The Cambridge Survey of World Migration begins in the sixteenth century with the establishment of European colonies overseas and covers the history of migration to the late twentieth century, when political conflict, global communications and transport systems stimulated immense and complex flows of displaced persons, labour migrants and skilled professionals. In ninety-five contributions, leading scholars from twenty-seven different countries consider a wide variety of issues including regional migration patterns, the flights of refugees and illegal migration. Each entry constitutes a substantive essay, supported by up-to-date bibliographies, tables, plates, maps and figures. As the most wide-ranging coverage of migration in a single volume, the book will be an indispensable reference tool for scholars and students in the field.
