## Themes in the Social Sciences

*Editors: Jack Goody & Geoffrey Hawthorn*

The aim of this series is to publish books which will focus on topics of general and interdisciplinary interest in the social sciences. They will be concerned with non-European cultures and with developing countries, as well as with industrial societies. The emphasis will be on comparative sociology and, initially, on sociological, anthropological and demographic topics. These books are intended for undergraduate teaching, but not as basic introductions to the subjects they cover. Authors have been asked to write on central aspects of current interest which have a wide appeal to teachers and research students, as well as to undergraduates.

*First books in the series*

Edmund Leach: *Culture and Communication: the logic by which symbols are connected*

*An introduction to the use of structuralist analysis in social anthropology*

Anthony Heath: *Rational Choice and Social Exchange*

*A critique of exchange theory*

Cambridge University Press
