

Contents

<i>Preface</i>	<i>page vii</i>
1 Curiosity and research	1
1.1 Course goals	1
1.2 Kinds of questions	1
1.3 Research methods for science	3
1.4 Putting methods together	15
Assignments	15
2 Overview of experimental analysis and design	18
2.1 Hypothesis-driven experiments	18
2.2 Measuring values	30
2.3 Improving experiments	39
2.4 Safety and ethics	43
Assignments	48
3 Statistics	51
3.1 Motivations for statistics	51
3.2 Reducing many numbers to few	55
3.3 Probability distributions	61
3.4 Connecting data and probability distributions	70
3.5 What happens to averages as N increases	75
3.6 Central Limit Theorem	81
3.7 Comparing many experimental measurements	92
3.8 Data with many values of independent variable	97
3.9 Other statistical tests	105
Assignments	105
4 Mathematical models	112
4.1 Ingredients of mathematical modeling	112
4.2 Estimation	121
4.3 Linear regression	125

vi	<i>Contents</i>	
	4.4 Matching arbitrary functions to data	128
	4.5 Fourier transforms	133
	4.6 Deterministic modeling	136
	Assignments	146
5	Scientific information	151
	5.1 Introduction	151
	5.2 Writing a proposal	151
	5.3 Writing scientific papers	152
	5.4 Scientific figures	161
	5.5 Giving scientific presentations	166
	5.6 Searching for scientific information	168
	5.7 Obtaining scientific articles	172
	5.8 Reading scientific papers	173
	5.9 Final words	177
	Assignments	178
	<i>Appendix A</i> Spreadsheets for basic scientific computation	182
	A.1 Spreadsheet programs	182
	A.2 Basic program features	183
	A.3 Built-in functions	189
	A.4 Charts	194
	Assignments	199
	<i>Appendix B</i> Extract from Galileo's <i>Two New Sciences</i>	201
	<i>Appendix C</i> Safety in the laboratory	204
	C.1 Safety contract	204
	C.2 Chemical safety forms	207
	<i>Appendix D</i> Grading rubrics	210
	D.1 Written presentation	211
	D.2 Oral presentation	222
	<i>Index</i>	224
