[More information](#)

## Index

### A

- abstraction, theory of, 105–106
- Abstract Universal, 103, 104, 108
- Acanthostega*, digit form in, 142
- Acetabularia acetabulum*
  - cell wall dynamics in, 202, 249
  - life cycle of, 194–197, 215
  - as member of *Dasycladales*, 194, 212
  - morphogenesis in, 130, 211, 233, 234, 235, 237, 246, 248
  - phenocopies of, 213
  - regeneration in, 204, 210
  - simulations of morphogenesis in, 202–209
  - stalk morphology of, 214
  - whorled laterals in, 197, 198, 206, 210, 212
- Acetabulariaceae*, lateral morphology in, 213
- Acetabularia crenulata*, morphology of, 212
- actin, calcium effects on polymerisation of, 199
- action, paradigms of, 90–94
- activin, role in *Xenopus* development, 185
- actomyosin, calcium effects on activity of, 199, 200
- aequorin, effects on *Drosophila* embryo, 180, 183
- affine geometry, 107
- aggregation
  - in mesenchyme cells, 145
  - role in cell adhesion, 145
- algae. *See also Acetabularia*
  - environmental factors affecting, 201–202
- alimentary canal, vertebrate formation of, 242
- alkanes
  - as homologous series, 109
  - rational system of, 30
- alkenes, as series, 109
- alkynes, as series, 109
- alligators
  - polarising zone in, 135
  - sexual morphology of, 78–80
- Ambystoma mexicanum*, limb structure and development in, 141, 151
- amphibians, 51
  - embryology of, 96–97, 100
  - field phenomena in, 96
  - limb form of, 140, 141
  - polarising zone in, 135
  - regeneration studies on, 188
- annelids, asexual reproduction in, 165
- ant colonies, emergent order in, 232
- antero–postero axis modifications, in limb development, 146, 152
- antisense RNA, use to reduce gene product, 175
- aristopaedia* gene, 93
- Aristotle, 13, 14, 17, 21, 22, 27, 105, 118
  - entelechy concept of, 97, 100
  - hierarchy of concepts of, 24
  - modern biology and, 3–7

- “arranging factor”, concept of, 98  
 arthropods, possible polyphyletic origin of, 248  
 asexual reproduction, 125  
 atomism, 23, 85, 97, 98, 132, 134  
 Atran, S., on taxonomy, 23  
 aubergine, 57  
 axial order, establishment in limb-forming process, 146
- B**
- bacterial adaptation, 250  
 bacterial flagellum, formation of, 133  
 Baer, K. E. von, 122–123  
 Bateson, W., 7, 124, 165, 188, 192, 224  
   on common ancestor, 65  
   critique of Darwinian concept of inheritance, 66  
   on forms, 6, 9, 13, 37, 99, 125  
   on genetics, 84, 89, 97  
   on homoeotic variation, 88  
   on homology, 142, 143  
   on morphological correspondence, 19, 66  
   on variation, 21, 26, 69, 115, 116  
 bat-wing structure, 141  
 Bauplans, 16–17, 49, 119, 122  
 beetle, gene expression in, 185  
 Belousov–Zhabotinsky reaction, 185, 232  
 Bergson, H., 117  
 Bertalanffy, L. von, 94  
 Bhaskar, R., 51, 52, 101  
   on causes, 91, 92–93, 115  
   on empirical classifications, 14, 38, 39, 100  
   on essentialism, 14  
   on realism, 10, 12, 60, 113  
   on scientific-investigation stages, 10–11  
*bicaudal* mutant, of *Drosophila*, 154–157, 158, 163–164, 165, 167, 177, 178  
*bicoid* mutant, of *Drosophila*, 163–164, 165, 177, 186  
 bifurcation  
   in limb formation, 147, 152  
   in phyllotaxis, 220  
   spontaneous, 232  
   symmetry-breaking, 205  
 billiard-ball paradigm, 91  
 binary code, for gene action on pattern formation, 179  
 binomial system of nomenclature, 59–60  
 biological clocks, 171  
 biological homology, 152  
 biological kinds, theory of, 232  
 biological transformations, D’Arcy Thompson on, 116–120  
 biology, modern, Aristotle and, 3–4  
 birds  
   alimentary canal formation in, 242  
   polarising zone in, 135  
 blastopore, formation in embryo, 236  
 blastula, gastrulation in, 235, 236  
*The Blind Watchmaker* (Dawkins), 132  
*Bonellia*, sex determination in, 78, 80  
*Bornatella sphaerica*, lateral morphology in, 213  
 Bosch, Hieronymous, 68  
 Boyle’s Law, 73  
 Brady, R. H., 16, 101, 111–113, 114, 115  
 brains, emergent order in, 232  
 brambles, Darwin on, 69  
 bristle-forming cells, *eyeless* mutation of, 86  
 Buffon, G. L. L., Comte de, 26  
 Bulbocodium, 68
- C**
- calcium  
   effect on alga morphogenesis, 198, 213  
   effects on cell walls, 213  
   effects on cytoplasm, 200  
   effects on cytoskeleton, 198–200  
   environment effects on levels of, 248  
   calcium annulus, in algal growth, 205–208  
   calcium–cytoskeletal dynamics, 202, 203, 215, 239  
*Callosobruchus*, bicaudal phenotypes of, 157

