978-0-521-18243-0 - Strategic Management of Innovation and Design

Pascal Le Masson, Benoit Weil and Armand Hatchuel

Index

[More information](#)

Index

Note: Page numbers in *italic* indicate Glossary entries

3M xxviii

Abernathy, W. J. 380–1

actor network theory 359

actors involved in the innovation process 11

adaptive processes in organizations 367–8

adhocracy (organic organizational structures)
xxix, 17–18, 84, 377, 379, 389

Adner, R. 399

adoption and diffusion of innovations 13, 357–8

Airbus

R&D 143–5

range of aircraft 106

Alexander, C. 366, 367

aligned interests (*intérêt*) model 359

Alter, Norbert 13, 361, 362

ambidextrous organizations xxix, 17, 18, 44, 382,
388, 389

Angle, H. 383–4

Apple xxviii

iPhone and App Store 28

iPod 27, 28

architectural design tradition 53–4

Argyris, C. 367–8, 375

Arrow, Kenneth J. 352

artificial intelligence 371, 375

artistic design tradition 54–5

Augier, M. 397

automobile industry

fragmented design 147

redefinition of value spaces 26–7

automobile odours case study 291, 302–10

automotive glass *see* Saint-Gobain Sekurit

Avanti (innovative start-up) 122–34

challenges for small firms 123–4

competitive advantage from innovation 123

entrepreneurial capability of small firms 124–5

innovative design 122–5

learning rents from design 129

learning rents from the market 128–9

management by lineages 129–32

model of growth by innovative design 133–4

nail holder 261–4

opportunities for small firms 124

organizing an effective design function 126–9

ring-based organization 133

selected principles from the Tefal model 125–34

setting up lineages 129–32

setting up the organization 132–3

smart tools concept 127, 128–32

testing the Tefal model 122

aviation industry, learning curves 117

Babbage, Charles 9–10, 123, 347

Baldwin, C. Y. 396–7

Baldwin Locomotive Works 140–3, 184–5

Barney, J. 386

BASF 174

Baumol, W. J. 348–9

Bayer 174

behaviourism 362

Besant, J. 393–4

black box model 35–9, 46, 49

Blackberry 28

Blackler, F. 370, 375

blue-sky projects 3, 246–50

Boiteux, Marcel 351

Bolton, Elmer K. 187, 188–9

Booth, Henry 347

Booz Allen Hamilton 19, 38, 390–1

Borsig 143

Boulton and Watt 289

bounded rationality concept 60, 352, 366–7

brainstorming 365

Brown, J. S. 374

Brown, S. L. 382–3

Buderi, R. 396

budget management 392

bureaucratic (mechanistic) structures xxix, 84,
377, 379, 389

- Burns, T. 377, 378, 379
 Bush, Vannevar 349, 358
 business units 112–13
- C-K design theory xxx–xxxi, 203, 231–4, 409–10
 illustration (Mg-CO₂ engine for Mars missions)
 234–8, 288, 289
 motivation to develop 335
- CAD tools, use in R&D-based firms 148,
 149–50, 156
- Calor 71
 Canon 370
 Carothers, Wallace 186–7, 188
 central R&D 395
 Chapel, Vincent 4–5 *see also* Avanti; Tefal
 Charch, Hale 187–8
 Chevenard 174
 Christenson, C. M. 395
 Citroën 185
 Civilise, Jacques 317
 Clark, K. B. 391–2, 396
 clients, influencing innovation in suppliers 6–8
 closed and open forms of innovation xxix
 cluster of innovations concept 350
 cognitive processes and innovation 14–16
 cognitive processes and innovation
 (literature review) 363–75
 adaptive processes in organizations 367–8
 brainstorming 365
 change in context 374
 collective decision making 367
 competency traps 368
 concept blending 365
 creative reasoning 374–5
 creative thinking 364–5
 creativity management 364–5
 decision making and bounded rationality 366–7
 description of creative reasoning 374–5
 distinction between information and
 knowledge 369
 divergent thinking 364–5
 double-loop learning 368
 enacting organization concept 373–4
 evolution of core competencies 372–3
 experiential learning 372–4
 expert systems 370–2, 375
 flash of insight 366, 373, 375
 genealogy of research questions and key notions
 363–74
 interstitial communities within
 organizations 374
 intuition 373, 375
 knowledge in action 370–2, 374
 knowledge transfer 369–72
 learning by experimentation 372–3
 merging of work on reasoning and knowledge
 375
 model of the inventor's mind 365–6
 organizational change 367–8
 organizational learning 367–8
 organizations as interpretive systems 373–4
 problem-solving approach to innovation 365–7
 production of knowledge for innovation
 372–4, 374
 recent trends 374–5
 single-loop learning 368
 tacit and explicit knowledge 369–70, 373
 typology of knowledge in action 374
- Cohen, W. M. 369, 375
 cohesion coordination 340–2
 Colbert, Jean-Baptiste 347
 Cold War 349
 collaborative partnerships *see* exploratory
 partnerships
 collective decision making 367
 collective design process 51–2
 common family concept 106
 communities of practice 13, 360–1
 competence-based theories of the innovative firm
 385–7
 competency traps 368
 complementary assets 397
 complexity theory 17, 384–5
 concept (C), in C-K design theory 409–10
 concept blending 365
 conceptual core 120
 conceptual design stage (systematic design model)
 55
 congruence trap 382
 Conner, K. 386, 387
 consumers, learning to use new technology 28
 context, importance for innovation 21
 contingency theory 377
 continuously changing organizations 17, 18,
 382–3, 388
 contract law 11
 Cooper, R. G. 391, 393
 core competencies 17, 18, 75, 105, 372–3,
 386–7, 389
 creative reasoning 15, 374–5
 creative thinking 364–5
 creativity management 80–2, 364–5
 creativity techniques 227–31, 398–9
 crisis in the identity of objects 25–9
 crisis in R&D *see* R&D-based firms
 cross-disciplinary nature of innovation 21
 customers' influence on innovation 358–9
 Cusumano, M. 397

