Preface	xiii
Physical constants and conversion factors	xv
1 Introduction	1
1.1 Historical review	2
1.2 The scattering of particles by nuclei	3
1.2.1 Form factor	5
1.2.2 The scattering of electrons by nuclei	5
1.3 Nuclear spectra	7
1.4 Invariance and conservation laws	10
1.4.1 Charge symmetry and charge independence	11
1.4.2 Isospin and isospin multiplets	11
1.5 Questions	15
2 Nuclear models	17
2.1 The liquid drop model	17
2.1.1 The semi-empirical mass formula	18
2.1.2 The stability of nuclei	22
2.2 The shell model	26
2.2.1 Evidence for shell structure in nuclei	26
2.2.2 Independent-particle models	26
2.2.3 Fermi gas model	28
2.2.4 The single-particle shell model	29
2.2.5 The spin-orbit interaction and magic numbers	29
2.2.6 Ground state spin and parity	31
2.2.7 Magnetic dipole moment	32
2.2.8 Electric dipole moment	35
2.3 Deformed nuclei and nuclear electric quadrupole moments	37
2.3.1 The deformed shell model	40
2.3.2 The Nilsson model	43
2.3.3 Ground state quadrupole moment	45
2.4 Excited states of nuclei	47
2.4.1 Closed-shell nuclei	47
2.4.2 Core-excited states	48
2.4.3 Mid-shell nuclei	49
2.5 The collective model	50
2.5.1 Vibrational levels	51

viii **Contents**

2.5.2	Giant resonances	54
2.5.3	Rotational levels of even-even nuclei	57
2.5.4	The adiabatic approximation	59
2.5.5	The moment of inertia	60
2.5.6	The rotational wavefunction	61
2.5.7	Odd- A nuclei	61
2.5.8	β and γ bands	63
2.6	High-spin states	64
2.6.1	Backbending	64
2.6.2	Very high spin states	69
2.7	Summary	73
2.8	Questions	75
3	Beta decay	77
3.1	Introduction	77
3.1.1	The energetics of β -decay	77
3.2	The theory of beta decay	78
3.2.1	The range of an interaction	79
3.2.2	The form of the electromagnetic interaction	80
3.2.3	Fermi's theory of the weak interaction	82
3.3	Fermi and Gamow-Teller beta transitions	84
3.3.1	Allowed transitions	84
3.3.2	The shape of the β -spectrum	86
3.3.3	β -decay lifetimes and $f\tau$ values	88
3.3.4	Super-allowed β -decays	89
3.3.5	Forbidden β -decays	90
3.3.6	Electron capture	92
3.3.7	Muon capture	93
3.4	Parity violation in β -decay	93
3.4.1	Experimental evidence for parity violation	96
3.4.2	P and CP invariance	97
3.5	The neutrino	99
3.5.1	The helicity of the neutrino	99
3.5.2	The mass of the neutrino	101
3.5.3	Inverse β -decay and neutrino detection	105
3.5.4	Solar neutrinos	106
3.6	(V-A) theory	107
3.6.1	The conserved-vector current hypothesis	109
3.7	Summary	111
3.8	Questions	111