## Index

275

- calmodulin, calcium-level control by, 228
- Camper, Peter, 118
- canalisation, Waddington's concept of, 252
- carbon, polymorphic forms of, 133
- Cassirer, E., 19, 24, 101, 115  
on concept of form, 104–109, 110–113, 121–122  
as founder of philosophical structuralism, 104  
on nature of concepts, 24–25
- caudal* mutants, of *Drosophila*, 166
- causal laws, 11–12
- causal mechanisms, in genetics, 86
- causal power, 229–230
- cells  
adhesiveness of, 145–146, 239  
curvature of sheets of, 245  
interaction of, 132
- cell walls  
calcium effects on, 213  
dynamics of, 202
- Chance and Necessity* (Monod), 132
- chemical elements, identity of, 43–44
- chemistry, essentialism in, 23
- chick, limb forms of, 140, 141, 148, 149
- chick leg mesoderm cells, limbs formed from, 138–139
- chick limb buds, limblike structures from, 135
- Chladni figures, 99
- chloride ions, algal growth and, 201
- chlorine isotopes, 56
- chlorotetracycline (CTC), use in fluorescence studies of cell tips, 209
- Chordata, 17, 34, 49  
properties of, 22
- chromosomes, 83, 84, 85  
DNA sequences in, 131
- ciliate protozoa  
cortical inheritance in, 222  
inheritance of acquired forms in, 134
- classes, 13–14, 33–34  
equivalence, 34  
traditional (Aristotelian), 14
- classification, 33  
Darwin on, 27  
empirical, 13–25, 102  
phylogenetic, 48
- cleavage patterns, Driesch's experiments on, 83–84
- clockface model  
applied to ciliate doublet regulation, 225, 226  
applied to limb regeneration, 188–191
- cobalt ions, effect on alga morphogenesis, 198
- cockroach, 89  
limb regeneration studies on, 188, 191–192
- coelomates, possible polyphyletic origin of, 248
- coexistence, "laws" of, 13–14
- coexisting properties, independence of, 6
- cohesiveness, of species taxa, 34–35
- The Collapse of Chaos* (Cohen and Stewart), 232
- colour-wheel model  
application to ciliate doublet regulation, 226–227  
application to limb regeneration, 190–191  
epigenetic maps and, 172–179, 182  
limitation of, 185
- common ancestor, search for, 65
- common descent, hypothesis of, 65
- "Common Progenitor", 20, 70
- "common sense" notions, of individuals, 5, 6, 13, 67–68
- comparative morphology, early work on, 16
- competence concept, of Waddington, 90
- complexity, sciences of, 230
- complex structures, from cells, 239
- Comtean positivism, 20
- "Concept of the Organism", 7
- concrete symbol, 109
- Concrete Universal, 108  
Hegel on, 103
- condensation-process model, of limb development, 145, 146, 152