- Daft, R. L. 373–4, 379
- Damanpour, F. 379
- Dassault Systèmes 63
- David, Paul 352–3
- de Tarde, Gabriel 357
- decision making
and bounded rationality 366–7
collective 367
flexibility 399
- dematuration phenomenon 381
- design 404–5
analytical framework for innovation capability 63–5
in classic organizational theory 59–60
industrial design approach 59
problem-solving approach 60–1
product development interpretation 58
restrictive interpretations 57–61
see also innovative design
- design activities 404–5
actors involved 51–2
and organizational structure 59–60
architectural tradition 53–4
artistic tradition 54–5
collective design process 51–2
contribution to innovation 51–65
critical properties 56–7
design traditions 53–7
engineering tradition 55–6
focus in innovation capability management 51–65
jazz improvisation metaphor 52
latent organizations 52–3
reasoning, knowledge and expansion 53–6
systematic design model 55, 61
- design assistance tools 63
- design-based approach 56–7
- design-driven innovation 59, 396
- design function, types of returns 115–16
- design lineages *see* lineages
- design reasoning 53–6
new challenges 63
problem-solving approach 60–1
- design recipes 168
- design rules 396–7
- design space 239–42, 411–12
- design strategy 410–11
- diffusion concept 13
- diffusion model 359
- diffusion of innovations 357–8
- divergent thinking 364–5
- domesticating innovation 143, 169–71
- dominant design 43–4, 104, 108, 109–11, 149, 353, 380, 381
- Dooley, K. J. 384–5
- double-loop learning 368
- Drucker, Peter 79, 393
- Du Pont 40, 108, 186–9
- dual-core model 379
- Duchamps, Marcel 54
- Duguid, P. 374
- dynamic capabilities concept 17, 18, 387–8, 389
- Dyson, bagless vacuum cleaner 151–4, 156
- eBay xxviii
- École des Mines, Saint-Étienne 364
- economic cycles 350
- economic policy and innovation 9–12
- economic policy and innovation
(literature review) 347–56
bounded rationality concept 352
consequences of scientific discoveries 347
dominant design phenomena 353
economic cycles 350
emergence of a typology of innovation 349–50
endogenous growth theory 350–2
evolutionary theory 352–4
first tools for economic policy on innovation 347
Frascati Manual 349
genealogy of research questions and key notions 347–54
Harrod–Domar model 350
impact of the rise of new industries 347
importance of economic context 354–5
indicators of economic and scientific activity 349–50
industry lifecycle models 353, 356
interactive nature of innovation 353–4
introduction of innovation into economics 348–9
introduction of statistical systems 349–50
knowledge-based economy 355
measuring the determinants of innovation 349–50
National Systems of Innovation 354
nature of innovation itself 356
need for new models for actors 355–6
path dependence 352–3
question of knowledge 355
recent trends 354–6
regulation of monopolies 348–9
relationship between growth and technology 350–2
S-shaped outputs curve 353
Schumpeter and growth 348
sociotechnical regime transition 353, 356
Solow model 350–1

