## Foreword

Success with the examination is about technique as much as knowledge. This book will be as good as others from the knowledge point of view but adds huge insight into technique. All examinations, whether it be your driving test or the FRCS (Tr & Orth), demand a disciplined technique. This book gives many pointers as to where a good technique helps to overcome the stress of the examination. Knowledge is a must but in itself is not enough. I would advocate this book to all orthopaedic year 1 trainees. That is when you need to start preparation – not year 4.

Use this book to guide preparation for the examination. If I can add my own advice, then it is to practise every day. Pester your consultants to viva you every day for 10 minutes. Understand the principles of everything you do in the course of your orthopaedic practice.

## Preface to second edition

One of the aims of the first edition was to cover the whole FRCS (Tr & Orth) syllabus in one book, which had never previously been attempted. As such there were always going to be areas that could have read better. In addition, the exam format keeps changing with the long case format now dropped in favour of the intermediate cases. There was a feeling of unfinished business and a need for a second edition.

Whilst 'Examination corner' has proved extremely popular with candidates it has been criticized in some quarters. Rather than providing a list of topics asked in the orals we wanted to give a more detailed account of the interaction between candidate and examiner but without going into minutiae. Examination corner does not magically allow candidates to pass the exam but rather guides them better; it is not a substitute for the hard work and slog needed to get through the exam successfully.

As the first edition had been extensively edited we were able to revisit and improve several examination corner scenarios with more dialogue. If this has not been possible we have gone with the original first edition versions except where the dialogue is now dated and incorrect. We have continued to include long case material despite this format being dropped as the material still offers good learning opportunities. The long case material is still relevant because the same cases appear in the exam, a comprehensive performance is still expected and the examiners ask the same sorts of questions.

It is our great pleasure to be able to involve a number of trainees who have used the first edition to navigate through the

exam successfully. It is vital that the book stays relevant and up to date, and involving newly exam-qualified trainees will hopefully ensure the continued success of the book.

The second edition features five additional chapters: surgical approaches, anatomy, Article 14, SAS doctors and orthopaedic oncology. Whilst each chapter is an exciting new addition to the book we are particularly pleased with the anatomy and surgical approaches chapters as they cover difficult dry areas of the syllabus that still need to be learnt by a candidate. All other chapters have been thoroughly revised to improve the content and cover the syllabus more thoroughly.

As with the first edition we continue to make no claim for the originality of the material contained in the text. We are attempting to synthesize material in the wider orthopaedic domain into a succinct and easily readable format to guide candidates through the exam. The original core material evolved from notes made whilst preparing for the FRCS (Tr & Orth) examination from a wide variety of differing sources. We are still trying to avoid reinventing the wheel!

A special word of thanks to Nicholas Dunton at Cambridge University Press who luckily had the foresight to agree fairly quickly to a second edition. Life moves in many different directions very quickly and otherwise we may not have been writing this preface.

*Paul A. Banaszekiewicz*

*Deiary F. Kader*

## Abbreviations

ABC	airway, breathing, circulation	CJD	Creutzfeldt–Jakob disease
ACJ	acromioclavicular joint	CL	capitolunate
ACL	anterior cruciate ligament	CMAP	compound muscle action potential
AD	autosomal dominant	CMC	carpometacarpal
ADL	activities of daily living	CMT	Charcot–Marie–Tooth
ADM	abductor digiti minimi	CMV	cytomegalovirus
AER	apical ectodermal ridge	CP	cerebral palsy
AFO	ankle–foot orthosis	CPM	continued passive motion
AIIS	anterior inferior iliac spine	CPN	common peroneal nerve
AIN	anterior interosseous nerve	CR	cruciate retaining
AKP	Anterior knee pain	CRP	C-reactive protein
ALL	anterior longitudinal ligament	CRPS	complex regional pain syndrome
ALVAL	aseptic lymphocyte-dominated vasculitis-associated lesions	CSF	cerebrospinal fluid
AP	anterior–posterior	CTEV	congenital talipes equinovarus
APB	abductor pollicis brevis	CVP	central venous pressure
APL	abductor pollicis longus	DCP	dynamic compression plate
AR	autosomal recessive	DCS	dynamic condylar screw
ARDS	adult respiratory distress syndrome	DD	Dupuytren's disease
AS	ankylosing spondylitis	DDH	developmental dysplasia of the hip
ASB	anatomical snuffbox	DHS	dynamic hip screw
ASIS	anterior superior iliac spine	DI	dorsal interosseous
ATD	articular–trochanteric distance	DIP	distal interphalangeal
ATFL	anterior talofibular ligament	DIPJ	distal interphalangeal joint
ATLS	Advanced Trauma Life Support	DISH	diffuse idiopathic skeletal hyperostosis
ATP	adenosine triphosphate	DISI	dorsal intercalated segmental instability
AVN	avascular necrosis	DMARDS	disease-modifying antirheumatic drugs
BDGF	bone-derived growth factor	DP	distal phalanx
BMG	bone matrix gelatin	DRUJ	distal radioulnar joint
BMP	bone morphogenetic protein	DV	dorsoventral
BMUs	basic multicellular units	DVT	deep vein thrombosis
BOA	British Orthopaedic Association	ECRB	extensor carpi radialis brevis
BPTB	bone patella tendon–bone	ECM	extracellular matrix
CAP	Clubfoot Assessment Protocol	ECRL	extensor carpi radialis longus
CCL	coracoclavicular ligament	ECU	extensor carpi ulnaris
CDH	congenital dislocation of the hip	EDB	extensor digitorum brevis
CFL	calcaneofibular ligament	EDC	extensor digitorum communis
CIA	carpal injury adaptive	EDL	extensor digitorum longus
CIC	carpal instability complex	EDM	extensor digiti minimi
CID	carpal instability dissociative	EDQ	extensor digiti quinti
CIND	carpal instability non-dissociative	EGF	epidermal growth factor
		EHL	extensor hallucis longus