connections, nomic nature of, 51  
 consensus parsimony cladogram, 255  
 copper, 39  
 corn, distichous phyllotaxis in, 216  
 cornea, formation of, 239  
 correspondence, morphological, 18, 19, 66  
 cortical inheritance, morphogenetic fields and, 221–229  
 crab, 89  
*Crocus*, rotational symmetry in, 19, 42, 57–58, 70  
 crows, 74–75, 80  
 Crustacea, 49  
 crystallography, 39  
 Cummings, F. W., cell-sheet curvature model of, 245–246, 247, 256  
 curvature  
   Cummings' model of, 245–246, 247  
   types of, 245  
 Cuvier, G. L., 9, 14, 15, 241  
*Cygnus olor*, 67  
*Cymopolia van bossae*, lateral morphology in, 213  
 cytoplasm  
   calcium effects on, 200  
   segregated, 136  
 cytoskeleton(s)  
   of algae, 188  
   calcium effects on mechanical state of, 198–200  
   changes in, 182  
   role in epigenetic space, 180

## D

D'Arcy Thompson, 7, 16, 107, 113, 115, 215  
   on biological transformations, 116–120  
 Darwin, C. R., 11, 20–21, 57, 111, 116, 231  
   descent with modification of, 64  
   homology concept of, 48, 140, 152, 241  
   on vertebrate eye, 234–235  
 Darwinian phylogenists, 68, 124  
 Darwinian realism, Hull on, 31–36, 37

Darwinian theory, 54, 100, 124, 140, 146  
   empirical classification and, 13–25, 38, 44, 45  
   Mayr on, 29  
   of taxa, 26, 34, 67, 69, 70, 81  
 neo-Darwinian theory, 80–81, 250, 251  
 Darwinism, 25, 63, 67, 70, 85, 90, 101, 103, 125, 129, 130  
   critique of, 6–7, 117  
   D'Arcy Thompson's critique of, 117  
   Hull on, 6–7, 24, 36  
   Mayr on, 9, 17, 24, 27, 36  
   nominalism and, 25–27  
 Darwin–Mayr conception of species, 31  
*Dasycladales*, 194, 212, 249  
   cell wall dynamics in, 210  
   taxonomy among, 213–214  
   whorled laterals in, 220, 233  
*daughterless* gene, of *Drosophila*, 184  
 Dawkins, R., 132  
*deadpan* gene, of *Drosophila*, 184  
 de Beer, G. R.  
   on homology, 140–141, 241  
   on morphogenesis, 94  
 definitions, 57–61  
   intensional, 57  
   ostensive, 42–43  
   real, 60  
 deletions, in mutants, 172, 178–179  
 denticle bands, mirror-symmetrical, 172–173, 175  
 Descartes, René, 82, 83  
 descent with modification theory, 20  
 descriptions, 57–61  
 descriptivism, essentialism and, 52–57  
 designators, rigid, 53  
 determinant concept, of Weismann, 136  
 deuterium oxide, 55  
 developmental creode, 205  
 developmental hierarchies, 144–146  
 de Vries, H., on genetics, 84  
 diagnoses, 57  
*dicephalic* mutants, of *Drosophila*, 157–158, 163  
 digit loss, experimental studies of, 151  
 digit specification, 139–140