- State intervention and industrial progress 347
 technical progress variable in micro-economic models 350–2
 technological trajectories (technical regimes) 352–3
- economic prosperity, and innovation xix
 Eisenhardt, K. M. 382–3, 387–8
 embodiment stage (systematic design model) 55
 empathic design 44
 enacting organization concept 373–4
 endogenous growth theory 350–2
 engineering departments
 founding of 376
 management techniques 390–1
 engineering design tradition 55–6
 Erickson, T. J. 395
 Ericsson 150
 evaluation of innovation 8–9
 evolutionary theory 352–4
 expansion, innovative design reasoning 227–31
 experiential learning 372–4
 experimentations and innovation 397–8
 expert systems 370–2, 375
 exploratory partnerships 63, 312–27
 analytical framework 315–18
 case studies 316–18
 coordination and cohesion 313–26
 design spaces 319–20
 effects of different forms of collaboration 319–26
 management challenges 313–15
 meeting places for design teams 326
 open innovation 313–14
 platforms 313–14
 potential new forms of partnerships 326–7
 Renault solar control windscreen project 317–18, 319, 321, 322
 types of collaborative partnerships 320–6
 value management 319–20
- Fayol, Henri 174, 332–4, 376, 393
 Fayolism 169
 Fenix 398
 financial capitalism, pincer effect with innovation capitalism xxvi
 firm as a design function, types of returns 115–16
 firms, growing use of innovation research 14
 first era of management 344–5
 first generation R&D 395
 flash of insight 16, 366, 373, 375
 flexible decision-making 399
 flexible product development 392
 Ford 380
 foundationist perspective on the management sciences xxxii
- fourth generation R&D 395–6
Frascati Manual 36, 163–4, 166, 349
 Fredberg, T. 398, 399
 Fredriksson, Billy 3–4, 63
 front-end innovation (FEI) 393
 functional design stage (systematic design model) 55
 functional divisions of management xxix
 fundamental innovations concept 350
 fuzzy front-end 392–3
- Gantt diagrams 392
 Garçon, Anne-Françoise 364
 Gawer, Annabelle 397
 General Electric Research Lab 174
 general equilibrium theory 10, 354
 genetically modified organisms (GMOs) 359
 Giebert, George 12, 356
 Gilfillan, Sean C. 348
 Goodman, Nelson 54
 Google xxix
 Google's Android 28
 government initiatives, project management 392
 government intervention, incentives for innovation xix, 335–7
 Grégoire, Marc 85–7
 growth, relationship with technology 350–2
 Guilford criteria for creativity evaluation 227–9
- Hage, J. T. 379–80
 Hamel, G. 386–7
 Harrod–Domar model 350
 Hatchuel, Armand 231–4, 355, 365, 367, 371–2, 393
 hedonic value of products 13
 Helfat, C. E. 387
 Henderson, R. M. 391, 396
 Hill, Julian W. 186–7, 188
 Hoechst 174
 Honda City 370
 hub of innovation 394
 hybrid objects 18
 hybrid solutions 26–7
- I* function (innovative design function) 177–83, 409
 C-K theory 231–8
 definition 177–81
 design spaces and value management 239–42
 extending the R&D model 177–83
 implementation 342–4
 in R&D-based firms 184–9
 innovation departments 225–6
 innovative design reasoning 227–31
 innovative design tools 246–53

