

## INDEX

- Abelian groups  
 Basis theorem for, 360  
 definition, 6  
 invariant subgroups of, 161, 179  
 ring of endomorphisms of, 84  
 simple, 171
- Absorption Laws, in Boolean algebra, 317
- addition, of vectors, 227, 229
- additive order of an element in a ring, 64
- additive powers of an element  
 in a field, 96  
 in a ring, 62  
 in a ring with unity, 63
- adjugate matrix, 255
- affine geometry, 282–3
- affine group, 287–9
- affine space, 282
- affine transformations, 288
- algebra, Boolean, *see* Boolean algebra
- algebra of statements, 312–13  
 as a Boolean algebra, 322
- algebraic elements, over a field, 215
- algebraic extensions of a field, 214–18  
 as a vector space, 262
- algebraic structures, 3–4
- algebraic varieties  
 definition, 299  
 and ideals, 299  
 irreducible, 300
- algebraically closed fields, 223
- algorithm, *see* Euclid's algorithm *and*  
 division algorithm
- alternating group, 14  
 simple for degree  $\geq 5$ , 172
- angle, in a Euclidean vector space, 277
- angle, trisection of, 362
- Anti-symmetric law, for inclusion, 320
- arithmetic modulo  $p$ , 100
- ascending chain condition  
 for groups, 358, 366  
 for modules, 365
- associates, in an integral domain, 126  
 equivalence classes of, 127
- Associative Law  
 for Abelian groups, 6  
 for Boolean algebra, 315
- extension to more than three elements, for groups, 5
- extension to more than three elements, for rings, 59, 60
- for groups, 4
- for mappings, 30
- for rings, 58
- automorphisms  
 of fields, form a group, 104  
 of groups, 42  
 of groups, form a group, 50  
 of groups, inner, 46  
 of groups, inner as invariant subgroup of group of automorphisms, 166  
 of rings, 83  
 of rings, form a group, 84
- base  
 of a vector space, 233–6  
 of a vector subspace, 242
- basis theorem for Abelian groups, 360
- Boole, *The Laws of Thought*, 311
- Boolean algebra  
 algebra of statements as, 322  
 definition, 315  
 duality in, 316  
 inclusion in, 319–20  
 a lattice, conditions for being, 345  
 representation as algebra of sets, 337  
 set theory as, 321  
 statement of Laws, 318–19
- Boolean functions  
 conjunctive normal form, 328  
 definition, 323  
 disjunctive normal form, 325–8  
 truth tables for, 328
- bound, in a lattice, 343
- Cancellation Law  
 for Boolean algebra, 323  
 for fields, 95  
 for groups, 5  
 for rings, 60
- centre  
 of a group, 165

## 380

centre (*cont.*)  
 of a group, connection with inner automorphisms, 170  
 of a ring, 206  
 Ceva's theorem, 307  
 chain conditions, *see* ascending chain condition *and* descending chain condition  
 characteristic  
 of a field, 104–7  
 of a finite field, 108  
 of an integral domain, 139–40  
 of a ring, 65  
 circle  
 group of transformations of, 15  
 squaring the, 363  
 circuit theory, application of Boolean algebra to, 338–41  
 coefficient, in a polynomial, 72  
 column vector, 251  
 Commutative Law  
 for Abelian groups, 6  
 for Boolean algebra, 315  
 for groups, 6  
 of addition, necessity for in a ring, 58  
 commutative rings, 61  
 complement  
 in Boolean algebra, 315  
 in Boolean algebra, uniqueness, 317  
 of sets, 312  
 of statements, 313  
 complemented lattice, 345  
 complete disjunctive normal form, 326  
 completely ordered set, 342  
 complex  
 in a group, 20  
 invariant, 178  
 complex Euclidean geometry, 294  
 complex numbers  
 as algebraic extension of real field, 218  
 as a field, 98  
 fields of subsets of, 99  
 as a group, 9  
 as ordered pairs of real numbers, 209  
 as a ring, 66  
 as vector space over real field, 262  
 composition indices of a group, 358  
 composition series, 357  
 conclusion, in logic, 334  
 conjugacy classes  
 of elements of a group, 158  
 of subgroups, 159  
 conjugate elements in a group, 158  
 have same order, 159

