|--|------------------|
| <i>Preface</i> | <i>page</i> xiii |
| <i>Acknowledgments</i> | xv |
| 1 Introduction | 1 |
| 1.1 Contextual Framework | 2 |
| 1.2 Lessons Learned and Contextual Framework | 4 |
| 1.3 Crack Tolerance and Residual Strength | 5 |
| 1.4 Crack Growth Resistance and Subcritical Crack Growth | 7 |
| 1.5 Objective and Scope of Book | 7 |
| REFERENCES | 8 |
| 2 Physical Basis of Fracture Mechanics | 9 |
| 2.1 Classical Theories of Failure | 9 |
| 2.1.1 Maximum Principal Stress (or Tresca [3]) Criterion | 9 |
| 2.1.2 Maximum Shearing Stress Criterion | 10 |
| 2.1.3 Maximum Principal Strain Criterion | 10 |
| 2.1.4 Maximum Total Strain Energy Criterion | 10 |
| 2.1.5 Maximum Distortion Energy Criterion | 11 |
| 2.1.6 Maximum Octahedral Shearing Stress Criterion (von Mises [4] Criterion) | 12 |
| 2.1.7 Comments on the Classical Theories of Failure | 12 |
| 2.2 Further Considerations of Classical Theories | 12 |
| 2.3 Griffith's Crack Theory of Fracture Strength | 14 |
| 2.4 Modifications to Griffith's Theory | 16 |
| 2.5 Estimation of Crack-Driving Force G from Energy Loss Rate (Irwin and Kies [8, 9]) | 17 |
| 2.6 Experimental Determination of G | 20 |
| 2.7 Fracture Behavior and Crack Growth Resistance Curve | 21 |
| REFERENCES | 25 |

| | |
|--|----|
| 3 Stress Analysis of Cracks | 26 |
| 3.1 Two-Dimensional Theory of Elasticity | 26 |
| 3.1.1 Stresses | 27 |
| 3.1.2 Equilibrium | 27 |
| 3.1.3 Stress-Strain and Strain-Displacement Relations | 28 |
| 3.1.4 Compatibility Relationship | 29 |
| 3.2 Airy's Stress Function | 30 |
| 3.2.1 Basic Formulation | 30 |
| 3.2.2 Method of Solution Using Functions of Complex Variables | 32 |
| Complex Numbers | 32 |
| Complex Variables and Functions | 32 |
| Cauchy-Riemann Conditions and Analytic Functions | 33 |
| 3.3 Westergaard Stress Function Approach [8] | 34 |
| 3.3.1 Stresses | 34 |
| 3.3.2 Displacement (Generalized Plane Stress) | 35 |
| 3.3.3 Stresses at a Crack Tip and Definition of Stress Intensity Factor | 36 |
| 3.4 Stress Intensity Factors – Illustrative Examples | 38 |
| 3.4.1 Central Crack in an Infinite Plate under Biaxial Tension (Griffith Problem) | 39 |
| Stress Intensity Factor | 39 |
| Displacements | 41 |
| 3.4.2 Central Crack in an Infinite Plate under a Pair of Concentrated Forces [2–4] | 41 |
| 3.4.3 Central Crack in an Infinite Plate under Two Pairs of Concentrated Forces | 43 |
| 3.4.4 Central Crack in an Infinite Plate Subjected to Uniformly Distributed Pressure on Crack Surfaces | 43 |
| 3.5 Relationship between G and K | 45 |
| 3.6 Plastic Zone Correction Factor and Crack-Opening Displacement | 47 |
| Plastic Zone Correction Factor | 47 |
| Crack-Tip-Opening Displacement (CTOD) | 48 |
| 3.7 Closing Comments | 48 |
| REFERENCES | 49 |
| 4 Experimental Determination of Fracture Toughness | 50 |
| 4.1 Plastic Zone and Effect of Constraint | 50 |
| 4.2 Effect of Thickness; Plane Strain versus Plane Stress | 52 |
| 4.3 Plane Strain Fracture Toughness Testing | 54 |
| 4.3.1 Fundamentals of Specimen Design and Testing | 55 |
| 4.3.2 Practical Specimens and the “Pop-in” Concept | 58 |
| 4.3.3 Summary of Specimen Size Requirement | 60 |