- I* function (innovative design function) (*cont.*)
 model of collective action 242–6, 253
 models of activity and organization 225–54
 organizing collective innovation design 238–53
 principles of management 181–3
 Tefal 184 *see also* RID model
- identity of objects 403–4
 changeable nature of xxiv–xxv
 crisis in 25–9
 nature of ‘new’ products 25–9
 transforming 24–32, 31–44
- incremental innovation 349, 382, 394, 396
- incubators 395
- indicators of economic and scientific activity
 349–50
- industrial aesthetics 334
- industrial design
 approach 59
 founding of 334
- industrial designers 51
- industrial research, management techniques 390–1
- industrialisation, impact of 347
- industry architecture, influence of 396–7
- industry lifecycles 11, 353, 356
- information, distinction from knowledge 369
- innovation
 and economic prosperity xix
 as a management object xxvii, 20–2
 as a value judgement 45–6
 as a whirlwind process 359–60
 closed and open forms xxix
 common field of research 21–2
 cross-disciplinary nature 21
 emergence of intensive innovation xxiii–xxiv
 government initiatives to promote xix
 how it comes about xxiii
 identifying original practices xxix–xxx
 importance of context 21
 interactive nature of 353–4
 issues associated with xxvii
 lack of a model firm xxviii–xxx
 nature of 11–12, 356
 need for management techniques xxvii–xxviii
 previous research approaches xxix–xxx
 range of meanings xxi–xxii
 range of views on xxvii
 rates in organizations 380–3
 research approach xxii–xxiii, xxx–xxxii
 role of managers 5–6
 skunk work xxviii
 theoretical frameworks xxix–xxx
 versus invention 349
- innovation adopters, categories of 357–8
- innovation-based capitalism
 challenges facing xx–xxi
 transition from R&D to RID xx–xxi
 wide-reaching changes in xx–xxi
- innovation capability 387–8
 contradictory obligations 31–2
 controlling resources 32–44
 crisis in the identity of objects 25–9
 design as analytical framework 63–5
 hybrid solutions 26–7
 level of resources devoted to innovation 30–1
 nature of ‘new’ products 25–9
 one-off innovations 25
 rapid renewal of products 25
 transforming the identity of objects 24–32,
 31–44
- innovation capability management 24, 45–50
 elements of a new model 47–50
 emphasis on design activities 51–65
 shift from innovation management 45–7
 traps of innovation as a value judgement 45–6
- innovation capitalism, pincer effect with financial
 capitalism xxvi
- innovation departments 63
- innovation field exploration
 and rule-based design 300–2
 application of C-K theory 238–42
 model for collective action 242–6, 253
- innovation field mapping (WITAS project) 246–50
- innovation fields 226–54, 410–11
- innovation fields (Type 1, ΔC - δK) 256–271
 ΔC - δK reasoning 258–9
 Avanti nail holder 261–4
 challenges 258–9
 creation of new product lineages 256–8
 design spaces 259, 264–70
 example of a new design space 264–70
 examples of ΔC - δK reasoning 260–4
 exploration strategy (depth first) 258–59
 Michelin 257, 258, 270–1
 organization of exploration 258–9
 pharmaceutical industry 257–8, 258
 reasoning 258–9
 relations with *R* and *D* 270–1
 search for new values 258
 Telia 256–7, 258, 264–70
 traps 258–9
 value of design reasoning 258–9
 value of the innovation 270–1
- innovation fields (Type 2, δC - ΔK) 273–87
 case study (tempered automotive glass) 279–87
 challenges 277–8
 design spaces 277–8
 examples of δC - ΔK 273–6
 exploration strategy (width first) 276–8

- organization of exploration 276–8
- reasoning 276–8
- regenerating functions 273
- relations with *R* and *D* 278
- risks and traps 276–8
- taking advantage of new technologies 274–6
- value of the reasoning 277–8
- innovation fields (Type 3, ΔC - ΔK) 288–99
 - challenges 292, 294
 - design spaces 294–9
 - designing science-based products 288
 - difficulties encountered 290–1
 - examples of ΔC - ΔK 288–91
 - exploration strategy (dual expansion) 292–4
 - organizational approaches 292–3
 - reasoning 292–4
 - relations with *R* and *D* 293, 294
 - Schlumberger case study 293–9
 - structure of the business 293, 294
 - systematic design 293, 294
 - traps 292, 294
 - uncertainty with new technologies 292
 - value management 293–9
- innovation-intensive capitalism 29–30
 - changing identity of objects xxiv–xxv
 - contradictory obligations 31–2
- innovation journey 383–5, 389
 - The Innovation Journey* (Van de Ven *et al*) 18, 70
- innovation management 23–4
 - contradictory demands 44–7
 - shift to innovation capability management 45–7
 - third era of management 344–5
- innovation management system, design brief 342–4
- innovation martingales 103–9, 408–9
- innovation-oriented metabolism 405–6
- innovation typologies 10
- innovative design 59, 404–5
 - Avanti 122–5
 - design assistance tools 63
 - effects of uncertain identity of objects 62
 - emergence of new design specialities 61
 - expansion of knowledge and propositions 62
 - exploratory partnerships 63
 - increase in design resources 61–2
 - innovation departments 63
 - new challenges in design reasoning 63
 - new design organizations 63
 - new forms of organization 62
 - organizing collective design 61–2
 - transforming the identity of objects 61–3
- innovative design function *see I* function
- innovative design management 242–6
- innovative design process, basic operations 341
- innovative design reasoning
 - C-K theory 231–8
 - paradox 227–31
- innovative design tools 246–53
- innovative project management 393–4
- innovative reasoning and knowledge production 15–16
- innovative start-up *see* Avanti
- innovators in organizations 362
- insight *see* flash of insight
- Intel Architecture Lab (IAL) 321, 324–6, 397
- intellectual property 11, 38–9
- intensive innovation 403–4
 - emergence of xxiii–xiv
 - value creation through competition xxiii–xxiv
- interactive nature of innovation 353–4
- interstitial communities within organizations 374
- interstitial growth mechanism 385–6
- intuition and innovation 16, 373, 375
- invention/innovation typology 10
- invention versus innovation 349
- inventors
 - model of inventor's mind 365–6
 - role of 376–7
- Jacobides, M. G. 397
- jazz improvisation metaphor 52, 389
- Jewkes, J. 376–7
- Johnson, S. C. 390–1
- Jones, C. 390–1