## Index

277

- directed mutations, 250–256
- discontinuity, philosophy of, 18
- disorganised* mutation, in *Tetrahymena*, 224
- distichous phyllotaxis, in plants, 216
- diversities, Driesch on, 8, 102
- DNA, 138, 256
- genetic programme encoded in, 132
  - sequences in chromosomes, 131
  - transformations and transpositions of, 250–251
- Driesch, H., 4, 7, 25, 105
- on “diversities”, 8
  - on empirical taxonomy, 7–9
  - experiments on cleavage patterns, 83–84
  - field concept of, 97
  - on form, 6, 7, 94–95, 129
  - philosophy of the organism, 97–98
  - on rational morphology, 8–9, 100
  - on rational systematics, 101–104, 109, 122, 123
  - on systematics and history, 30
  - transcendental idealism of, 10
  - on type, 15, 65
- Drosophila*
- double mutants of, 170–171
  - genetic network studies on, 186–187
  - mutations in, 88, 154–192, 222, 225.
  - See also* individual mutations
  - regeneration studies on, 188
  - segmentation in, 130, 154–160, 211–212, 234
  - segmentation mutants of, 154–167
  - sex determination in, 184, 186
  - symmetric structure of, 154
  - teratologies in, 252, 254
- Drosophila melanogaster*, 35, 85–86, 89
- mutations in, 88
- duck-leg mesoderm cells, limbs formed from, 138–139
- Dürer, A., 118
- E
- earthworm, intestinal segments of, 143
- ECM. *See* extracellular matrix (ECM)
- ectoderm, embryological transformation of, 50
- ectopic duplication, in annelid reproduction, 165
- egg, in heredity, 82–83
- eidōs*
- Aristotle’s concept of, 3, 5
  - as form and kind, 6
- electrical currents, role in growth and morphogenesis, 248
- electrons, 98
- electron–shell theory, 39
- embryology
- of eye, 2324–239
  - of *Triturus taeniatius*, 49–50
- empirical classification, Darwinian theory and, 13–25
- empirical taxonomies, 11
- empiricism, 92
- Cassirer’s critique of, 105
  - logical, 33
  - radical, 27–30
  - rational, 116–117
- engrailed* mutants, of *Drosophila*, 160–161, 165, 180, 182, 185
- entelechy concept, of Aristotle, 97, 100
- Entwicklungsmechanik*, 9, 70
- environment, effect on morphogenesis, 243, 256
- epigenesis, 153, 240
- generic properties of, 182–186
  - teratology and, 179–182
- epigenetic landscape, of Waddington, 89
- epigenetic maps, 154–192
- reading on four colour-wheels, 172–179, 182
- epigenetic space, 179–180
- epistemology, positivism in concept of, 6
- equivalence classes, 34
- homology as, 143–144
- Erlanger Programme, 107
- Eryops*, limb form of, 140
- essence(s), 16
- individual, 80–82
  - nominal, 25
  - real, 11, 25, 99, 100

- essentialism, 17–25  
 descriptivism and, 52–57  
 Hull on, 9  
 Mayr on, 9, 27
- ether, effects on *Drosophila* embryo, 180
- eve* mutant, of *Drosophila*, 167, 168, 169, 171, 172, 184, 190
- even-skipped* mutant, of *Drosophila*, 158, 160, 161, 168, 170, 172
- Eve protein stripe formation, in *Drosophila*, 167
- evocator for the stimulus, 241
- evolution, development and, 231–242
- Evolutionary Developmental Biology* (Hall), 241
- excitable media, 232
- exogastrulation, abnormality of, 236–237
- experimental practice, 49–52
- explanation  
 causal, 11  
 narrative, 7, 63–66
- extension, of species' name, 43–47, 46
- extracellular matrix (ECM),  
 condensation initiation in, 145
- eye, embryology of, 234–239
- eyeless* mutation, in *Drosophila*, 141
- F
- facet-forming cells, of *Drosophila* eye, 86
- Faraday, M., 229
- Fearful Symmetry* (Stewart and Golubitsky), 232
- feedback, metabolism analysis by, 4
- ferrofluid, use in phyllotaxis studies, 217
- Fibonacci series, in phyllotaxis, 218, 219, 220, 221
- fields  
 forms and, 127–256  
 genes, homology, and, 150  
 Goodwin on, 94, 98, 99  
 morphogenetic, 94–100  
 nature and theory of, 98  
 organisms and, 193–194  
 as “powerful particulars”, 97
- finite–element model, of *Acetabularia*  
 regenerating tip, 203
- fish fins, tetrapod–limb formation from, 152
- flagella, wavy and curly types, 133
- flagellin, reaggregation of, 133, 134
- floral symmetry, 19, 38
- flower petals, 143
- follistatin, role in *Xenopus* development, 185
- Foraminifera, 117
- form  
 Bateson on, 6, 9, 13  
 Cassirer on, 104–109, 110  
 causal origins of, 231  
 “dread” of, 4  
 Driesch on, 6, 7  
 Grene on, 3  
 science of, 9, 39  
 scientific theory of, 7
- forma accidentalis*, 6
- forma essentialis*, 6
- form–matter analysis, 4
- forms  
 as accidental, 68  
 fields and, 100, 127–256  
 field theory of, 100  
 Linnean systematisation of, 36, 37  
 serial, 109, 122
- Frankel, J., on pattern formation, 224
- Freud, S., 80
- Fritillaria meleagris*, 24, 35
- Fritillaria pontica*, 24
- Fritillaria pyrenaica*, 24
- frogs, alimentary canal formation in, 242
- fushi tarāzu* mutant, of *Drosophila*, 160, 161
- G
- Gaia hypothesis, 251
- Galanthus nivalis*, 59
- gap gene products, periodic distributions of, 174, 175–176, 177
- gastrulation, 235–236, 237
- Gellner, E., 113
- gelsolin, calcium effects on activity of, 199, 200

