	<i>Preface</i>	<i>page xiii</i>
1	Introduction	1
	1.1 Why FDTD?	1
	1.2 Other methods	2
	1.2.1 Finite volume time domain	2
	1.2.2 Finite difference frequency domain	3
	1.2.3 Finite element methods	4
	1.2.4 Spectral methods	5
	1.3 Organization	5
	References	6
2	Review of electromagnetic theory	8
	2.1 Constitutive relations and material properties	11
	2.2 Time-harmonic Maxwell’s equations	13
	2.3 Complex permittivity: dielectric losses	15
	2.4 Complex permeability: magnetic losses	17
	2.5 Equivalent magnetic currents	17
	2.6 Electromagnetic potentials	19
	2.7 Electromagnetic boundary conditions	21
	2.8 Electromagnetic waves	23
	2.8.1 The wave equation	25
	2.8.2 Group velocity	27
	2.9 The electromagnetic spectrum	28
	2.10 Summary	30
	2.11 Problems	32
	References	33
3	Partial differential equations and physical systems	34
	3.1 Classification of partial differential equations	37
	3.1.1 Elliptic PDEs	38
	3.1.2 Parabolic PDEs	38
	3.1.3 Hyperbolic PDEs	39

3.2	Numerical integration of ordinary differential equations	41
3.2.1	First-order Euler method	42
3.2.2	The leapfrog method	44
3.2.3	Runge-Kutta methods	45
3.3	Finite difference approximations of partial differential equations	46
3.3.1	Derivatives in time	48
3.3.2	Derivatives in space	51
3.3.3	Finite difference versions of PDEs	52
3.4	Finite difference solutions of the convection equation	53
3.4.1	The forward-time centered space method	54
3.4.2	The leapfrog method	57
3.4.3	The Lax-Wendroff methods	60
3.5	Finite difference methods for two coupled first-order convection equations	63
3.6	Higher-order differencing schemes	65
3.7	Summary	67
3.8	Problems	68
	References	71
4	The FDTD grid and the Yee algorithm	72
4.1	Maxwell's equations in one dimension	74
4.1.1	Example 1D simulations	77
4.2	Maxwell's equations in two dimensions	78
4.2.1	Transverse electric (TE) mode	80
4.2.2	Transverse magnetic (TM) mode	81
4.2.3	Example 2D simulations	82
4.3	FDTD expressions in three dimensions	84
4.3.1	Example 3D simulation	87
4.4	FDTD algorithm for lossy media	88
4.4.1	1D waves in lossy media: waves on lossy transmission lines	88
4.4.2	2D and 3D waves in lossy media	90
4.5	Divergence-free nature of the FDTD algorithm	92
4.6	The FDTD method in other coordinate systems	93
4.6.1	2D polar coordinates	94
4.6.2	2D cylindrical coordinates	97
4.6.3	3D cylindrical coordinates	101
4.6.4	3D spherical coordinates	104
4.7	Summary	107
4.8	Problems	108
	References	112

	Contents	ix
5	Numerical stability of finite difference methods	113
5.1	The convection equation	114
5.1.1	The forward-time centered space method	115
5.1.2	The Lax method	116
5.1.3	The leapfrog method	119
5.2	Two coupled first-order convection equations	120
5.2.1	The forward-time centered space method	121
5.2.2	The Lax method	122
5.2.3	The leapfrog method	124
5.2.4	The interleaved leapfrog and FDTD method	126
5.3	Stability of higher dimensional FDTD algorithms	127
5.4	Summary	128
5.5	Problems	129
	References	131
6	Numerical dispersion and dissipation	132
6.1	Dispersion of the Lax method	133
6.2	Dispersion of the leapfrog method	136
6.3	Dispersion relation for the FDTD algorithm	140
6.3.1	Group velocity	141
6.3.2	Dispersion of the wave equation	143
6.3.3	Dispersion relation in 2D and 3D	143
6.3.4	Numerical dispersion of lossy Maxwell's equations	145
6.4	Numerical stability of the FDTD algorithm revisited	147
6.5	Summary	148
6.6	Problems	149
	References	151
7	Introduction of sources	152
7.1	Internal sources	152
7.1.1	Hard sources	152
7.1.2	Current and voltage sources	153
7.1.3	The thin-wire approximation	154
7.2	External sources: total and scattered fields	156
7.2.1	Total-field and pure scattered-field formulations	158
7.3	Total-field/scattered-field formulation	159
7.3.1	Example 2D TF/SF formulations	162
7.4	Total-field/scattered-field in three dimensions	165
7.4.1	Calculating the incident field	168
7.5	FDTD calculation of time-harmonic response	168
7.6	Summary	169
7.7	Problems	170
	References	173