## List of abbreviations

EIP	extensor indicis proprius	LRTI	ligament reconstruction tendon interposition
EMG	electromyograph	LTL	lunotriquetral ligament
EMIs	extended matching items	MCFA	medial circumflex femoral artery
EPB	extensor pollicis brevis	MCL	medial collateral ligament
EPL	extensor pollicis longus	MCP	metacarpophalangeal
ESR	erythrocyte sedimentation rate	MCQs	multiple choice questions
EUA	examination under anaesthesia	MDP	methylene diphosphonate
FBC	full blood count	MDT	multidisciplinary team
FCR	flexor carpi radialis	MEN	multiple endocrine neoplasia
FCU	flexor carpi ulnaris	MEPs	motor-evoked potentials
FDB	flexor digitorum brevis	MFC	medial femoral condyle
FDL	flexor digitorum longus	MFH	malignant fibrous histiocytoma
FDP	flexor digitorum profundus	MMP	metalloproteinase
FDQ	flexor digiti quinti	MOM	metal-on-metal
FDS	flexor digitorum superficialis	MS	multiple sclerosis
FFD	fixed flexion deformity	MSU	monosodium urate
FGF	fibroblast growth factor	MUA	manipulation under anaesthetic
FHL	flexor hallucis longus	NCS	nerve conduction studies
FPA	foot progression angle	Nf-1	neurofibromatosis type 1
FPB	flexor pollicis brevis	Nf-2	neurofibromatosis type 2
FPL	flexor pollicis longus	NICE	National Institute for Health and Clinical Excellence
FTA	foot thigh angle		
GA	general anaesthetic	NJR	National Joint Registry
GAGs	glycosaminoglycans	NSAIDs	non-steroidal anti-inflammatory drugs
GI	gastrointestinal	OA	osteoarthritis
HEA	Hilgenreiner's epiphyseal angle	OCD	osteochondritis dissecans
HMSN	hereditary motor sensory neuropathies	ODF	osteoclast differentiation factor (aka RANK ligand)
HNP	herniated nucleus pulposus	OPG	osteoprotegerin
HO	heterotopic ossification	OPLL	ossification of the posterior longitudinal ligament
HPT	hyperparathyroidism		
HTO	high tibial osteotomy	ORIF	open reduction with internal fixation
HU	Hounsfield units	ORL	oblique retinacular ligament
HVA	hallux valgus angle	PCL	posterior cruciate ligament
IDGF	insulin-derived growth factor	PD	proximodistal
II	image intensifier	PDGF	platelet-derived growth factor
ILs	interleukins	PE	pulmonary embolism
IMT	intermetatarsal	PE	polyethylene
INR	international normalized ratio	PEEK	polyetheretherketone
IP	interphalangeal	PET	positron emission tomography
IPJ	interphalangeal joint	PFFD	proximal focal femoral deficiency
ISB	Intercollegiate Specialty Boards	PFJ	patellofemoral joint
ITB	iliotibial band	PGE <sub>2</sub>	prostaglandin E2
IVC	inferior vena cava	PICU	paediatric intensive care unit
JCA	juvenile chronic arthritis	PIN	posterior interosseous nerve
JRA	juvenile rheumatoid arthritis	PIP	proximal interphalangeal
JRF	joint reaction force	PIPJ	proximal interphalangeal joint
KAFOs	knee-ankle-foot orthoses	PL	palmaris longus
LCDCP	low-contact dynamic compression plates	PLAD	posterior lip augmentation device
LCFA	lateral circumflex femoral artery	PLC	posterolateral corner
LCL	lateral collateral ligament	PLIF	posterior interbody lumbar fusion
LCP	low compression plates	PLL	posterior longitudinal ligament
LHB	long head of biceps	PMMA	polymethylmethacrylate
LISS	less invasive stabilization system	PNET	primitive neuroectodermal tumour
LLD	limb length discrepancy