## Index

279

- genes  
 fields, homology, and, 150  
 organisms and, 85–90  
 products of, 182, 184–185  
 ratios of, 169–172, 178, 182, 184  
 role in limb production, 129  
 genealogical nexus, 47  
 gene pool, of neo-Darwinian theory, 81  
 generating relation, of Cassirer, 104  
 generative dynamics, environment role in, 248–250  
 generic concept, nature of, 103  
 generic forms, 130, 213  
 determination of, 180  
 evolution of, 243–250  
 taxonomy and, 212–215  
 genes, role in generative processes, 209–211  
 genetic form, 7  
 genetic information, 80, 83, 84, 90, 91, 99  
 genetic makeup, of organisms, 82, 84  
 genetic networks  
 as learning system, 187–188  
 models of, 186–188  
 morphogenesis and, 243–248, 251  
 genetic programme  
 encoded in DNA, 132  
 molecular reductionism and, 131–136  
 genetic reductionism, 129, 132  
 genetics, 81  
 genome, as essence of organism, 90  
*genos*, Aristotle's concept of, 3, 5  
 genotype  
 change effect on morphogenesis, 243  
 definition of, 179  
 germ plasm, 131, 137  
 somatoplasm compared to, 91  
*giant* mutant, of *Drosophila*, 162, 163, 176  
 Gifford lectures, 104  
 gnathostomes, fin structure in, 141  
 God, 82, 83  
 Goethe, J. W. von, 9, 15, 117, 118, 124, 241  
 phenomenology of form and, 110–116  
 gold, properties of, 11, 34, 56–57, 59, 60–61  
 Goldschmidt, R. B., 7  
 on genetics, 86, 87–88, 91  
 Goodwin, B. C., 123  
 on morphogenetic fields, 94, 98, 99, 100, 121, 123, 124  
 grasshopper, gene expression in, 185  
 Grene, M.  
 on Aristotle and modern biology, 1, 6  
 on form, 3–4, 113  
 group theory, 106, 107  
 Grétry's harmony, 83  
 Gurwitsch, A., 94  
 on morphogenesis, 94, 95  
 H  
 Hacking, I., 52, 98  
*hairy* mutant, of *Drosophila*, 167, 168, 169, 171, 172, 173–174, 175, 184, 185, 190  
*Halicoryne spicata*, phenocopies of, 213  
 Hall, B., 241  
 Harré, R., 29, 32, 52, 68, 73, 74, 75  
 on causes, 91, 92, 93, 229  
 on empirical classifications, 14  
 on essentialism, 14  
 on isotopes, 55–56  
 on natural kinds, 52–54, 55, 73–74, 114  
 on positivism, 6, 113  
 on ‘powerful particulars’, 97, 100  
 on properties, 76, 77

on “Twin Earth”, 54, 55

Weismann, A., 150, 152, 250

concept of organism, 80–81, 97, 129

determinant concept of, 136, 137,

138, 140

Weismannist paradigm, 82–85, 86, 90, 91

Weiss, P., 129

on fields, 95

whorled laterals, 220, 233

whorled phyllotaxis

in *Acetabularia*, 197, 198, 206, 210, 212, 215

in plants, 215

Wittgenstein, L., 43, 52

Wolpert, L.

on equivalence, 144

on fields, 98–99

on naming hypothesis, 148–149

positional information theory of, 136–138, 139, 152

Woodger, J. H., 7, 101, 118

on Bauplans, 16–17, 122

on comparative method, 16, 18–19

on concept of organism, 82, 83

on generalisations, 75

on gene theory, 84–85

on homology, 48–49
