Johnson, Richard E. 1949–
Juvenile delinquency and its origins

(The Arnold and Caroline Rose monograph series
of the American Sociological Association)

Bibliography: p.

1. Juvenile delinquency. 2. Criminal behavior, Prediction of.

I. Title. II. Series: The Arnold and Caroline Rose
monograph series in sociology.

	Measures of parental influences	76
	Measures of the role of the school	81
	Measures of strain	82
	Measures of peer influences	85
	Measures of deterrence	87
	Measures of delinquency	87
5	Analyzing the results	96
	Social class	99
	Love/concern of parent for child	100
	Success of performance in school	101
	Attachment to parents	103
	Future-oriented perceived strain	105
	Attachment to school	108
	Susceptibility to peer influence	109
	Delinquent associates	111
	Delinquent values	111
	Perceived risk of apprehension for delinquency	112
	Delinquent behavior	113
	The relative importance of the variables	115
	The problem of causal ordering	120
6	Findings across subsamples	123
	Causes for males and for females	123
	Origins of specific offenses	130
	The effects of being labeled	133
	The special case of the slums	135
7	Origins of juvenile delinquency: a final statement	138
	Appendix: The measuring devices	143
	Notes	163
	References	168
	Index	178

Figures

3.1	The basic attachment model	<i>page</i> 48
3.2	The sequential attachment model	49
3.3	The model including determinants of attachments	51
3.4	All possible effects in a portion of the causal model	53
3.5	A model of the role of strain	54
3.6	The model with social class and strain	55
3.7	A strict control approach	60
3.8	The model with delinquent associates and delinquent values	61
3.9	The model with perceived risk of apprehension	63
3.10	The complete theoretical model	67
5.1	The complete testable model	96
5.2	Results for the total sample ($N = 549$), including all paths with coefficients significant beyond $p < .01$, employing the following measures: underclass vs. earning class (X_1), occupational expectations (X_5), combined frequency (X_{11})	99
5.3	Results for the total sample ($N = 676$) with the effects of the “total parent-child connection” in a simplified model, including all paths with coefficients significant beyond $p < .01$	104
5.4	Results for the total sample ($N = 616$), including all paths with coefficients significant beyond $p < .01$, employing the following measures: underclass vs. earning class (X_1), occupational discrepancy (X_5), combined frequency (X_{11})	106
5.5	Results for the total sample ($N = 549$), including all paths with coefficients significant beyond $p < .01$, employing the following measures: underclass vs. earning class (X_1), occupational expectations (X_5), combined seriousness (X_{11})	113
5.6	Results for the total sample ($N = 549$), including all paths with coefficients significant beyond $p < .01$, employing the following measures: underclass vs. earning class (X_1), occupational expectations (X_5), combined frequency (X_{11}). Delinquent associates are omitted from the model.	119
5.7	Results for the total sample ($N = 549$), including all paths with coefficients significant beyond $p < .01$, employing the following measures: underclass vs. earning class (X_1), occupational expectations (X_5), combined frequency (X_{11}). The causal ordering between delinquent associates and delinquent values is reversed.	122

|-----|--|-----|
| 6.1 | Results for white males ($N = 207$), including all paths with coefficients significant beyond $p < .05$, employing the following measures: underclass vs. earning class (X_1), occupational expectations (X_5), combined frequency (X_{11}) | 125 |
| 6.2 | Results for white females ($N = 178$), including all paths with coefficients significant beyond $p < .05$, employing the following measures: underclass vs. earning class (X_1), occupational expectations (X_5), combined frequency (X_{11}) | 125 |
| 7.1 | The empirically supported model | 140 |

Tables

4.1	Percentage underclass by race	page 72
4.2	Distribution of present sample and Hirschi's sample by father's occupation	74
4.3	Loadings on obliquely rotated factors of father-related items	78
4.4	Loadings on obliquely rotated factors of mother-related items	79
4.5	Loadings on obliquely rotated factors of school-related items	82
4.6	Loadings on obliquely rotated factors of peer-related items	86
4.7	Loadings on obliquely rotated factors of delinquency-related items	88
4.8	Distribution of scores along the frequency-of-delinquency index	92
4.9	Inter-index correlations (Pearson's r) between various indexes of delinquent behavior	94
5.1	Rank order of the total causal effects of variables X_1 through X_{10} on delinquent behavior (X_{11}) from Figure 5.2, standardized coefficients	117
6.1	Total <i>unstandardized</i> effects of the causal variables on combined frequency of delinquent behavior for white males ($N = 207$) versus white females ($N = 178$), including all effects significant beyond $p < .05$	126
6.2	Rank orderings of the causal variables according to their total standardized effects on combined frequency of delinquent behavior, for white males ($N = 207$) and for white females ($N = 178$), including all effects significant beyond $p < .05$	127
6.3	Total <i>unstandardized</i> effects of the causal variables on combined frequency of delinquent behavior for Asian males ($N = 46$) versus Asian females ($N = 47$), including all effects significant beyond $p < .20$	128
6.4	Rank orderings of the causal variables according to their total standardized effects on combined frequency of delinquent behavior, for Asian males ($N = 46$) and for Asian females ($N = 47$), including all effects significant beyond $p < .20$	129
6.5	Rank orderings of the total standardized effects of the causal variables on theft, vandalism, and assault for white females ($N = 209$), including all effects significant beyond $p < .05$	131
6.6	Rank orderings of the total standardized effects of the causal variables on theft, vandalism, and assault for white females ($N = 179$), including all effects significant beyond $p < .05$	132