X	Contents	
8	Absorbing boundary conditions	174
8.1	ABCs based on the one-way wave equation	176
8.1.1	First-order Mur boundary	176
8.1.2	Higher dimensional wave equations: second-order Mur	177
8.1.3	Higher-order Mur boundaries	182
8.1.4	Performance of the Mur boundaries	184
8.1.5	Mur boundaries in 3D	186
8.2	Other radiation operators as ABCs	188
8.2.1	Bayliss-Turkel operators	188
8.2.2	Higdon operators	191
8.3	Summary	193
8.4	Problems	195
	References	197
9	The perfectly matched layer	199
9.1	Oblique incidence on a lossy medium	200
9.1.1	Uniform plane wave incident on general lossy media	202
9.2	The Bérenger PML medium	205
9.2.1	Bérenger split-field PML in 3D	209
9.2.2	Grading the PML	210
9.2.3	Example split-field simulation	211
9.3	Perfectly matched uniaxial medium	212
9.3.1	Bérenger's PML as an anisotropic medium	217
9.4	FDTD implementation of the UPML	218
9.5	Alternative implementation via auxiliary fields	222
9.6	Convolutional perfectly matched layer (CPML)	225
9.6.1	Example simulation using the CPML	228
9.7	Summary	231
9.8	Problems	233
	References	235
10	FDTD modeling in dispersive media	237
10.1	Recursive convolution method	238
10.1.1	Debye materials	239
10.1.2	Lorentz materials	244
10.1.3	Drude materials	248
10.1.4	Isotropic plasma	250
10.1.5	Improvement to the Debye and Lorentz formulations	252
10.2	Auxiliary differential equation method	253
10.2.1	Debye materials	254
10.2.2	Formulation for multiple Debye poles	254
10.2.3	Lorentz materials	257
10.2.4	Drude materials	259

	Contents	xi
10.3	Summary	260
10.4	Problems	262
	References	264
11	FDTD modeling in anisotropic media	265
11.1	FDTD method in arbitrary anisotropic media	265
11.2	FDTD in liquid crystals	268
11.2.1	FDTD formulation	271
11.3	FDTD in a magnetized plasma	274
11.3.1	Implementation in FDTD	277
11.4	FDTD in ferrites	281
11.4.1	Implementation in FDTD	284
11.5	Summary	287
11.6	Problems	288
	References	290
12	Some advanced topics	291
12.1	Modeling periodic structures	291
12.1.1	Direct-field methods	292
12.1.2	Field-transformation methods	296
12.2	Modeling fine geometrical features	302
12.2.1	Diagonal split-cell model	302
12.2.2	Average properties model	304
12.2.3	The narrow slot	305
12.2.4	Dey-Mitra techniques	306
12.2.5	Thin material sheets	309
12.3	Bodies of revolution	311
12.4	Near-to-far field transformation	316
12.4.1	Frequency domain formulation	317
12.4.2	Time domain implementation	320
12.5	Summary	323
12.6	Problems	324
	References	326
13	Unconditionally stable implicit FDTD methods	327
13.1	Implicit versus explicit finite difference methods	328
13.1.1	The forward-time centered space method	328
13.1.2	The backward-time centered space method	329
13.2	Crank-Nicolson methods	331
13.3	Alternating direction implicit (ADI) method	333
13.3.1	Accuracy of the ADI method	337

xii	Contents	
	13.4 Summary	339
	13.5 Problems	339
	References	340
14	Finite difference frequency domain	342
	14.1 FDFD via the wave equation	342
	14.2 Laplace matrix and Kronecker product	345
	14.3 Wave equation in 2D	349
	14.4 Wave equation in 3D	351
	14.5 FDFD from Maxwell's equations	352
	14.6 Summary	353
	14.7 Problems	354
	References	355
15	Finite volume and finite element methods	356
	15.1 Irregular grids	356
	15.1.1 Nonuniform, orthogonal grids	357
	15.1.2 Nonorthogonal structured grids	360
	15.1.3 Unstructured grids	360
	15.2 The finite volume method	361
	15.2.1 Maxwell's equations in conservative form	362
	15.2.2 Interleaved finite volume method	364
	15.2.3 The Yee finite volume method	366
	15.3 The finite element method	368
	15.3.1 Example using Galerkin's method	370
	15.3.2 TE wave incident on a dielectric boundary	375
	15.4 Discontinuous Galerkin method	377
	15.5 Summary	382
	15.6 Problems	383
	References	383
