneous, isotropic turbulence, 100
 intrusive features, 17
 latitudinal variation, 10
 low frequency, *see* planetary waves
see also finestructure, internal waves, and microstructure
 one-point function, 122, 130–5, 158
- parabolic approximation, 77
 parabolic wave equation, 78, 212
 partial saturation
 definition of, 129
 distinguishing from full saturation, 135–138, 263
 in phase-screen treatment, 196
 time separations, 160
 path integral
 introduction, 78–81
 use in calculating signal statistics, 208–9
 phase curvature
 approximations to, 103
 definition of, 102–3
 in diffraction parameter, Λ , 108
 in the phase-screen treatment, 190
 in the unsaturated region, 176
 phase fluctuations
 in Cobb Seamount experiment, 253
 in Eleuthera–Bermuda experiment, 244
 in the unsaturated region, 167, 182
 numerical experiments, 185
 spectra, 183
 phase screen, 189
 expression for the reduced wavefunction, 191
 and path integral, 207
 phase statistics, 154
 phase-structure function
 evaluation from internal-wave dominance, 117–19
 general definition of, 108
 homogeneous, isotropic case, 95–8
 phasor, 133, 265
 planetary waves
 baroclinic, 37
 barotropic, 36