Table of Contents

[More information](#)**Contents ix**

4 Gamma decay	114
4.1 The theory of γ -decay	114
4.1.1 Spontaneous decay	114
4.1.2 Multipole fields	116
4.2 Transition rates	116
4.2.1 Single-particle estimates	116
4.2.2 Enhanced transition rates	119
4.2.3 Isospin selection rules	120
4.2.4 Analogue transitions	122
4.2.5 Experimental transition rates	122
4.2.6 Effective charges	128
4.3 Measurement of lifetimes	129
4.3.1 Resonance absorption	130
4.4 The Mossbauer effect	132
4.5 Internal conversion	135
4.5.1 $0 \rightarrow 0$ transitions	136
4.6 Angular correlations	137
4.7 Summary	138
4.8 Questions	138
5 Alpha decay, fission and thermonuclear fusion	140
5.1 Alpha decay	140
5.2 Fission	144
5.2.1 The liquid drop model of fission	144
5.2.2 The fission barrier	144
5.2.3 Asymmetric fission and fission isomers	146
5.2.4 Shell corrections to the liquid drop model	146
5.2.5 Fission isomeric rotational band	151
5.2.6 Neutron-induced fission	153
5.3 Nuclear power	155
5.4 Thermonuclear fusion	156
5.4.1 Fusion reactors	158
5.5 Summary	159
5.6 Questions	159
6 Nuclear reactions	161
6.1 Introduction	161
6.1.1 Accelerators	161
6.1.2 Kinematics and conservation laws	162
6.1.3 The centre of mass frame	163

Cambridge University Press

Table of Contents

[More information](#)x **Contents**

6.1.4	Particle identification	164
6.1.5	Cross-sections	165
6.2	General features of nuclear reactions	167
6.2.1	Isospin in nuclear reactions	170
6.2.2	Detailed balance	171
6.2.3	Excitation functions	172
6.3	Elastic scattering	173
6.3.1	Rutherford scattering	173
6.3.2	Elastic scattering at energies above the Coulomb barrier	175
6.3.3	Optical model for elastic scattering	176
6.4	Inelastic scattering	180
6.4.1	The collective model and inelastic scattering	181
6.4.2	Coulomb excitation	183
6.5	Compound nucleus reactions	185
6.5.1	A partial wave description of a reaction	187
6.5.2	Limiting cross-sections	189
6.5.3	Slow neutron-induced resonances	189
6.5.4	The neutron level width Γ_n	194
6.5.5	Isobaric analogue resonances	196
6.5.6	Isospin-forbidden reactions	199
6.5.7	Compound nucleus reaction cross-sections	201
6.6	Direct reactions	203
6.6.1	Direct reactions with heavy ions	205
6.6.2	Kinematic factors in heavy-ion reactions	206
6.7	Deep-inelastic reactions	210
6.8	Fusion reactions and superheavy elements	212
6.9	Summary	213
6.10	Questions	214
7	The nuclear force	216
7.1	Low-energy nucleon-nucleon scattering	216
7.1.1	Partial wave treatment of nucleon-nucleon scattering	216
7.1.2	Scattering length and effective range	217
7.1.3	Low-energy neutron-proton scattering	219
7.1.4	Refractive index for slow neutrons	220
7.1.5	Slow neutron scattering off ortho- and para-hydrogen	222
7.1.6	Low-energy proton-proton and neutron-neutron scattering	222

Table of Contents

[More information](#)

	Contents	xi
7.2 The deuteron	224	
7.3 High-energy nucleon-nucleon scattering	225	
7.4 Exchange forces	226	
7.4.1 Meson exchange	230	
7.5 The nuclear force within nuclei	231	
7.5.1 Saturation of the nuclear force	232	
7.5.2 The average nuclear potential well	233	
7.5.3 Why independent-particle motion?	236	
7.5.4 The residual interaction between nucleons	237	
7.6 Summary	238	
7.7 Questions	239	
8 Deformed nuclei and collective motion	240	
8.1 The ground-state deformation of nuclei	240	
8.2 The collective model	243	
8.2.1 Symmetries of the wavefunction for a deformed nucleus	243	
8.2.2 $K = \frac{1}{2}$ bands	244	
8.3 Variational approach to collective motion	245	
8.4 The cranking model for the moment of inertia	250	
8.4.1 The cranked Nilsson model	253	
8.5 The pairing interaction	254	
8.5.1 The energy gap	254	
8.6 Shell model description of collective states	256	
8.6.1 The cluster model	257	
8.6.2 Vibrational states and the schematic model	258	
8.7 Summary	262	
8.8 Questions	263	
Appendix Rotations	265	
Answers to selected questions	268	
Bibliography	269	
Index	271
