Foreword by Jeffrey Gray	ix
Preface	xii
1 Introduction	1
The study of thirst and drinking	4
The causes of drinking	4
Measures of drinking	6
The pattern of drinking	8
2 Fundamentals of fluid intake and output	10
Water content of the body	10
Organization of the body fluids	11
Manipulating the fluid compartments	15
Measuring changes in the fluid compartments	16
Osmotic pressure or osmolality	16
Plasma sodium	16
Extracellular fluid volume	16
Plasma volume	17
Intracellular fluid volume	17
Gain and loss of body water	17
The kidney	19
Conclusions	21
3 The origins of thirst	23
The dry mouth theory	23
Thirst of general origin	27
Early studies of the central nervous system and thirst	29
Conclusions	30
4 The initiation of drinking	32
Cellular dehydration as a thirst stimulus	32
Localization of the osmoreceptors	34
Osmoreceptors in the central nervous system	36
Peripheral osmoreceptors	39
Summary – cellular dehydration as a thirst stimulus	40
Extracellular fluid depletion as a thirst stimulus	41
Angiotensin as a thirst stimulus	44
Cardiac receptors for thirst	60
Summary – Extracellular fluid depletion as a thirst stimulus	63
Ontogeny of the controls of drinking	64
The initiation of drinking following water deprivation	67

The effect of water deprivation on the cellular and extracellular fluid	67
Selective removal of the cellular or extracellular deficits	67
Summary – factors which initiate deprivation-induced drinking	75
5 The maintenance of drinking	76
The role of oropharyngeal, gastric and intestinal factors, and post-absorptive factors in the maintenance of drinking	76
How oropharyngeal factors may maintain drinking	80
Effects of palatability on drinking and body fluid homeostasis	83
Effects of variety on fluid intake	84
Conclusions	86
6 The termination of drinking	88
Introduction	88
The pattern of drinking	89
Systemic factors in the termination of drinking	90
How rapid is the restoration by drinking of body fluid deficits?	91
How effective are systemic changes in producing satiety?	94
Oropharyngeal factors in the termination of drinking	97
Gastric factors in the termination of drinking	101
Gastric distension	101
Pyloric cuff	102
Relief of gastric distension	103
Intestinal and hepatic–portal factors in the termination of drinking	105
The termination of drinking initiated by cellular and extracellular stimuli	108
Cellular stimuli	109
Extracellular stimuli	109
Conclusions	110
7 The neural control of drinking	112
Introduction	112
The location of central osmoreceptors for thirst	112
Neural systems for extracellular thirst	114
The lateral hypothalamus and preoptic area	115
Limbic and related structures	124
Conclusions	126
8 Pharmacology of drinking	128
Introduction	128
Cholinergic drinking	128
Adrenaline and noradrenaline	131
Dopamine	132
Summary	136

9 Problems of thirst and fluid balance	137
Examples of polydipsia	138
Diabetes mellitus and diabetes insipidus	138
Compulsive water drinking	141
Beer potomania	142
Symptoms of hyposmolality or hyponatraemia	142
Lithium treatment for manic-depressive psychosis	142
Renal hypertension	144
Congestive cardiac failure and thoracic caval constriction	146
Dehydration	147
Hypernatraemia	149
Conclusions	150
10 The control of normal drinking	152
Examples of drinking which is not in response to body fluid changes	153
Schedule-induced polydipsia (SIP)	153
Effects of flavour on drinking	154
Other oropharyngeal factors, including a dry mouth, and temperature	156
Learning and drinking	156
The interaction of feeding and drinking–anticipatory drinking	158
The termination of drinking	161
Is water deprivation-induced drinking in response to body fluid deficits?	161
Spontaneous drinking, with free access to water	161
Conclusions	164
Summary	166
11 Future directions	167
Measurements of body fluid parameters and plasma variables	167
Spontaneous drinking	167
Learning and strategy	169
Drinking in other species, including man	169
Mechanisms for drinking in response to extracellular thirst stimuli	170
Models of drinking	170
The neural control of drinking	170
References	171
Index	191
