<i>List of illustrations</i>	viii
<i>Preface</i>	xiii
<i>Acknowledgments</i>	xv
1. Darwin and the descent of “man”	1
Evolution as an origin myth	1
Reopening the question: “human nature” from an evolutionary perspective	7
Human evolution includes men, women, and children	9
What this book is all about	10
2. Models in evolution	15
The data: the necessity of an interdisciplinary approach	15
The importance of an explicit, process-oriented model	17
Primate models in human evolution: problems with the baboon model	19
Why a new model is needed: early human social life – science and myth	22
3. African apes and human evolution	29
Apes and humans: an anatomical and behavioral perspective	29
Ape social behavior and intelligence	31
African apes and human evolution: the story molecules tell about genetic affinity	34
Ape evolutionary history	43
Molecular clocks and fossil “apes”: is the discrepancy more apparent than real?	54
Summary and conclusions	58
4. Chimpanzees as a model of the ancestral population:	
locomotion, tools, and diet	65
Locomotion: jack-of-all-trades	67
Tool use by a small-brained primate	69
Chimpanzees: incipient omnivores	75

vi *Contents*

5. Chimpanzees as a model of the ancestral population:	
social organization and interaction	83
Environment and social structural flexibility	84
Sociability	87
Genealogical ties and maternal “investment”	89
Sexual interactions	93
“Rank” and “leadership”	98
How aggressive are chimpanzees?	99
How much variability by sex?	103
Summary: social interactions	106
6. Chimpanzees as a model of the ancestral population:	
mental capacities, communication, and sociation –	
bases for the evolution of the capacity for culture	109
Chimpanzee communication and cognition	110
Communication and the environment	114
Mental capacities: on the interpretation of laboratory	
studies	115
Viewing communication as an evolving behavioral system:	
cognition and emotion	127
Implications of chimpanzee behavior for reconstructing	
hominid origins: a basis for the evolution of the capacity	
for culture as the human adaptation	130
7. The transition to <i>Australopithecus</i> : natural and sexual	
selection in human origins	133
The eastern African savanna: an available niche	134
Gathering as the critical innovation	139
Protein sources	145
Patterns of social interaction	147
Communication, mental activity, and the brain as the	
integrating structure	155
Selection and the origin of the hominid line: the role of	
females in speciation	158
8. Evidence on the transition: what can the earliest	
hominid fossils reveal about the ancestral population	
and the transition?	169
Are there transitional fossils?	169
Footprints at Laetoli: bipedalism – the mark of hominid	
status	173
Dental remains at Laetoli and Afar (Hadar): clues to a	
pongid ancestry and the new hominid adaptation	178
Evidence for pongid ancestors and the gathering hypothesis	
from ape and human saliva: evolutionary and dietary	
aspects of salivary proteins in primates	187

	<i>Contents</i>	vii
Models and data: a remarkable fit		190
9. Gathering and the australopithecine way of life		191
Anatomy and the australopithecine adaptation		197
Inferences on life processes		208
Stone tools and animal bones: evidence on food getting?		210
Predation and defense		217
What were early hominid communities like?		219
Summary: the generic adaptation		222
10. Early hominid lifeways: the critical role of an interpretive framework		225
Sites and dates: an approach to sorting out patterns of variation		227
Evolutionary processes: the gathering hypothesis and the question of speciation among early hominids		254
11. Conclusion: becoming human		263
What kind of ancestor?		264
The nature of the transition		267
Early hominid "experiments": the lifeway that worked		274
<i>Bibliography</i>		278
<i>Acknowledgments and bibliography for illustrations</i>		335
<i>Name index</i>		361
<i>Subject index</i>		366
