Table of Contents

[More information](#)**CONTENTS***Preface* *page x***1 GROUPS**

1.1 Introduction—equivalence relations	1
1.2 Algebraic structures	3
1.3 Groups	4
1.4 Standard examples of groups	9
1.5 Transformation groups	14
1.6 Direct products	17
1.7 Generators	18
1.8 Subgroups	18
1.9 Cosets and Lagrange's theorem	21
Worked exercises	24
Exercises 1A	25
Exercises 1B	27

**2 HOMOMORPHISMS OF GROUPS**

2.1 Mappings	29
2.2 Mappings which preserve structure: homomorphisms	31
2.3 The kernel and the image of a homomorphism	36
2.4 Types of homomorphism	38
2.5 Examples of homomorphisms	42
2.6 Sets of homomorphisms and their algebra	47
2.7 Groups of automorphisms	50
Worked exercises	51
Exercises 2A	53
Exercises 2B	55

**3 RINGS**

3.1 Definition of a ring	56
3.2 Elementary results	59
3.3 Basic types of rings	60
3.4 The additive and multiplicative structures of a ring	62
3.5 Examples of rings	66

Cambridge University Press

vi	CONTENTS	
3.6	Polynomial rings	<i>page</i> 72
3.7	Subrings	77
3.8	Ring-homomorphisms	80
3.9	The ring of endomorphisms of an Abelian group	84
	Worked exercises	85
	Exercises 3A	87
	Exercises 3B	90
<b>4</b>	<b>FIELDS</b>	
4.1	Definition of a field	92
4.2	Elementary properties	94
4.3	Examples of fields	98
4.4	Subfields	102
4.5	Field homomorphisms	103
4.6	The characteristic of a field	104
4.7	Prime fields	107
4.8	Finite fields	108
4.9	Skew fields	114
	Worked exercises	115
	Exercises 4A	116
	Exercises 4B	118
<b>5</b>	<b>INTEGRAL DOMAINS</b>	
5.1	Definition and elementary properties	120
5.2	Examples	123
5.3	Factors, units and prime elements	124
5.4	Prime factorisation	128
5.5	The integers	136
5.6	Domains of polynomials	137
5.7	The characteristic of an integral domain	139
5.8	Gaussian integers	140
	Worked exercises	142
	Exercises 5A	144
	Exercises 5B	146
<b>6</b>	<b>INVARIANT SUBGROUPS</b>	
6.1	Description of the problem	148
6.2	Invariant subgroups	153
6.3	Quotient groups	156

Cambridge University Press

<b>CONTENTS</b>		<b>vii</b>
6.4	Conjugacy	<i>page</i> 158
6.5	Examples of invariant subgroups	161
6.6	The centre of a group. Inner automorphisms	165
6.7	The natural homomorphism	166
6.8	The quotient group associated with a given homomorphism	167
6.9	Direct products	170
6.10	Simple groups	171
	Worked exercises	173
	Exercises 6A	176
	Exercises 6B	177
<b>7</b>	<b>IDEALS</b>	
7.1	Invariant subgroups of an Abelian group	179
7.2	Ideals	180
7.3	Quotient rings	182
7.4	Examples of ideals	184
7.5	Principal ideals	186
7.6	The natural homomorphism	192
7.7	Ideals in a field	194
7.8	Simple rings	195
7.9	Prime ideals	197
7.10	Maximal ideals	198
	Worked exercises	202
	Exercises 7A	203
	Exercises 7B	206
<b>8</b>	<b>EXTENSIONS OF STRUCTURES</b>	
8.1	Introduction and examples	207
8.2	The field of fractions of an integral domain	210
8.3	Transcendental extensions	213
8.4	Algebraic extensions of a field	214
8.5	Finite fields as extensions	218
8.6	The general countable field	220
	Worked exercises	221
	Exercises 8A	222
	Exercises 8B	223

**9 VECTOR SPACES**

9.1	Introduction	<i>page</i> 225
9.2	Algebraic properties of vectors	227
9.3	Abstract vector spaces	228
9.4	Linear dependence	231
9.5	Bases	233
9.6	Dimension of a vector space	236
9.7	Co-ordinate representation	237
9.8	Examples of vector spaces	239
9.9	Subspaces	240
9.10	Linear manifolds	243
9.11	Linear transformations	244
9.12	Representation of a linear transformation by a matrix	246
9.13	The range and null space of a linear transformation	251
9.14	Inverse transformations	254
9.15	Solution of simultaneous equations	256
9.16	Fields as vector spaces	261
9.17	Vector spaces over rings	263
	Worked exercises	263
	Exercises 9A	267
	Exercises 9B	270

**10 GEOMETRICAL APPLICATIONS**

10.1	Euclidean geometry	273
10.2	Affine geometry	282
10.3	Projective geometry	283
10.4	Transformations in geometry	285
10.5	Simultaneous equations and geometry	291
10.6	The field of scalars in a geometry	294
10.7	Finite geometries	295
10.8	Algebraic varieties and ideals	297
	Worked exercises	301
	Exercises 10A	303
	Exercises 10B	307

## CONTENTS

ix

**11** BOOLEAN ALGEBRA

11.1	Introduction—the algebra of sets and the algebra of statements	<i>page</i> 311
11.2	Boolean algebra: its definition and basic laws	314
11.3	Simple consequences	321
11.4	Boolean functions and their normal forms	323
11.5	Truth tables	328
11.6	Implication and logical arguments	332
11.7	The representation theorem	337
11.8	Application to circuit theory	338
11.9	Application to probability theory	341
11.10	Lattices	342
	Worked exercises	345
	Exercises 11 A	348
	Exercises 11 B	351

**12** FURTHER RESULTS

12.1	Introduction	354
12.2	The isomorphism theorems	354
12.3	Composition series: the Jordan–Hölder theorem	356
12.4	Sylow groups	358
12.5	The basis theorem for Abelian groups	359
12.6	Galois theory: the insolubility of the general quintic	360
12.7	Ruler and compass constructions	362
12.8	Symmetric polynomials	363
12.9	Modules	364
12.10	The Krull–Schmidt theorem	365
12.11	Representations of groups and rings	367
12.12	Algebraic topology	368

*Answers to Exercises* 374*Index* 379
