Contents

Preface	page xi
1 Terminology, definitions, methods of mechanistic study	
1.1 <i>Introduction</i>	1
1.2 <i>Energy diagrams</i>	2
1.3 <i>Intermediates</i>	5
1.4 <i>Methods of mechanistic study</i>	6
1.5 <i>Kinetic methods</i>	7
1.6 <i>Environmental influences; solvent effects</i>	8
1.7 <i>Catalysts</i>	9
1.8 <i>Acidity-functions</i>	10
1.9 <i>Isotope effects</i>	10
1.10 <i>Structural effects</i>	11
1.11 <i>Linear free-energy relationships</i>	12
1.12 <i>Stereochemical influences; steric effects</i>	13
1.13 <i>Effects of temperature</i>	14
1.14 <i>Thermodynamic and kinetic factors as determinants of rates and products</i>	15
1.15 <i>Classification of mechanisms</i>	16
1.16 <i>Additions, substitutions, replacements, displacements and halogenations</i>	17
1.17 <i>Symbolism</i>	18
2 The bonding and non-bonding properties of the halogens	
2.1 <i>Introduction</i>	19
2.2 <i>The elements and derived diatomic molecules</i>	22
2.3 <i>Mixed halogens</i>	23
2.4 <i>Charge-transfer complexes of the diatomic molecules</i>	24
2.5 <i>Polyhalide ions</i>	25

vi	Contents
2.6	<i>The halide anions: covalent halides as sources of nucleophilic halogen</i> 28
2.7	<i>Cationic halogen species</i> 31
2.8	<i>Covalent halides as sources of electrophilic halogen</i> 34
2.8.1	<i>Introduction</i> 34
2.8.2	<i>Halogen–oxygen and halogen–sulphur bonds</i> 35
2.8.3	<i>Halogen–nitrogen bonds</i> 35
2.8.4	<i>Halogen–carbon bonds</i> 36
2.8.5	<i>General considerations</i> 36
2.9	<i>Steric and electronic effects of halogen substituents</i> 38
2.9.1	<i>Steric effects</i> 38
2.9.2	<i>Inductive and conjugative effects</i> 38
2.10	<i>Pseudo-halogens</i> 41
3	The general patterns of reactions of electrophiles with unsaturated compounds
3.1	<i>Introduction</i> 42
3.2	<i>Reagents and substrates</i> 42
3.3	<i>One-stage additions</i> 43
3.4	<i>One-stage substitutions</i> 45
3.5	<i>Two-stage reactions</i> 47
3.5.1	<i>General considerations</i> 47
3.5.2	<i>Kinetics and products</i> 48
3.5.3	<i>Orientation</i> 48
3.5.4	<i>Reactions of the intermediate: combination with a nucleophile</i> 49
3.5.5	<i>Reactions of the intermediate: proton loss, or loss of another electrophile</i> 50
3.5.6	<i>Reactions of the intermediate: rearrangement by group migration</i> 50
3.5.7	<i>Other reactions of intermediates or products</i> 51
3.5.8	<i>Reversibility of reaction paths</i> 52
3.5.9	<i>Intermediates isomeric with the reactants: molecular complexes, σ-complexes and ion-pairs</i> 53
3.6	<i>Generalised pattern of reactions between electrophilic reagents and unsaturated compounds</i> 53
4	Fluorine and its compounds as electrophiles
4.1	<i>Reactions of molecular fluorine</i> 55
4.2	<i>Electrophilic fluorination with fluoroxy-compounds</i> 58
4.3	<i>Xenon difluoride as a fluorinating agent</i> 60
4.4	<i>Fluorination by metallic ions</i> 62

Table of Contents

[More information](#)

