<i>Preface</i>	ix
1 The lichen environment: temperature	1
1.1 Surface energy balance	1
1.2 Examples of boundary layer thallus temperatures	5
1.3 The importance of boundary layer temperatures and energy balances in the recovery succession of lichen woodland following fire	9
1.4 Winter thallus temperatures	16
1.5 Lichen colour and morphology, and their interaction with thallus temperature	18
1.6 The thermal environment of the tree canopy	24
1.7 Evaporative cooling in the boundary layer	27
1.8 The concept of the thermal operating environment	29
2 The lichen environment: moisture	30
2.1 Liquid water absorption	30
2.2 Water vapour absorption	34
2.3 Water loss: general comments	41
2.4 Physical aspects of evaporation	42
2.5 Morphological control of evaporation	45
2.6 Topographical control of evaporation	50
2.7 Lichen canopy microclimate	53
3 The lichen environment: ionic criteria	60
3.1 The elemental content in lichens and its location and form	61
3.2 Mechanisms of uptake and release of cations	63
3.3 Anion uptake in lichens	71
3.4 The special case of sulphite uptake in relation to atmospheric pollution	74
3.5 The mineral ionic environment in the field	90
4 Nitrogen fixation in lichens	102
4.1 The interaction between nitrogenase activity and thallus hydration	104
4.2 The interaction between nitrogenase activity and temperature	111
4.3 The interaction between nitrogenase activity and light	118

viii	<i>Contents</i>	
4.4	The seasonal dependency of the basic level of nitrogenase activity	124
4.5	The interaction between nitrogenase activity and snow cover	126
4.6	Nitrogenase activity in the field and the potential for nitrogen input into the ecosystem	132
4.7	The fate of fixed nitrogen in the lichen thallus	136
5	Photosynthesis in lichens: its measurement and interaction with thallus hydration	141
5.1	The measurement of gas exchange	142
5.2	Variation between replicate thalli, and data presentation	145
5.3	Storage and pretreatment of experimental material	149
5.4	The interaction of net photosynthetic rates and the level of thallus hydration	151
5.5	Extreme levels of thallus hydration as an environmental stress	163
5.6	The requirement for alternate wetting and drying periods	164
6	The interaction between net photosynthesis, light and temperature	172
6.1	Seasonal photosynthetic capacity changes in lichens: the response matrix approach	173
6.2	The interaction between photosynthesis and illumination in algae	178
6.3	Comparable events in lichens	186
6.4	The induction of seasonal photosynthetic capacity changes	193
7	Net photosynthetic optima and thermal limits	206
7.1	The potential fallacy in contrasting photosynthetic temperature optima in arctic and tropical lichens	206
7.2	The lichen response to high-temperature stress	210
7.3	The lichen response to low-temperature stress	223
8	Respiration and growth	227
8.1	Resaturation respiration	228
8.2	Respiration and thallus hydration	233
8.3	The interaction between respiration, thallus age and temperature	237
8.4	Seasonal respiratory changes	238
8.5	Growth	240
9	Phenotypic plasticity and differential strategies	246
9.1	Phenotypic plasticity in the net photosynthetic - thallus hydration response	247
9.2	Phenotypic plasticity of photosynthetic capacity	251
9.3	Differential strategies: a tentative scheme	256
9.4	Differential photosynthetic strategies	260