## INDEX

conjugate subgroups, 159  
 conjunction, of statements, 313  
 conjunctive normal form, 328  
 contrapositive, 333  
 converse, 333  
 co-ordinate representation of a vector space, 237–9  
 cosets in a group, 21–3  
 as elements of the quotient group, 156  
 left and right coincide for invariant subgroup, 154  
 relative to kernel, 37  
 countable fields, classification of, 220–1  
 cross-ratio, 285  
 cube, duplication of, 362  
 cyclic groups, 10–11  
 homomorphisms of, 43  
 infinite, 10  
 quotient groups of, 162  
 degree of a polynomial, 72  
 De Morgan Laws, in Boolean algebra, 318  
 Desargue's theorem, 301, 307  
 descending chain condition  
 for groups, 358, 366  
 for modules, 365  
 difference group, 179  
 difference ring, 183  
 differentiation of polynomials, as linear transformation, 245  
 dihedral groups, 15  
 dimension  
 of a vector space, 236–7  
 of a vector subspace, 241  
 direct product of groups  
 definition, 17  
 projections, 45  
 invariant subgroups of, 170–1  
 direct sum of rings  
 definition, 69–71  
 is never a field, 70  
 ideals in, 186  
 is never an integral domain, 70  
 subrings of, 79  
 direct sum of vector spaces, 242  
 disjunction, of statements, 313  
 disjunctive normal form, 325–8  
 complete, 326  
 distance, in Euclidean vector spaces  
 275  
 Distributive lattice, 345  
 Distributive Law  
 for Boolean algebra, 315

- Distributive Law (*cont.*)  
 for Boolean algebra, proof by truth tables, 331  
 for lattice, 344–7  
 for rings, 58  
 for rings, extensions of, 60  
 domain, *see* integral domain  
 domain-homomorphisms, 123  
 dual vector space, 271  
 duality, principle of in Boolean algebra, 316  
 duplication of cube, 362
- elementary symmetric polynomials, 363  
 endomorphisms  
 of groups, 42  
 of groups, ring of, 84  
 of rings, 83  
 epimorphisms  
 of groups, 39  
 of rings, 82  
 equality of matrices, 248  
 equivalence classes theorem, 2  
 equivalence relations, 1  
 for associates in an integral domain, 127  
 for conjugacy between elements of a group, 158  
 for conjugacy between subgroups, 159  
 in definition of cosets in a group, 22  
 equivalent matrices, 272  
*Erlangen Program*, 286  
 Euclidean domain  
 definition, 135  
 of Gaussian integers, 141  
 of integers, 137  
 of polynomials over a field, 139  
 is a principal ideal domain, 192  
 is a unique factorisation domain, 135  
 Euclidean geometry, 273–82  
 Euclidean group, 289–91  
 Euclidean (vector) space  
 definition, 274  
 distance in, 275  
 length in, 275  
 orthonormal sets in, 277  
 Euclid's algorithm, in a Euclidean domain, 135  
 Euler's function  $\phi(n)$ , 12, 28  
 Extensions  
 algebraic, of a field, 214–18  
 finite fields as, 218–19  
 of the number system, 208  
 transcendental, 213–14
- factor group, 156  
 factor, in an integral domain, 125  
 factor theorem, 76  
 factorisation theory, in an integral domain, 128–36  
 faithful representation, 367–8  
 Fermat's theorem, 28  
 field  
 abstract definition, 93  
 countable, classification of, 220–1  
 examples, 98–102  
 factorisation theory trivial, 128  
 finite (Galois), 108–13  
 of fractions, of an integral domain, 210–13  
 has no proper ideals, 195  
 polynomials over, 138  
 root, 361  
 of scalars, in geometry, 294–5  
 of scalars, in a vector space, 229  
 splitting, 361  
 as a vector space, 239, 261–3  
 field-homomorphisms, 103–4  
 finite dimensional vector space  
 co-ordinate representation of, 237–9  
 definition, 234  
 finite fields, *see* Galois fields  
 finite integral domain, is a field, 122  
 fractions, field of, 210–13  
 Frobenius notation for subsets of a group, 19  
 full linear group, 287  
 functions  
 Boolean, *see* Boolean functions  
 polynomial, 75  
 rings of, 67–8  
 vector spaces of, 240  
 fundamental group, 369
- Galois fields, 108–13  
 additive structure of, 110–11  
 construction of  $GF[2^n]$  and  $GF[3^n]$ , 110,  
 definition of  $GF[p^n]$ , 109  
 as extensions, 218–19  
 multiplicative structure of, 111–13  
 as scalars in geometry, 295–7  
 as vector spaces, 262  
 Galois group of a polynomial, 361  
 Gaussian domain, 129  
*see also* unique factorisation domain  
 Gaussian integers  
 are a Euclidean domain, 141  
 as an integral domain, 140–1

