I An Introduction to the Techniques

1 An Introduction to Approximation Algorithms	3
1.1 The Whats and Whys of Approximation Algorithms	3
1.2 An Introduction to the Techniques and to Linear Programming: The Set Cover Problem	6
1.3 A Deterministic Rounding Algorithm	9
1.4 Rounding a Dual Solution	10
1.5 Constructing a Dual Solution: The Primal-Dual Method	14
1.6 A Greedy Algorithm	15
1.7 A Randomized Rounding Algorithm	19
Exercises	22
Chapter Notes	24
2 Greedy Algorithms and Local Search	27
2.1 Scheduling Jobs with Deadlines on a Single Machine	28
2.2 The k -Center Problem	30
2.3 Scheduling Jobs on Identical Parallel Machines	32
2.4 The Traveling Salesman Problem	35
2.5 Maximizing Float in Bank Accounts	40
2.6 Finding Minimum-Degree Spanning Trees	43
2.7 Edge Coloring	47
Exercises	51
Chapter Notes	54
3 Rounding Data and Dynamic Programming	57
3.1 The Knapsack Problem	57
3.2 Scheduling Jobs on Identical Parallel Machines	61

vi	CONTENTS	
3.3	The Bin-Packing Problem	66
	Exercises	70
	Chapter Notes	71
4	Deterministic Rounding of Linear Programs	73
4.1	Minimizing the Sum of Completion Times on a Single Machine	74
4.2	Minimizing the Weighted Sum of Completion Times on a Single Machine	76
4.3	Solving Large Linear Programs in Polynomial Time via the Ellipsoid Method	79
4.4	The Prize-Collecting Steiner Tree Problem	80
4.5	The Uncapacitated Facility Location Problem	83
4.6	The Bin-Packing Problem	88
	Exercises	93
	Chapter Notes	96
5	Random Sampling and Randomized Rounding of Linear Programs	99
5.1	Simple Algorithms for MAX SAT and MAX CUT	100
5.2	Derandomization	103
5.3	Flipping Biased Coins	104
5.4	Randomized Rounding	106
5.5	Choosing the Better of Two Solutions	109
5.6	Nonlinear Randomized Rounding	111
5.7	The Prize-Collecting Steiner Tree Problem	113
5.8	The Uncapacitated Facility Location Problem	116
5.9	Scheduling a Single Machine with Release Dates	119
5.10	Chernoff Bounds	124
5.11	Integer Multicommodity Flows	128
5.12	Random Sampling and Coloring Dense 3-Colorable Graphs	130
	Exercises	132
	Chapter Notes	135
6	Randomized Rounding of Semidefinite Programs	137
6.1	A Brief Introduction to Semidefinite Programming	137
6.2	Finding Large Cuts	139
6.3	Approximating Quadratic Programs	143
6.4	Finding a Correlation Clustering	146
6.5	Coloring 3-Colorable Graphs	149
	Exercises	152
	Chapter Notes	155
7	The Primal-Dual Method	157
7.1	The Set Cover Problem: A Review	157
7.2	Choosing Variables to Increase: The Feedback Vertex Set Problem in Undirected Graphs	160
7.3	Cleaning Up the Primal Solution: The Shortest s - t Path Problem	164
7.4	Increasing Multiple Variables at Once: The Generalized Steiner Tree Problem	167

CONTENTS	vii
7.5 Strengthening Inequalities: The Minimum Knapsack Problem	174
7.6 The Uncapacitated Facility Location Problem	177
7.7 Lagrangean Relaxation and the k -Median Problem	182
Exercises	188
Chapter Notes	191
8 Cuts and Metrics	193
8.1 The Multiway Cut Problem and a Minimum-Cut-Based Algorithm	194
8.2 The Multiway Cut Problem and an LP Rounding Algorithm	195
8.3 The Multicut Problem	201
8.4 Balanced Cuts	206
8.5 Probabilistic Approximation of Metrics by Tree Metrics	210
8.6 An Application of Tree Metrics: Buy-at-Bulk Network Design	215
8.7 Spreading Metrics, Tree Metrics, and Linear Arrangement	218
Exercises	224
Chapter Notes	227
II Further Uses of the Techniques	
9 Further Uses of Greedy and Local Search Algorithms	231
9.1 A Local Search Algorithm for the Uncapacitated Facility Location Problem	232
9.2 A Local Search Algorithm for the k -Median Problem	238
9.3 Minimum-Degree Spanning Trees	242
9.4 A Greedy Algorithm for the Uncapacitated Facility Location Problem	246
Exercises	251
Chapter Notes	253
10 Further Uses of Rounding Data and Dynamic Programming	255
10.1 The Euclidean Traveling Salesman Problem	256
10.2 The Maximum Independent Set Problem in Planar Graphs	267
Exercises	275
Chapter Notes	277
11 Further Uses of Deterministic Rounding of Linear Programs	279
11.1 The Generalized Assignment Problem	280
11.2 Minimum-Cost Bounded-Degree Spanning Trees	284
11.3 Survivable Network Design and Iterated Rounding	296
Exercises	303
Chapter Notes	307
12 Further Uses of Random Sampling and Randomized Rounding of Linear Programs	309
12.1 The Uncapacitated Facility Location Problem	310
12.2 The Single-Source Rent-or-Buy Problem	314
12.3 The Steiner Tree Problem	316

viii	CONTENTS	
12.4	Everything at Once: Finding a Large Cut in a Dense Graph	324
	Exercises	329
	Chapter Notes	331
13	Further Uses of Randomized Rounding of Semidefinite Programs	333
13.1	Approximating Quadratic Programs	334
13.2	Coloring 3-Colorable Graphs	341
13.3	Unique Games	345
	Exercises	352
	Chapter Notes	354
14	Further Uses of the Primal-Dual Method	355
14.1	The Prize-Collecting Steiner Tree Problem	355
14.2	The Feedback Vertex Set Problem in Undirected Graphs	360
	Exercises	366
	Chapter Notes	368
15	Further Uses of Cuts and Metrics	369
15.1	Low-Distortion Embeddings and the Sparsest Cut Problem	370
15.2	Oblivious Routing and Cut-Tree Packings	377
15.3	Cut-Tree Packings and the Minimum Bisection Problem	383
15.4	The Uniform Sparsest Cut Problem	387
	Exercises	406
	Chapter Notes	408
16	Techniques in Proving the Hardness of Approximation	409
16.1	Reductions from NP-Complete Problems	410
16.2	Reductions that Preserve Approximation	414
16.3	Reductions from Probabilistically Checkable Proofs	424
16.4	Reductions from Label Cover	429
16.5	Reductions from Unique Games	442
	Chapter Notes	450
17	Open Problems	453
	Appendix A: Linear Programming	459
	Appendix B: NP-Completeness	465
	<i>Bibliography</i>	469
	<i>Author Index</i>	485
	<i>Subject Index</i>	491
