<i>Notation, units and conventions</i>	xiv
1 A short review of standard and inflationary cosmology	1
1.1 The standard cosmological model	1
1.2 The inflationary cosmological model	20
References	35
2 The basic string cosmology equations	37
2.1 Tree-level equations	38
2.2 The Einstein-frame representation	45
2.3 First-order α' corrections	52
Appendix 2A Differential forms in a Riemannian manifold	64
References	70
3 Conformal invariance and string effective actions	71
3.1 Strings in curved backgrounds and conformal anomalies	72
3.2 Higher-curvature and higher-genus expansion	84
Appendix 3A The massless multiplet of the bosonic string in Minkowski space	91
Appendix 3B Superstring models and effective actions	104
References	130
4 Duality symmetries and cosmological solutions	132
4.1 Scale-factor duality and the pre-big bang scenario	134
4.2 Duality with matter sources	142
4.3 Global $O(d, d)$ symmetry	157
Appendix 4A A non-local, general-covariant dilaton potential	174

viii	<i>Contents</i>	
	Appendix 4B Examples of regular and self-dual solutions	181
	References	192
5	Inflationary kinematics	194
	5.1 Four different types of inflation	195
	5.2 Dynamical equivalence of super-inflation and accelerated contraction	198
	5.3 Horizons and kinematics	202
	References	209
6	The string phase	210
	6.1 High-curvature fixed points of the string cosmology equations	213
	6.2 Strong coupling corrections and the curvature “bounce”	223
	6.3 String gas cosmology	231
	Appendix 6A Birth of the Universe in quantum string cosmology	239
	References	250
7	The cosmic background of relic gravitational waves	253
	7.1 Propagation of tensor perturbations	254
	7.2 Parametric amplification and spectral distribution	266
	7.3 Expected relic gravitons from inflation	287
	7.4 Sensitivities and cross-correlation of gravitational detectors	310
	Appendix 7A Higher-derivative corrections to the tensor perturbation equations	323
	References	331
8	Scalar perturbations and the anisotropy of the CMB radiation	334
	8.1 Scalar perturbations in a cosmological background	335
	8.2 The anisotropy spectrum of the CMB radiation	362
	8.3 Adiabatic metric perturbations from the string theory axion	389
	Appendix 8A Photon–dilaton interactions and cosmic magnetic fields	408
	Appendix 8B Seeds for the CMB anisotropy	416
	References	424
9	Dilaton phenomenology	428
	9.1 Spectral intensity of a massive dilaton background	429
	9.2 Interaction with gravitational antennas	445
	9.3 Dilaton dark energy and late-time acceleration	463
	Appendix 9A The common mode of interferometric detectors	478
	References	482
10	Elements of brane cosmology	484
	10.1 Effective gravity on the brane	487
	10.2 Warped geometry and localization of gravity	496

	<i>Contents</i>	ix
10.3 Brane-world cosmology		508
10.4 Ekpyrotic and cyclic scenario		523
10.5 Brane–antibrane inflation		533
References		545
<i>Index</i>		548