## 382

- Gaussian integers (*cont.*)
  - as a ring, 66
  - units of, 140
- generators
  - for cyclic groups, 11
  - for groups, 18
  - for ideals, 189
- geometry
  - affine, *see* affine geometry
  - Euclidean, *see* Euclidean geometry
  - finite, 295–7
  - projective, *see* projective geometry
- Gram–Schmidt orthogonalisation process, 278
- group
  - abstract definition, 4
  - affine, 287–9
  - alternating, 14
  - of automorphisms of a group, 50
  - of automorphisms of a ring, 84
  - dihedral, 15
  - direct product, 17
  - Euclidean, 289–91
  - Euclidean, complex, 294
  - examples of, 9–17
  - full linear, 287
  - fundamental, 369
  - Galois, 361
  - homology, 371–3
  - indecomposable, 365
  - isomorphic, 40
  - isomorphisms of, 39–42
  - orthogonal, 290
  - of prime order, 24
  - projective, 286–7
  - quotient, *see* quotient group
  - simple, 171–3
  - soluble, 361
  - symmetric, 13
  - unitary, 295
- group-homomorphisms
  - definition, 33
  - examples of, 33–4, 42–7
  - the natural homomorphism, 166
  - product of, 47
  - quotient group associated with, 167–70
  - sets of, 47–51
  - sum of, 49
  - types of, 38–42
- highest common factor,
  - in an integral domain, 132–4
  - in a principal ideal domain, 190
- homology, 371–3

## INDEX

- homology groups, 371–3
- homomorphisms
  - of groups, *see* group-homomorphisms
  - as mappings which preserve structure, 31–3
  - of rings, *see* ring-homomorphisms
- homotopy, 369
- hyperplane, 292
- ideals
  - and algebraic varieties, 299
  - definition, 181
  - in direct sums, 186
  - examples, 184–6
  - in a field, 194–5
  - generated by subsets, 189
  - maximal, 198–202
  - primary, 365
  - prime, 197–8
  - prime, in connection with algebraic varieties, 300
  - principal, 186–92
  - in ring of integers, 185
  - in rings of residues, 185
  - trivial, 184
- Idempotent Laws, in Boolean algebra, 316
- identity
  - homomorphism of groups, 42, 48
  - homomorphism of rings, 83
  - linear transformation, 245
  - mapping, 30
  - matrix, 250
- image
  - of a group-homomorphism, 37
  - of a mapping, 30
  - of a ring-homomorphism, 82
- image space, of a mapping, 29
- implication
  - contrapositive of, 333
  - converse of, 333
  - definition, 333
  - inverse of, 333
- incidence
  - in a Euclidean vector space, 280–2
  - and simultaneous equations, 291–3
- inclusion, in Boolean algebra 319
  - laws of, 320
- indecomposable group, 365
- index, of a subgroup, 23
- Index Laws
  - for a field, 96–7
  - for a group, 8
  - for a ring, 63–5

- infinite cyclic group, 10
- infinite dimensional vector space, 234
- injection
  - for groups, 45
  - for rings, 83
- inner automorphisms, of a group,
  - definition, 46
  - group of, 166, 170
- inner product
  - definition, 274
  - in unitary space, 294
- integers
  - as extension of natural numbers, 208
  - as a group, 10
  - ideals in ring of, 185
  - as integral domain, 136–7
  - as a ring, 66
- integral domain
  - definition, 121
  - examples of, 123–4
  - Euclidean, 135
  - factorisation theory in, 128–36
  - field of fractions of, 210–13
  - finite, is a field, 122
  - highest common factor in, 132
  - ideals in, 189
  - polynomials over, 139
  - principal ideal domain, 190–2
  - unique factorisation domain (Gaussian), 129
- intersection
  - in a lattice, 343
  - of sets, 312
- intersection theory and simultaneous equations, 291–3
- invalid arguments, 335
  - example of, 336
- invariant complex, 178
- invariant subgroups
  - in an Abelian group, 161, 179
  - centre of a group is invariant, 165
  - condition for as union of conjugacy classes, 160
  - definition, 154
  - of direct products, 170–1
  - examples, 161–2
  - examples of non-invariant subgroups, 162–3
  - inner automorphisms form invariant subgroup of group of automorphisms, 166
  - kernel of homomorphism is invariant, 167
  - maximal, 178, 357
  - quotient group, 156
- inverse
  - in a field, 94
  - in a field, uniqueness of, 95
  - in a group, 4
  - in a group, image of under homomorphism, 35
  - in a group, uniqueness of, 5
  - of a group-homomorphism, 48
  - of an implication, 333
  - of a linear transformation, 254
  - of a mapping, 29
  - of a matrix, 254
  - of a matrix, calculation of, 255
  - of a product, in a group, 8
- involution, 31
- irreducible elements
  - in an integral domain, 127
  - in a polynomial domain, 138
- irreducible varieties, 300
- isometry, 290
- isomorphic groups, 40
- isomorphic rings, 83
- isomorphisms
  - of groups, definition, 39
  - of groups, examples of, 41–2, 46–7
  - of groups, identity, 48
  - of rings, 82
- Jordan–Hölder theorem, 357
- kernel
  - of a group-homomorphism, 36, 167
  - of a group-homomorphism, cosets relative to, 37
  - of a monomorphism, 39
  - of a ring-homomorphism, 82, 193
- Klein, *Erlangen Program*, 286
- Kronecker delta, 277
- Krull–Schmidt theorem
  - for groups, 366
  - for modules, 367
- Lagrange’s interpolation formula, 147
- Lagrange’s theorem, 23
  - applied to additive structure of a ring, 80
- lattice
  - complemented, 345
  - definition, 343
  - Distributive, 345
  - laws in, 343–4
  - union and intersection in, 343
  - unity and zero in, 344
- Laws of Thought, The*, 311
- left coset, in a group, 23