<i>Contents</i>	vii
4.5 <i>Perchloryl fluoride</i>	63
5 Reactions of molecular chlorine with unsaturated compounds	
5.1 <i>Introduction</i>	64
5.2 <i>Kinetic forms: composition and nature of the transition state</i>	65
5.3 <i>Effects of structure on reactivity</i>	66
5.4 <i>Product-forming sequences: replacement at the attacked centre</i>	70
5.4.1 <i>Substitution in olefinic compounds</i>	70
5.4.2 <i>Substitution in aromatic compounds</i>	71
5.4.3 <i>Comparison of effects of substituents on ortho- and para-positions</i>	71
5.4.4 <i>Replacement of groups other than hydrogen</i>	72
5.5 <i>Product-forming sequences: replacement with rearrangement</i>	73
5.6 <i>Product-forming sequences: addition to form dichlorides</i>	74
5.6.1 <i>anti-Addition; addition to alkyl-substituted ethylenes, to deactivated olefinic systems, and to simple cycloalkenes</i>	74
5.6.2 <i>syn-Addition; addition to aryl-substituted cyclic systems, including aromatic compounds</i>	75
5.6.3 <i>syn-Addition; addition to aryl-substituted acyclic systems</i>	77
5.6.4 <i>syn-Addition; competition for the carbocationic centre by other neighbouring groups</i>	78
5.6.5 <i>syn-Addition determined by solvent interactions</i>	78
5.7 <i>Product-forming sequences: addition with accompanying incorporation of nucleophiles</i>	79
5.7.1 <i>Attack by an external nucleophile</i>	79
5.7.2 <i>Attack by an internal nucleophile</i>	80
5.7.3 <i>Orientation; Markownikoff and anti-Markownikoff addition</i>	80
5.8 <i>Product-forming sequences: addition with double-bond rearrangement</i>	82
5.9 <i>Product-forming sequences: reactions through rearranged carbocationic intermediates</i>	86
5.10 <i>Product-forming sequences: further reactions of the primary products</i>	87
5.11 <i>Product-forming sequences: addition-elimination pathways</i>	91
5.12 <i>Acetylenes and allenes</i>	92
5.13 <i>Summary</i>	94

viii	<i>Contents</i>
6 Chlorinations by chlorinating species other than molecular chlorine	
6.1 <i>Introduction</i>	96
6.2 <i>Compounds having chlorine–halogen bonds</i>	97
6.2.1 <i>Chlorine fluoride</i>	97
6.2.2 <i>Benzene iododichloride</i>	97
6.2.3 <i>Iodine trichloride</i>	99
6.3 <i>Neutral species having chlorine–oxygen or chlorine–sulphur bonds</i>	100
6.3.1 <i>Introduction</i>	100
6.3.2 <i>Hypochlorous acid</i>	100
6.3.3 <i>Chlorine acetate</i>	101
6.3.4 <i>t-Butyl hypochlorite</i>	104
6.3.5 <i>Sulphuryl chloride</i>	106
6.4 <i>Protonated species having chlorine–oxygen bonds</i>	107
6.4.1 <i>Introduction</i>	107
6.4.2 <i>Acid-catalysed chlorinations by hypochlorous acid; kinetic forms and structural effects</i>	107
6.4.3 <i>Orientation of addition to olefinic substances; the accompanying rearrangements, and substitutions accompanying addition, in the reactions of hypochlorous acid and acidified hypochlorous acid in aqueous solution</i>	110
6.4.4 <i>Acid-catalysed reactions of chlorine acetate and of t-butyl hypochlorite</i>	115
6.4.5 <i>Chlorinations in sulphuric acid</i>	116
6.5 <i>Species having chlorine–nitrogen bonds</i>	117
6.6 <i>Chlorination by metallic halides</i>	120
6.6.1 <i>Sequences initiated by electrophilic metallation</i>	120
6.6.2 <i>Heterolysis of chlorine–nucleophile bonds catalysed by Lewis acids</i>	120
6.6.3 <i>Chlorinations initiated by metal-containing electrophiles</i>	121
7 The bromination of unsaturated compounds	
7.1 <i>Introduction</i>	124
7.2 <i>Reactions involving ‘positive bromine’</i>	125
7.3 <i>Kinetic forms, and structural effects, for reactions with molecular bromine</i>	126
7.3.1 <i>Reactions following second-order kinetics</i>	126

