Index of Subjects

As throughout the book, → stands for ‘see’.

Within entries, general references are given first, followed by more specific references, organized alphabetically (with Greek words following English words). However, references to Part I (Phonology/Morphology) are listed together before those to Parts II (Syntax) and/or Part III (Textual Coherence), if both occur: they are separated by three vertical bars |||. The same divider is used to set off, at the end of entries, references to further relevant entries, of the type ‘also →’.

In cases where a full overview of uses of a certain form, construction, etc., is given in a chapter or section within the book, the index in some cases gives a reference to that overview instead of individual uses.