## 384

length of a vector  
 definition, 275  
 in terms of co-ordinates, 279

linear dependence  
 definition, 232  
 examples, 232–3

linear manifold, 243  
 in a Euclidean vector space, 280

linear mappings, 244

linear subspace  
 definition, 280  
 intersection theory of, 281

linear sum, of vector subspaces, 242

linear transformations  
 definition, 244  
 examples, 244–5  
 inverse of, 254  
 null space of, 251  
 nullity of, 252  
 product of, 245  
 range of, 251  
 rank of, 252  
 representation by matrix, 246–8  
 scalar product of, 245  
 sum of, 245

logical arguments, 334–7

lowest common multiple, in an integral domain, 147

mappings  
 definition, 29  
 inverse, 29  
 product of, 30

matrix  
 adjugate, 255  
 definition as representation of linear transformation, 247  
 equality of, 248  
 identity, or unit, 250  
 inverse of, 254–5  
 multiplication by scalar, 249  
 non-singular, 254  
 orthogonal, 291  
 product of, 249  
 rank of, 253  
 square, 250  
 sum of, 249  
 unitary, 295  
 vectors as, 251  
 zero, 250

maximal ideal, 198–202  
 always prime, 201

maximal invariant subgroup, 178, 357

modules  
 chain conditions for, 365

## INDEX

definition, 364  
 Krull–Schmidt theorem, 367

modus ponens, law of, 335

monomorphisms  
 of groups, 39  
 of rings, 82

multiplication  
 of vectors, 227  
 of vector by scalar, 227, 229

multiplication table, of a group, 7

multiplicative order of an element in a ring, 65

multiplicative powers of an element  
 in a field, 97  
 in a ring, 65

natural homomorphism  
 of a group, 166–7  
 of a ring, 192–4

negation, of statements, 313

negative of a vector, 229

negative element  
 for a field, 94  
 for a group, 7  
 for a ring, 58  
 for a ring, image of under homomorphism, 81  
 for a ring, uniqueness of, 59

neutral element, of a group, 4  
 image of under homomorphism, 35  
 uniqueness of, 5

 fields of subsets of, 98  
 as a group, 9  
 as a ring, 66  
 as vector space over rationals, 240

Reflexive Law  
 for inclusion, 320  
 for relations, 2

relations, equivalence, 1

remainder theorem, 76

representation theorem, the, 337

representations  
 of a group, 367  
 of a ring, 368

residue classes  
 as cyclic group under addition, 10–11  
 as a field if modulus is prime, 99  
 as group under multiplication, 11  
 ideals in rings of, 185  
 as a ring, 67  
 subrings of rings of, 79

right coset, in a group, 23

ring  
 abstract definition, 58  
 examples, 66–72  
 isomorphic, 83  
 of linear transformations of vector spaces, 246  
 Noetherian, 365  
 of polynomials, 72–7  
 quotient, *see* quotient ring  
 simple, 195–7  
 with unity, 61  
 with unity, additive powers of an element in, 63  
 vector space over, 263  
 zero-ring, 64

ring-homomorphisms  
 definition, 81  
 examples, 83–4  
 kernel is an ideal, 193  
 natural homomorphism, 192–4  
 types of, 82–3

