SUBJECT INDEX

- accuracy of data, 27, 49, 147
 of equilibrium composition, 128, 148
 activity coefficients, 25
 additional reactions or species, 73, 78, 79
 adiabatic reactions, 33, 79, 119
 algebraic basis, 37, 41
 algorithm, 66, 72, 77, 89
 analogue computer, 152
 analytical criterion, 3, 113
 applications of equilibrium computation, 4
 approximations, 112, 114
 assignment of thermodynamic variables, 102
- ‘best’ method, 150, 154
 biological systems, 6, 53
 Brinkley’s method, 88 ff
 brute force methods, 55, 121
- calculators, 1, 120
 change, in available data, 30
 in composition with change in elemental abundance, 51, 79
 in parameters, 48
 changed system, 80
 chemical equilibrium condition, 9
 chemical evolution, 7
 chemical potential, 11, 43, 44
 chemical processes, 4, 6, 47
 combustion, 123
 comparison of methods, 149 ff
 complex equilibria, 6, 132
 component reduction, 106
 components, 3, 17, 88
 components, optimized basis, 113
 computational cycle, 66, 72, 77, 90
 computational equivalence, 52, 102, 134, 137
 computer, language, 153
 science, 4
 size, 152
 computers, analogue, 152
 digital, 3, 54
 condensed phases or species, 18, 43, 45, 51, 57, 73, 78, 80, 95, 108, 114, 120, 132, 141 ff
 maximum number, 19, 44, 95
 constrained minimization, 56
- constraints, 15, 17, 55, 56, 115
 control, 6
 convergence, 2, 52, 66, 94, 104, 105, 115, 134
 forcing, 108, 114, 118, 136
 guarantee, 108, 112, 140
 parameter, 136
 cost of computation 150
 covolume, 21
 criteria, for comparison, 154
 for halting computation, 149
 Crout reduction method, 94, 101
 Cruise-Villars method, 114
- Dalton’s law, 7
 data, thermodynamic, 26
 degrees of freedom, 16, 42
 derived species, 3, 88, 114
 detonation wave, 5
 differentiability, 145
 differential equations solution, 139
 direct search, 56
 direction of search, 65
 discrepancies, 92, 111
 drift, 66 ff, 72, 73, 77, 84, 108, 113
- eigenvectors 136
 element potentials, 124 ff
 elemental abundance, 39
 elemental abundance ratio, 19
 enthalpy, of formation, 27, 30, 31
 of mixing, 9
 specification, 99
 entropy of mixing, 8
 equation of state, 5, 21
 Cook, 23
 ideal, 21
 van der Waals, 23
 virial, 22
 equilibrium conditions, 9
 equilibrium constant, 13, 43
 equilibrium displacement, 53
 equivalence, computational, 52, 102, 134, 137
 mathematical, 36
 equivalent reactant formula, 99
 errors, 27, 138
 errors in data, 146 ff
 estimates obeying mass balance equations, 64, 77, 131

SUBJECT INDEX

175

- estimates obeying mass action equations, 84
 estimation of data, 28
 estimation of equilibrium composition, 105, 128
 example: propane + air, 155 ff
 excess functions, 25, 26, 74, 145
 existence of solutions, 31
 exploratory moves, 56
 explosives properties, 4, 5, 23, 47, 103
 extensive quantity, 38
 extent of reaction, 13, 76
- first order search, 64
 formation reaction, 38
 formula vector, 16, 88, 113
 free energy, Gibbs, 9
 Helmholtz, 11
 free energy surface, 64
 freedom, degrees of, 16
 fugacity, 24
 coefficients, 25
 partial, 25
- gas mixtures, 8
 gas phase equilibrium computation, 45, 82, 133
 gaseous atoms, as components, 98
 general optimization, 54, 55
 Gibbs free energy, 9
 change, 11, 99
 of formation, 31
 function, 29
 function deviation, 30
 minimization, 37
 of mixing, 9
 gradient method, 76
 gradient projection method, 85
 graphical interpolation, 2, 123 ff
 guarantee of convergence, 108, 112, 140
- Helmholtz free energy, 11
 heterogeneous systems, 14
 high pressure processes, 4, 6
 high temperature processes, 4, 6
 history, 1
 homogeneous systems, 7, 14
- ideal gases, 7, 21, 37
 'importance' of reactions, 43, 130
 independent reactions, 17
 indirect approach, 139
 inequalities, 95, 107
 inert systems, 15, 125
 intensive property, 38
- interactions, molecular, 22, 23
 interpolation, 29, 123
 isenthalpic process, 33, 103
 isentropic process, 34, 103
- Jacobian, 32, 94
 JANAF tables, 27
- kinetic model, 112
- Lagrangian function, 15, 40, 122, 158
 Lagrangian multipliers, 15, 40, 67, 70, 82, 122, 158
 levels of computation, 117
 Lewis' rule, 25
 limitation temperature, 129
 linear approximation, 62
 linear programming, 44, 55, 61, 131, 132
 linearization, 3, 61, 63, 93
 liquid solutions, 25
 logarithms, 92, 94
- major derived species, 114
 mass action equation, 13, 39, 42, 88
 mass balance equation, 39, 57
 mass flow, 20
 mathematical structure, 36, 141
 matrix inversion, 83, 90, 102, 112
 maximum number of condensed species, 19, 45, 95
 minimization, of free energy, 38, 58, 59
 second, 49, 147
 minor derived species, 114
 mixtures, gas, 8
 real, 25
 mole fractions, 8, 91
 mole numbers, 91
 molecular compounds, 100
- Naphtali's method, 54, 76
 NASA-method, 98
 negative mole numbers, 90, 92, 94
 nested iterations, 115 ff
 Newton-Raphson technique, 92, 100, 137
 Newton's method (see Newton-Raphson technique)
 non-ideal systems, 21, 74, 75, 96, 104, 145, 146
 non-linear equations, 87
 non-negative condition, 38, 57, 65, 78
 NOTS-method, 110
 numerical analysis, 1