Contents

| | |
|---|------------|
| 4.3.4 Interpretation of Data for Plane Strain Fracture Toughness Testing | 61 |
| 4.4 Crack Growth Resistance Curve | 67 |
| 4.5 Other Modes/Mixed Mode Loading | 70 |
| REFERENCES | 70 |
| 5 Fracture Considerations for Design (Safety) | 72 |
| 5.1 Design Considerations (Irwin’s Leak-Before-Break Criterion) | 72 |
| 5.1.1 Influence of Yield Strength and Material Thickness | 74 |
| 5.1.2 Effect of Material Orientation | 74 |
| 5.2 Metallurgical Considerations (Krafft’s Tensile Ligament Instability Model [4]) | 75 |
| 5.3 Safety Factors and Reliability Estimates | 78 |
| 5.3.1 Comparison of Distribution Functions | 81 |
| 5.3.2 Influence of Sample Size | 82 |
| 5.4 Closure | 84 |
| REFERENCES | 85 |
| 6 Subcritical Crack Growth: Creep-Controlled Crack Growth | 86 |
| 6.1 Overview | 86 |
| 6.2 Creep-Controlled Crack Growth: Experimental Support | 87 |
| 6.3 Modeling of Creep-Controlled Crack Growth | 90 |
| 6.3.1 Background for Modeling | 92 |
| 6.3.2 Model for Creep | 93 |
| 6.3.3 Modeling for Creep Crack Growth | 94 |
| 6.4 Comparison with Experiments and Discussion | 97 |
| 6.4.1 Comparison with Experimental Data | 97 |
| 6.4.2 Model Sensitivity to Key Parameters | 99 |
| 6.5 Summary Comments | 101 |
| REFERENCES | 101 |
| 7 Subcritical Crack Growth: Stress Corrosion Cracking and Fatigue Crack Growth (Phenomenology) | 103 |
| 7.1 Overview | 103 |
| 7.2 Methodology | 104 |
| 7.2.1 Stress Corrosion Cracking | 106 |
| 7.2.2 Fatigue Crack Growth | 108 |
| 7.2.3 Combined Stress Corrosion Cracking and Corrosion Fatigue | 110 |
| 7.3 The Life Prediction Procedure and Illustrations [4] | 111 |
| Example 1 – Through-Thickness Crack | 111 |
| Example 2 – For Surface Crack or Part-Through Crack | 114 |
| 7.4 Effects of Loading and Environmental Variables | 115 |

| | | |
|----------|---|------------|
| 7.5 | Variability in Fatigue Crack Growth Data | 118 |
| 7.6 | Summary Comments | 118 |
| | REFERENCES | 119 |
| 8 | Subcritical Crack Growth: Environmentally Enhanced Crack Growth under Sustained Loads (or Stress Corrosion Cracking) | 120 |
| 8.1 | Overview | 120 |
| 8.2 | Phenomenology, a Clue, and Methodology | 121 |
| 8.3 | Processes that Control Crack Growth | 123 |
| 8.4 | Modeling of Environmentally Enhanced (Sustained-Load) Crack Growth Response | 124 |
| | Modeling Assumptions | 126 |
| 8.4.1 | Gaseous Environments | 127 |
| | 8.4.1.1 Transport-Controlled Crack Growth | 129 |
| | 8.4.1.2 Surface Reaction and Diffusion-Controlled Crack Growth | 130 |
| 8.4.2 | Aqueous Environments | 131 |
| 8.4.3 | Summary Comments | 133 |
| 8.5 | Hydrogen-Enhanced Crack Growth: Rate-Controlling Processes and Hydrogen Partitioning | 133 |
| 8.6 | Electrochemical Reaction-Controlled Crack Growth (Hydrogen Embrittlement) | 137 |
| 8.7 | Phase Transformation and Crack Growth in Yttria-Stabilized Zirconia | 141 |
| 8.8 | Oxygen-Enhanced Crack Growth in Nickel-Based Superalloys | 143 |
| 8.8.1 | Crack Growth | 144 |
| 8.8.2 | High-Temperature Oxidation | 146 |
| 8.8.3 | Interrupted Crack Growth | 148 |
| | 8.8.3.1 Mechanically Based (Crack Growth) Experiments | 148 |
| | 8.8.3.2 Chemically Based Experiments (Surface Chemical Analyses) | 149 |
| 8.8.4 | Mechanism for Oxygen-Enhanced Crack Growth in the P/M Alloys | 153 |
| 8.8.5 | Importance for Material Damage Prognosis and Life Cycle Engineering | 154 |
| 8.9 | Summary Comments | 155 |
| | REFERENCES | 155 |
| 9 | Subcritical Crack Growth: Environmentally Assisted Fatigue Crack Growth (or Corrosion Fatigue) | 158 |
| 9.1 | Overview | 158 |
| 9.2 | Modeling of Environmentally Enhanced Fatigue Crack Growth Response | 158 |
| 9.2.1 | Transport-Controlled Fatigue Crack Growth | 160 |

