*Preface xi Introduction 1*

### **PART ONE: GENERAL CONCEPTS OF AQUATIC ECOLOGY**

<b>1 Aquatic ecosystems and management</b>	<b>5</b>
Ecosystem composition and energy sources	6
Energy flow and nutrient cycling	7
Efficiency of energy and nutrient use	9
Management of ecosystems	11
<b>2 Standing crop and productivity</b>	<b>13</b>
Pyramid of biomass	13
Pyramid of nomenclature	14
Efficiency of transfer	14
<b>3 Hydrographic characteristics</b>	<b>16</b>
Types of flow	16
Regimes of flow	18
Boundary layers	18
Density effects	20
Density currents	21
Temperature properties of lakes	22
A typical midlatitude lake	24
Classification of lakes according to temperature regimes	28
Water movements	28
Surface waves	30
Wind-driven currents	31
Seiches	32
Tidal effects	34
Water movements in large lakes	34
Kelvin waves	35
Thermal bar	35
	vii

*viii*    *Contents*

Dispersal processes	37
Large-scale phenomena and conditions in large lakes	39
Study questions	43
<b>4 Population growth</b>	<b>48</b>
Unlimited environment	48
Limited environment	48
Unicellular vs. multicellular organism growth	49
Microorganism growth and environment	50
Steady-state system	51
Non-steady-state system	52
Use of a steady-state concept	54
Study questions	55
<b>5 Limitation, tolerance, and adaptation</b>	<b>57</b>
Limitation	57
Adaptation	61
<b>6 Nutrient cycles</b>	<b>63</b>
Phosphorus	63
Reactions at the mud-water interface	65
Combined chemical and biological processes that establish P equilibrium	70
Fate of added P to lakes	73
Modeling P exchanges	73
Sediment as sink or source	75
Nitrogen cycle	76
Sulfur cycle	81
Carbon cycle	83
Study questions	86
<b>PART TWO: THE EFFECT OF WASTE ON POPULATIONS</b>	
<b>7 Phytoplankton and controlling factors</b>	<b>91</b>
General seasonal pattern	92
Light effects on phytoplankton	93
Temperature effects on water-column stability and productivity	103
Temperature effects on phytoplankton growth rate	109
Summary of effects of temperature and light	116
Eutrophication	118
Characteristics related to lake trophic state	120
Criteria for the trophic state of lakes	121
Nutrient limitation and plankton growth	137
Nutrients and phytoplankton succession	150
Lake restoration	160
<b>8 Zooplankton</b>	<b>173</b>
Life cycle	173
Filtering and grazing	174

<i>Contents</i>	<i>ix</i>
Measurement	176
Zooplankton and eutrophication	176
Zooplankton and temperature	180
Study questions	181
<b>9 Periphyton</b>	<b>186</b>
Contribution to primary productivity	187
Methods of measurement	189
Factors affecting growth of periphyton	190
Periphyton community change as an index of waste type	204
Effect of toxicants	207
The question of nuisance	207
Study questions	210
<b>10 Macrophytes</b>	<b>212</b>
Habitats	212
Significance of macrophytes	213
Response to environmental factors	214
Controls for macrophytes	225
Study questions	228
<b>11 Benthic macroinvertebrates</b>	<b>230</b>
Sampling for benthic macroinvertebrates	232
Natural factors affecting community change	233
Oxygen as a factor affecting community change	236
Temperature	238
Effect of food supply on macroinvertebrates	243
Effects of toxic wastes	248
Effect of organic waste via eutrophication in lakes	249
Suspended sediment	251
Recovery	252
Assessment of water quality	255
Study questions	260
<b>12 Fish</b>	<b>262</b>
Dissolved oxygen criteria	262
DO, eutrophication, and fish	271
Fish and temperature	273
Temperature standards	281
Comments on standards	282
Toxicants and toxicity	286
Study questions	298
<b>Appendix A: Benthic macroinvertebrates</b>	<b>299</b>
<b>Appendix B: Answers to study questions</b>	<b>302</b>
<b>References</b>	<b>310</b>
<b>Index</b>	<b>329</b>
