Foreword	v
1. Germs with constant rank	1
2. Regular values	9
3. Construction of differentiable maps	22
4. Germs and jets	27
5. The division theorem	40
6. The preparation theorem	53
7. Symmetric germs	63
8. Mappings of the plane into the plane	65
9. Boardman-Thom singularities	78
10. The quadratic differential	85
11. Finitely determined germs	92
12. Some elementary algebraic geometry	104
13. Tougeron's theory	115
14. The universal unfolding of a singularity	120
15. The seven elementary catastrophes	128
16. Proof of the main theorem on universal unfoldings	135
17. Pictures of the seven elementary catastrophes	144
Further reading - literature on catastrophe theory	172
Index of symbols	176
Index	177
