

THE ARCHAEOLOGY OF EARLY CHINA

This volume aims to satisfy a pressing need for an updated account of Chinese archaeology. It covers an extended time period from the earliest peopling of China to the unification of the Chinese Empire some two thousand years ago. The geographical coverage includes the traditional focus on the Yellow River basin but also covers China's many other regions. Among the topics covered are the emergence of agricultural communities; the establishment of a sedentary way of life; the development of sociopolitical complexity; advances in lithic technology, ceramics, and metallurgy; and the appearance of writing, large-scale public works, cities, and states. Particular emphasis is placed on the great cultural variations that existed among the different regions and the development of interregional contacts among those societies.

Gideon Shelach-Lavi is the Louis Freiberg Professor of East Asian Studies at the Hebrew University of Jerusalem. He has conducted archaeological fieldwork in northeast China since 1995. He is currently heading the Fuxin Regional Archaeological Project. He has published many articles in leading academic journals. His most recent books include *Prehistoric Societies on the Northern Frontiers of China: Archaeological Perspectives on Identity Formation and Economic Change during the First Millennium BCE* (2009), *Chifeng International Collaborative Archaeological Project* (coauthor, 2011), and *The Birth of Empire: The State of Qin Revisited* (coeditor, 2013).

THE ARCHAEOLOGY OF EARLY CHINA:
FROM PREHISTORY TO THE HAN DYNASTY

233	The so-called jade dragon	337
234	Uses of the “jade dragon” symbol in different contexts	338

ACKNOWLEDGMENTS

The archaeology of any region is a cumulative process that builds upon the work of many individuals. This is all the more true for China, whose vast size and long history are uncovered by generations of committed Chinese archaeologists who often work in remote areas and at extreme conditions. All of us who are interested in the history and archaeology of China are indebted to these people, some acknowledged in this book and many others that I was unable to individually mention.

This book could not have been written without the help of many people and the generous support received from several institutions. I am grateful to all of them. My colleagues and friends: Francis Allard who was involved in defining the concept for the book and Yuri Pines who commented extensively (sometimes critically) on its historical parts. Kathy Linduff who connected me with Cambridge University Press and encouraged me to embark on the long journey of writing this book. The many colleagues I cannot name here who shared with me the results of their own work. I benefited immensely from the help of many Hebrew University students who gathered materials and worked on the illustrations for the book: Yitzchak Jaffe, Nir Horovitz, Amit Niv, and Tao Lumin. My student Chen Bo and my

colleague and friend Teng Mingyu helped me locate materials unavailable in Israel and sent me new books from China. I am also grateful to all those who contributed pictures to this book, especially Gary Lee Todd for allowing me to use his extensive collection of photos and Xu Hong for his help and patience.

Most of this book was written while I was a resident at the Scholion Interdisciplinary Research Center at the Hebrew University. I am grateful to the center and to the Mandel Foundation that supports it for hosting me, and to members of my research group, especially Ronnie Ellenblum and Sharon Zuckerman, for many hours of informal discussions on a variety of topics that sometimes found their way into the pages of this book. I also spent extended periods of time at the Center for Frontier Archaeology at Jilin University, where I enjoyed a generous welcome, used their extensive collection of books and papers on Chinese archaeology, and benefited greatly from discussions with colleagues and students.

I am especially grateful for the assistance I have received over the years from the Louis Freiberg Chair of East Asian Studies. Support for the editing of this book was also received from the Faculty of Humanities at Hebrew University. Two

gifted editors worked on different parts of the manuscript: Nicholas (Nik) John and Elana Chipman, and Dolev Rahat worked on the index. The book would not be what it is without their work.

Finally, I am also grateful to Beatrice Rehl, Anastasia Graf, Isabella Vitti, Minaketan Dash, and the staff of Cambridge University Press for their support and patience.