- optimized basis of components, 113, 129
 optimization, 6, 54, 85
 of yield, 6, 52, 79
 organic systems, 6
 original systems, 80
- parameters, selection, 33
 perturbation, 110
 partial molar free energy, 11, 44
 partial pressure, 8
 pattern moves, 56
 pattern search, 55
 penalty functions, 56, 57
 phases, 14, 15
 phase equilibrium, 16, 42
 phase rule, 15, 16, 17, 42
 utilization, 18
 phase transition, 104
 polynomial fitting, 29
 pressure, as variable, 73
 problem conditions, 154, 155
 processes, adiabatic, 33, 79, 119
 isobaric, 33, 119
 isochoric, 33, 119
 programmer's skill, 153
 programming, 150, 153
 projection method, 122
 propellants, 4, 5, 47, 103
 properties of methods, 153 ff
 pseudo-equilibrium, 17
 pure iteration, 90, 134
- quadratic approximation, 70
- RAND method, 69
 rank of matrix, 16, 73, 88, 114
 rate of search, 66
 reactants, 99
 reaction equation, 17, 88
 reaction equilibria, 12
 reactions, 17, 88
 reactive system, 42, 125
 recommendations, 156
 reduction to one or two equations, 123
 reference elements, 31, 91
 residuals, 116, 137
 restricted equilibria, 17
 rockets, 1, 5, 103
 roundoff, 90
- scale parameters, 60
 search parameters, 47, 64, 77
 secant method, 90
 second minimization, 49, 147
 second order search, 64, 69
- sequential unconstrained minimiza-
 tion technique, 59
 side conditions, 39
 Simplex method, 61
 single-variable iteration, 118
 singularity of matrix, 52
 sliding target method, 109
 solid species (see condensed species)
 species, 7
 selection, 128, 129
 specific heats, 29, 30
 specific impulse, 5
 speed of computation, 140, 150 ff
 spontaneous process, 9
 standard chemical potential, 31
 starting estimates, 128
 effect on speed, 120, 151
 steepest descent, 55, 63, 64
 step size, 66, 67, 77, 106 ff
 stoichiometric coefficients, 43, 76, 88,
 89
 stoichiometry, 16
 succession of problems, 60
 successive reaction adjustments, 110
 suitability of methods, 155
 summation convention, 88
 SUMT, 59
 survey method, 79
- tabular reduction, 124
 Taylor series expansion, 135
 temperature, as variable, 73
 tensor notation, 16, 88
 test problem, 155 ff
 thermodynamic variables, 32, 98, 102
 trace quantities, 63, 72, 78
 trial-and-error procedures, 1, 105, 130
 turn-around time, 150
- unconstrained optimization, 59, 85
 uniqueness of solution, 31, 32
- van der Waals equation, 23
 variable metric method, 86
 variables, 2, 16, 117
 variance, 16, 17, 42
 variation in pressure and temperature,
 47, 73, 98, 103
 Villars' method, 110
 virial coefficients, 22
- weighting factors, 58, 78, 105
 yield maximization, 52, 79
