Preface	<i>page</i>	ix
1 Introduction to kinetics		1
1.1 <i>Introduction</i>		1
1.2 <i>Reaction rates</i>		1
1.3 <i>Analysis of kinetic results</i>		4
1.3.1 <i>Differential method</i>		5
1.3.2 <i>Integration method</i>		6
1.4 <i>Equilibrium and consecutive reactions</i>		11
1.5 <i>The effect of temperature on reaction rates</i>		14
1.5.1 <i>The collision theory of reactions</i>		16
1.5.2 <i>Transition state theory</i>		18
2 Simple enzyme-catalysed reactions		23
2.1 <i>The concept of an enzyme–substrate complex</i>		23
2.2 <i>Single-intermediate mechanism</i>		26
2.3 <i>Double-intermediate mechanism</i>		35
2.4 <i>Comparison of enzyme parameters</i>		42
2.5 <i>Steady-state kinetics in the presence of added nucleophiles</i>		43
3 Enzyme inhibition		48
3.1 <i>Introduction</i>		48
3.2 <i>Types of inhibition</i>		48
3.2.1 <i>Competitive inhibition</i>		49
3.2.2 <i>Non-competitive inhibition</i>		58
3.2.3 <i>Uncompetitive inhibition</i>		63
3.2.4 <i>Mixed inhibition</i>		65
3.3 <i>Reversibility and product inhibition</i>		69
3.4 <i>Integrated rate equations</i>		73
3.5 <i>Summary</i>		79
4 The effect of pH on the rate of enzyme-catalysed reactions		83
4.1 <i>Qualitative considerations</i>		83
4.2 <i>Derivation of pH-dependent rate equations</i>		85

vi	<i>Contents</i>
4.2.1	<i>Ionisation of the free enzyme</i> 85
4.2.2	<i>Ionisation of the enzyme–substrate complex</i> 88
4.2.3	<i>Ionisation of both the free enzyme and ES complex</i> 91
4.3	<i>Ionisation of the substrate</i> 94
5	The effect of temperature on enzyme-catalysed reactions 97
5.1	<i>Introduction</i> 97
5.2	<i>Thermal denaturation of enzymes</i> 104
5.3	<i>Summary</i> 105
6	Multi-substrate enzyme systems 107
6.1	<i>Introduction</i> 107
6.2	<i>Types of reaction sequences</i> 107
6.2.1	<i>Ordered Uni Bi mechanism</i> 109
6.2.2	<i>Bi Uni mechanism</i> 115
6.2.3	<i>Ordered Bi Bi mechanism</i> 118
6.2.4	<i>Theorell–Chance mechanism</i> 122
6.2.5	<i>Random mechanisms</i> 125
6.2.6	<i>Non-sequential Ping Pong Bi Bi mechanism</i> 127
6.3	<i>Summary</i> 131
7	Fast reactions 135
7.1	<i>Introduction</i> 135
7.2	<i>Experimental methods</i> 136
7.2.1	<i>Rapid flow techniques</i> 136
7.2.2	<i>Relaxation methods</i> 140
7.2.3	<i>Flash-induced reactions</i> 144
7.3	<i>Development of kinetic equations</i> 146
7.3.1	<i>Pre-steady-state kinetics: high substrate concentration</i> 146
7.3.2	<i>Pre-steady-state kinetics: high enzyme concentration</i> 155
7.3.3	<i>The kinetics of relaxation processes</i> 157
7.3.4	<i>Analysis of relaxation data</i> 163
7.4	<i>Determination of the operational molarity of enzyme solutions</i> 164
8	Regulatory enzymes and their kinetic behaviour 168
8.1	<i>Regulatory processes</i> 168
8.2	<i>The behaviour of regulatory enzymes and other allosteric proteins</i> 174
8.2.1	<i>The Monod, Wyman &amp; Changeux model</i> 183

<i>Contents</i>	vii
8.2.2 <i>Koshland's induced fit model</i>	192
8.2.3 <i>Polymerising systems</i>	200
8.2.4 <i>Active site competitive binding model</i>	208
8.3 <i>Kinetics of regulatory enzymes</i>	212
9 <i>Coupled enzyme systems</i>	228
9.1 <i>Steady-state behaviour</i>	228
9.2 <i>Pre-steady-state and transient behaviour of coupled enzyme systems</i>	239
9.3 <i>Oscillatory behaviour</i>	246
10 <i>Computer simulation of biochemical systems</i>	254
10.1 <i>Introduction</i>	254
10.2 <i>Computer simulation using analogue computers</i>	255
10.3 <i>Programming the analogue computer</i>	259
10.3.1 <i>Examples of first order equations</i>	259
10.3.2 <i>Second order equations</i>	261
10.3.3 <i>Non-linear equations</i>	262
10.4 <i>Amplitude and time scaling</i>	266
10.5 <i>Computer simulation using digital computers</i>	269
10.6 <i>Numerical integration methods</i>	270
10.6.1 <i>One-step methods</i>	272
10.6.2 <i>Multi-step methods</i>	275
10.7 <i>Summary</i>	277
Appendix I <i>Theory and use of the Laplace–Carson operator method</i>	279
I.1 <i>Theory</i>	279
I.2 <i>Use of the Laplace–Carson procedure</i>	281
Appendix II <i>The computation of enzyme parameters by curve fitting procedures</i>	285
II.1 <i>Introduction</i>	285
II.2 <i>Statistical analysis: least squares methods</i>	287
II.2.1 <i>Unweighted linear least squares analysis</i>	289
II.2.2 <i>Weighted least squares linear regression analysis</i>	292
II.2.3 <i>Non-linear least squares regression</i>	295
II.3 <i>Computer programs for enzyme kinetics</i>	299
Appendix III <i>Analogue computer units</i>	307
III.1 <i>Introduction</i>	307
III.2 <i>Inverter</i>	307

viii	<i>Contents</i>
III.3 <i>Summer</i>	308
III.4 <i>Integrator</i>	309
III.5 <i>Multiplier</i>	311
<b>Bibliography</b>	313
<b>Index</b>	321