**INDEX**

root field of a polynomial, 361

row vector, 251

scalars  
 in geometry, 294–5  
 in a vector space, 229

scalar multiplication  
 of linear transformations, 245  
 of matrices, 249

Schwarz's inequality, 276

self-conjugate element in a group, 158

self-conjugate subgroup, 154  
 reason for name, 160

set theory  
 as a Boolean algebra, 321  
 notation, 1

simple groups, 171–3  
 Abelian examples, 171  
 alternating groups as, 172

simple rings, 195–7

simultaneous equations  
 geometry of, 291–3  
 solution of, 256–61

skew field, 92, 114–15

soluble groups, 361

spanning set of vectors, 234

splitting field of a polynomial, 361

square matrices, 250

squaring the circle, 363

statement (or proposition)  
 algebra of, 312–13  
 definition, 312

stereographic projection, 308

structures, algebraic, 3–4

sub-domains, 123

subfields, 102–3

subgroups, 18–24  
 definition, 18  
 generated by subsets of elements, 19  
 of index 2 are invariant, 162  
 invariant, *see* invariant subgroups  
 proper or non-trivial, 18  
 of powers of an element, 19  
 trivial, 18

submodules, 364

subrings, 77–80  
 definition, 77  
 generated by subsets of elements, 78  
 of polynomial rings, 79  
 proper or non-trivial, 78  
 of rings of residues, 79  
 trivial, 78

subspaces, *see* vector subspaces

sum  
 direct, *see* direct sum

- sum (*cont.*)  
 of group-homomorphisms, 49  
 of group-homomorphisms for Abelian groups, 50  
 linear sum of vector subspaces, 242  
 of linear transformations, 245  
 of matrices, 249  
 of polynomials, 72  
 syllogism, law of, 335  
 Sylow's theorem, 359  
 symmetric groups, 13  
 symmetric law, for relations, 2  
 symmetric polynomials, 363
- tautology, 334  
 transcendental elements over a ring, 213  
 transcendental extensions  
 of a field, 214  
 of a ring, 213  
 as a vector space, 262  
 transformation groups, 14–17  
 transformations  
 affine, 288  
 linear, *see* linear transformations  
 orthogonal, 289  
 unitary, 295  
 Transitive Law  
 for inclusion, 320  
 for relations, 2  
 translations, 288  
 triangle inequality, 276  
 trisection of angle, 362  
 trivial homomorphism  
 of groups, 42  
 of rings, 83  
 trivial ideals, 184  
 trivial subgroups, 18  
 are invariant, 161  
 trivial subrings, 78  
 trivial vector space, 239  
 truth tables, 328–32
- union  
 in a lattice, 343  
 of sets, 311  
 unique factorisation domain (U.F.D.)  
 connection with H.C.F. theory, 133  
 definition, 129  
 Euclidean domain is a U.F.D. 135  
 integers are a U.F.D. 137  
 polynomials over a field are a U.F.D. 139  
 condition for polynomials over an integral domain to be a U.F.D. 139  
 prime ideals of, 198  
 principal ideal domain is a U.F.D. 192  
 unit matrix, 250  
 unitary group, 295  
 unitary matrix, 295  
 unitary (vector) space, 295  
 unitary transformations, 295  
 units  
 in an integral domain, 126  
 form a group, 126  
 in polynomial domains, 137  
 unity  
 in Boolean algebra, 314  
 in Boolean algebra, uniqueness of, 317  
 in a field, 94  
 in a field, uniqueness of, 95  
 in a lattice, 344  
 in a ring, 61
- valid arguments, 334–6  
 varieties, algebraic, *see* algebraic varieties  
 vectors  
 abstract definition, 229  
 algebraic properties of, 227  
 column, 251  
 as a group, 12  
 as a group, homomorphisms of, 44  
 as matrices, 251  
 quotient groups of, 162  
 row, 251  
 vector space  
 affine, 282  
 base of, 233–6  
 co-ordinate representation of, 237–9  
 dimension of, 236–7  
 Euclidean, 274–82  
 examples, 239–40  
 field as, 261–3  
 finite dimensional, 234  
 infinite dimensional, 234  
 inner product in, 274  
 linear dependence in, 231–3  
 of linear transformations of  $V$  into  $W$ , 245  
 projective, 283  
 over a ring, 263  
 spanning set of, 234  
 unitary, 295  
 vector subspaces, 240–3  
 intersection of, 242  
 linear, 280