Contents

xi

| | | |
|-----------|--|------------|
| 9.2.2 | Surface/Electrochemical Reaction-Controlled Fatigue Crack Growth | 161 |
| 9.2.3 | Diffusion-Controlled Fatigue Crack Growth | 162 |
| 9.2.4 | Implications for Material/Response | 162 |
| 9.2.5 | Corrosion Fatigue in Binary Gas Mixtures [3] | 162 |
| 9.2.6 | Summary Comments | 164 |
| 9.3 | Moisture-Enhanced Fatigue Crack Growth in Aluminum Alloys [1, 2, 5] | 164 |
| 9.3.1 | Alloy 2219-T851 in Water Vapor [1, 2] | 164 |
| 9.3.2 | Alloy 7075-T651 in Water Vapor and Water [5] | 167 |
| 9.3.3 | Key Findings and Observations | 168 |
| 9.4 | Environmentally Enhanced Fatigue Crack Growth in Titanium Alloys [6] | 169 |
| 9.4.1 | Influence of Water Vapor Pressure on Fatigue Crack Growth | 169 |
| 9.4.2 | Surface Reaction Kinetics | 169 |
| 9.4.3 | Transport Control of Fatigue Crack Growth | 171 |
| 9.4.4 | Hydride Formation and Strain Rate Effects | 173 |
| 9.5 | Microstructural Considerations | 175 |
| 9.6 | Electrochemical Reaction-Controlled Fatigue Crack Growth | 177 |
| 9.7 | Crack Growth Response in Binary Gas Mixtures | 180 |
| 9.8 | Summary Comments | 180 |
| | REFERENCES | 181 |
| 10 | Science-Based Probability Modeling and Life Cycle Engineering and Management | 183 |
| 10.1 | Introduction | 183 |
| 10.2 | Framework | 184 |
| 10.3 | Science-Based Probability Approach | 185 |
| 10.3.1 | Methodology | 185 |
| 10.3.2 | Comparison of Approaches | 186 |
| 10.4 | Corrosion and Corrosion Fatigue in Aluminum Alloys, and Applications | 187 |
| 10.4.1 | Particle-Induced Pitting in an Aluminum Alloy | 187 |
| 10.4.2 | Impact of Corrosion and Fatigue Crack Growth on Fatigue Lives (S-N Response) | 191 |
| 10.4.3 | S-N versus Fracture Mechanics (FM) Approaches to Corrosion Fatigue and Resolution of a Dichotomy | 193 |
| 10.4.4 | Evolution and Distribution of Damage in Aging Aircraft | 193 |
| 10.5 | S-N Response for Very-High-Cycle Fatigue (VHCF) | 194 |
| 10.6 | Summary | 197 |
| | REFERENCES | 197 |