Cambridge University Press

Contents	ix
7.3.2 <i>Reactions following kinetics of order greater than one in bromine</i>	131
7.3.3 <i>Bromide-catalysed brominations</i>	132
7.3.4 <i>Bromination by the tribromide ion</i>	133
7.3.5 <i>Acid-catalysed brominations</i>	134
7.3.6 <i>Primary kinetic isotope effects, and reversibility, in bromine substitutions</i>	135
7.3.7 <i>Temperature coefficients for bromination</i>	138
7.4 <i>The intermediates in reactions initiated by electrophilic bromine</i>	138
7.4.1 <i>Introduction</i>	138
7.4.2 <i>Isomeric molecular complexes involving molecular bromine</i>	139
7.4.3 <i>Isomeric σ-complexes involving molecular bromine</i>	139
7.4.4 <i>Ion-pairs as intermediates in electrophilic brominations; and a note on brominations in aprotic solvents</i>	140
7.4.5 <i>Carbocationic intermediates formed in electrophilic brominations</i>	143
7.4.6 <i>Competition for the carbocationic centre</i>	147
7.4.7 <i>Rearrangements of the carbocationic intermediate</i>	148
7.5 <i>Reactions initiated by brominating species other than molecular bromine</i>	149
7.5.1 <i>Bromine fluoride and bromine chloride</i>	149
7.5.2 <i>Compounds containing bromine–oxygen bonds</i>	150
7.5.3 <i>Compounds containing bromine–nitrogen bonds</i>	151
7.5.4 <i>Compounds containing bromine–carbon bonds</i>	153
7.5.5 <i>Metal halides and related compounds as reagents or catalysts for bromination</i>	153
7.6 <i>Secondary product-determining pathways in bromination</i>	154
8 <i>The iodination of unsaturated compounds</i>	
8.1 <i>Introduction</i>	159
8.2 <i>Iodination by molecular iodine, and by iodine chloride</i>	161
8.3 <i>Iodine carboxylates</i>	166
8.4 <i>Reagents having iodine–nitrogen bonds</i>	168
8.5 <i>Kinetic participation of the nucleophile by attack on the carbocationic centre; mechanisms of the ‘Ad3’ type</i>	169
8.5.1 <i>Iodination of acetylenic compounds</i>	169
8.5.2 <i>Intramolecular kinetic participation by nucleophilic neighbouring groups</i>	171

[More information](#)

x	Contents
	8.5.3 <i>Iodine fluoride and iodine azide as reagents for addition</i> 172
	8.6 <i>Iodination in strongly acidic conditions</i> 174
	8.7 <i>Iodination in the ortho-position</i> 175
9	Miscellaneous electrophilic halogenations, particularly of compounds containing 'active hydrogen'
	9.1 <i>Introduction</i> 177
	9.2 <i>Kinetic forms for the acid-catalysed halogenation of ketones in hydroxylic solvents</i> 180
	9.3 <i>Structural influences in the acid-catalysed halogenation of ketones</i> 184
	9.4 <i>Acid-catalysed halogenation of aldehydes</i> 188
	9.5 <i>Acid-catalysed halogenation of carboxylic acids and their esters; of acid halides, and of acid anhydrides</i> 190
	9.6 <i>Acid-catalysed halogenation of aliphatic nitro-compounds</i> 192
	9.7 <i>Base-catalysed halogenations</i> 192
10	Electrophilic halogenation of some aromatic heterocyclic systems
	10.1 <i>Introduction</i> 195
	10.2 <i>Activated aromatic heterocyclic compounds</i> 196
	10.2.1 <i>Pyrrole, furan, thiophene and their derivatives</i> 196
	10.2.2 <i>Benzo-derivatives of pyrrole, furan and thiophene</i> 199
	10.2.3 <i>Dibenzo-derivatives of pyrrole, furan and thiophene</i> 201
	10.2.4 <i>Imidazole, pyrazole, thiazole and related compounds</i> 202
	10.3 <i>Deactivated aromatic heterocyclic compounds</i> 204
	10.3.1 <i>General and theoretical considerations</i> 204
	10.3.2 <i>Halogenations with sources of 'positive halogen' under strongly acidic conditions</i> 206
	10.3.3 <i>Halogenations involving addition-elimination sequences</i> 209
	10.3.4 <i>Halogenations with rearrangement</i> 212
